

William James

- William James was an original thinker in and between the disciplines of physiology, psychology and philosophy. His twelve-hundred page masterwork, *The Principles of Psychology* (1890), is a rich blend of physiology, psychology, philosophy, and personal reflection that has given us such ideas as "the stream of thought" and the baby's impression of the world "as one great blooming, buzzing confusion" (PP 462). It contains seeds of pragmatism and phenomenology, and influenced generations of thinkers in Europe and America, including Edmund Husserl, Bertrand Russell, John Dewey, and Ludwig Wittgenstein.
