Philosophy Of Technology In Spanish Speaking Countries:

Philosophy of Technology in Spanish Speaking Countries Carl Mitcham, 2012-12-06 This volume grew out of the experience of the First Inter American Congress on Philosophy of Technology October 1988 organized by the Center for the Philosophy and History of Science and Technology of the University of Puerto Rico in Mayagüez The Spanish language proceedings of that conference have been published in Carl Mitcham and Margarita M Peiia Borrero with Elena Lugo and James Ward eds *El nuevo mundo de la filosofía y la tecnología* a University Park PA STS Press 1990 This volume contains thirty two papers twenty two summaries an introduction and biographical notes to provide a full record of that seminal gathering Discussions with Paul T Durbin and others including many who participated in the Second Inter American Congress on Philosophy of Technology University of Puerto Rico in Mayagüez March 199 raised the prospect of an English language proceedings in the Philosophy and Technology series But after due consideration it was agreed that a more general volume was needed to introduce English speaking readers to a growing body of literature on the philosophy of technology in the Spanish speaking world As such the present volume includes Spanish as well as Latin American authors historical and contemporary figures some who did and many who did not participate in the first and second inter American congresses

Spanish Philosophy of Technology Belén Laspra, José Antonio López Cerezo, 2018-01-25 This volume features essays that detail the distinctive ways authors and researchers in Spanish speaking countries express their thoughts on contemporary philosophy of technology Written in English but fully capturing a Spanish perspective the essays bring the views and ideas of pioneer authors and many new ones to an international readership Coverage explores key topics in the philosophy of technology the ontological and epistemological aspects of technology development and innovation and new technological frontiers like nanotechnology and cloud computing In addition the book features case studies on philosophical queries Readers will discover such voices as Miguel ngel Quintanilla and Javier Echeverr a who are main references in the current landscape of philosophy of technology both in Spain and Spanish speaking countries Jos Luis Luj n who is a leading Spanish author in research about technological risk and Emilio Mu oz former head of the Spanish National Research Council and an authority on Spanish science policy The volume also covers thinkers in American Spanish speaking countries such as Jorge Linares an influential researcher in ethical issues Judith Sutz who has a very recognized work on social issues concerning innovation Carlos Osorio who focuses his work on technological determinism and the social appropriation of technology and Diego Lawler an important researcher in the ontological aspects of technology

Philosophy of Technology in Spanish Speaking Countries Carl Mitcham, 1962-01-01 **Science, Technology and Society** Wenceslao J. González, 2005 The emphasis on the realm of Science Technology and Society or Science and Technology Studies may have the same degree of relevance that the historical turn had in the past It is a social turn which affects philosophy of science as well as philosophy of technology It includes a new vision of the aims processes and results of scientific activities and

technological doings because the focus of attention is on several aspects of science and technology which used to be considered as secondary or even irrelevant This turn highlights science and technology as social undertakings rather than intellectual contents According to this new vision there are several important changes as to what should be studied the objects of research how it should be studied the method and what the consequences for those studies are The new focus of attention can be seen in many changes and among them are several of special interest a from what science and technology are in themselves mainly epistemic contents to how science and technology are made largely social constructions b from the language and structure of basic science to the characteristics of applied science and the applications of science c from technology as a feature through which human beings control their natural surroundings a step beyond technics due to the contribution of science to technology as a social practice and an instrument of power and d from the role of internal values necessary for mature science and innovative technology to the role of contextual or external values cultural political economic of science and technology Wenceslao J Gonzalez is professor of logic and philosophy of science at the University of A Coru a Spain He has been vicedean of the School of Humanities and president of the Committee of Doctoral Programs at the University He has been a visting researcher at the Universities of St Andrews M nster and London London School of Economics as well as Visiting fellow at the Center for Philosophy of Science University of Pittsburgh He has given lectures at the Universities of Pittsburgh Stanford Quebec and Helsinki The conferences in which he has participated include those organized by the Universities of Uppsala New South Wales Bologne and Canterbury New Zealand He has edited 20 volumes and published 70 papers He is the editor of the monographic issues on Philosophy and Methodology of Economics 1998 and Lakatos s Philosophy Today 2001 His writings include Economic Prediction and Human Activity An Analysis of Prediction in Economics from Action Theory 1994 On the Theoretical Basis of Prediction in Economics 1996 Rationality in Economics and Scientific Predictions A Critical Reconstruction of Bounded Rationality and its Role in Economic Predictions 1997 Lakatos s Approach on Prediction and Novel Facts 2001 Rationality in Experimental Economics An Analysis of R Selten s Approach 2003 From Erkl renVerstehen to PredictionUnderstanding The Methodological Framework in Economics 2003 and The Many Faces of Popper s Methodological Approach to Prediction 2004

Science, Technology, and Latin American Narrative in the Twentieth Century and Beyond Jerry Hoeg, 2000 This book seeks to elucidate both the historical and the present responses of a technologically dependent culture to the discourse of science and technology as these responses are represented in its literature Additionally the book endeavors to analyze the mutual influences of science technology and literature in order to ascertain the degree to which literature does serve and might serve to transform the roles of technology in Latin American society

BOOK JACKET

Epistemology and the Social, 2015-06-29 Epistemology had to come to terms with the social on two different occasions The first was represented by the dispute about the epistemological status of the social sciences and in this case the already well established epistemology of the natural sciences seemed to have the right to

dictate the conditions for a discipline to be a science But the social sciences could successfully vindicate the legitimacy of their specific criteria for scientificity More recently the impact of social factors on the construction of our knowledge including scientific knowledge has reversed in a certain sense the old position and promoted social inquiry to the role of a criterion for evaluating the purport of cognitive including scientific statements But this has undermined the traditional characteristics of objectivity and rigor that seem constitutive of science Moreover in order to establish the real extent to which social conditionings have an impact on scientific knowledge one must credit sociology with a sound ground of reliability and this is not possible without a preliminary epistemological assessment These are some of the topics discussed in this book both theoretically and with reference to concrete cases **Technology and Values** Kristin

Shrader-Frechette, Laura Westra, 1997-10-30 Technology and Values provides a highly useful collection of essays organized around issues related to science technology public health economics the environment and ethical theory The editors present effective introductions that provide background information as well as philosophical tools and case studies to facilitate understanding of the variety of issues emanating from the most significant developments in technology including the effects on privacy of the widespread use of computers to store and retrieve personal information and the ethical considerations of genetic engineering **The Reality of the Unobservable** E. Agazzi, M. Pauri, 2013-04-17 Observability and Scientific

Realism It is commonly thought that the birth of modern natural science was made possible by an intellectual shift from a mainly abstract and speculative conception of the world to a carefully elaborated image based on observations There is some grain of truth in this claim but this grain depends very much on what one takes observation to be In the philosophy of science of our century observation has been practically equated with sense perception This is understandable if we think of the attitude of radical empiricism that inspired Ernst Mach and the philosophers of the Vienna Circle who powerfully influenced our century's philosophy of science However this was not the attitude of the founders of modern science Galileo for example expressed in a famous passage of the Assayer the conviction that perceptual features of the world are merely subjective and are produced in the anima by the motion and impacts of unobservable particles that are endowed uniquely with mathematically expressible properties and which are therefore the real features of the world Moreover on other occasions when defending the Copernican theory he explicitly remarked that in admitting that the Sun is static and the Earth turns on its own axis reason must do violence to the sense and that it is thanks to this violence that one can know the true constitution of the universe *Foundations of Meta-technics* Ernesto Mayz Vallenilla, 2004 The Foundations of Meta

Technics is a rigorous phenomenological analysis of the transcendence of anthropomorphic anthropocentric and geocentric technology in terms of the new meta technical forms of space and time The book draws out the epistemological and ontological implications of an emerging meta technical supernature in which space and time are perceived by trans human means and from trans terrestrial perspectives This book is especially valuable to philosophers in either the phenomenological

or continental tradition **The Cumulative Book Index** ,1995 A world list of books in the English language *Beyond Imported Magic* Eden Medina,Ivan da Costa Marques,Christina Holmes,2014-08-15 Studies challenging the idea that technology and science flow only from global North to South The essays in this volume study the creation adaptation and use of science and technology in Latin America They challenge the view that scientific ideas and technology travel unchanged from the global North to the global South the view of technology as imported magic They describe not only alternate pathways for innovation invention and discovery but also how ideas and technologies circulate in Latin American contexts and transnationally The contributors explorations of these issues and their examination of specific Latin American experiences with science and technology offer a broader more nuanced understanding of how science technology politics and power interact in the past and present The essays in this book use methods from history and the social sciences to investigate forms of local creation and use of technologies the circulation of ideas people and artifacts in local and global networks and hybrid technologies and forms of knowledge production They address such topics as the work of female forensic geneticists in Colombia the pioneering Argentinean use of fingerprinting technology in the late nineteenth century the design use and meaning of the XO Laptops created and distributed by the One Laptop per Child Program and the development of nuclear energy in Argentina Mexico and Chile Contributors Pedro Ignacio Alonso Morgan G Ames Javiera Barandiar n Jo o Biehl Anita Say Chan Amy Cox Hall Henrique Cukierman Ana Delgado Rafael Dias Adriana D az del Castillo H Mariano Fressoli Jonathan Hagood Christina Holmes Matthieu Hubert Noela Invernizzi Michael Lemon Ivan da Costa Marques Gisela Mateos Eden Medina Mar a Fernanda Olarte Sierra Hugo Palmarola Tania P rez Bustos Julia Rodriguez Israel Rodr guez Giralt Edna Su rez D az Hern n Thomas Manuel Tironi Dominique Vinck Catching Time Isabelle Wentworth,2024-03-18 Time travels in divers paces with divers people Shakespeare s oft quoted line contains a hidden ambiguity not only do individual people experience time differently but time travels in diverse paces when we are with diverse persons The line articulates a contemporary understanding of subjective time it is changed by interaction with our social environment Interacting with other people and even literary characters can slow or quicken the experience of time Interactive time and the paradigm of enactive cognition in which it sits calls for an expansion of traditional ideas of time in narrative The first book length study of interactive time in narrative *Catching Time* explains how lived time and narrative time interpenetrate each other so that the relational model of subjective time acts as a narrative function *Catching Time* develops a novel interdisciplinary framework drawing on cognitive science narratology and linguistics to understand the patterns of temporality that shape narrative

Science and Ethics Evandro Agazzi,Fabio Minazzi,2008 Philosophy of science used to be identified with the logical and methodological analysis of scientific theories and any allusion to values was considered as a deplorable intromission in a philosophical investigation that should remain strictly epistemological As a reaction against this view an opposite sociological approach downplayed the usual virtues of scientific knowledge such as logical rigor and empirical adequacy as artificial

imageries that cover the actual nature of science that is a social product submitted to all the kinds of social conditionings and compromises A more balanced view is badly needed today when technoscience is permeating all aspects of our civilization and wise persons understand that we cannot survive without using science and technology but at the same time we need to steer their development in view of the real benefit of humankind We must investigate how science technology and values are legitimately interconnected and in particular how the discourses of ethics politics and religion can enter a fruitful dialogue with science The essays presented in this volume offer a valuable contribution to this interdisciplinary study **Index of Conference Proceedings** ,1994 Women Philosophers on Economics, Technology, Environment, and Gender History Ruth Edith Hagengruber,2023-08-21 In times of current crisis the voices of women are needed more than ever The accumulation of war and environmental catastrophes teaches us that exploitation of people and nature through violent appropriation and enrichment for the sake of short term self interest exacts its price This book presents contributions on the currently most relevant and most urgent issues reshaping the economy environmental problems technology and the re reading of history from the non western and western tradition With an outlook into the problems of class race and gender in its intersectional framing the collection offers a unique overview of current research in these fields and contributes to the renewal and contemporary presentation of feminist thought from partly concrete perspectives with regard to factual issues International Bibliography of Book Reviews of Scholarly Literature Chiefly in the Fields of Arts and Humanities and the Social Sciences ,1996 HOW TO ACQUIRE BOOKS LISTED IN CURRENT CONTENTS ,1996 **New Titles in Bioethics** ,1996 Superando fronteras Stephen H.
