**Philosophy and the Many Faces of Science** Dionysios Anapolitanos, Aristeidēs Baltas, Stavroula Tsinorema, 1998 This collection of original papers by an international group of distinguished philosophers of science impressively demonstrates the links among the philosophic points of view areas of focus and methods of treatment used in examining the many facets of scientific inquiry It will be an indispensable collection for philosophers of science and scientists of various disciplines including physicists neuroscientists and psychologists *Columbia Companion to Twentieth-Century Philosophies* Constantin V. Boundas, 2007 *Columbia Companion to Twentieth Century Philosophies* is the first guide to cover both the Anglo American analytic and European continental traditions Organized thematically the volume thoroughly discusses the major movements and fields of each tradition and features the contributions of highly distinguished specialists in their fields

This book is divided into three sections. The first is devoted to highlighting the multidimensional work of philosophers identified with the analytic tradition with Nicholas Rescher writing on neoidealism, Josephine Donovan commenting on feminist philosophy, Tyler Burge discussing the philosophy of language and mind, and Robert Hanna reflecting on Kant's legacy. The second section presents the thought of those who identified themselves with the continental tradition, featuring Jean Grondin on hermeneutics, Leonard Lawlor on phenomenology, Charles Scott on postmodernism, and Babette Babich on the philosophy of science. This volume also covers logical positivism, naturalism, pragmatism, aesthetics, existentialism, Marxism, the Frankfurt School, structuralism, psychoanalysis, political philosophy, ethics, and the philosophy of religion. The final section addresses concurrent trends in Indian, Chinese, Japanese, and African philosophy and a comprehensive introduction by the editor not only provides a thorough outline of the problems and issues of the analytic and continental traditions but also boldly challenges the conviction that the two approaches must be rivals.

**Columbia Companion to Twentieth Century Philosophies** is an invaluable overview of the ideas that have shaped a monumentally important century in the history of philosophy, offering an unusually panoramic perspective that allows readers to form their own interpretations of original materials.

**Writing Computer and Information History** William Aspray, 2024-05-14. This is not a book about the history of computing or the history of information. Instead, it is a meta-historical book about the research and writing of these types of history. The formal presentation of historical research in the form of a publication often hides the process by which the topic was selected, boundaries were drawn, evidence was selected, an analytic approach was chosen, and applied results were presented. How this work fits into a larger body of scholarship, the implicit goals and biases of the author, and many other similar issues. This process of learning about the various ways to carry out computer history or information history can be enriched by this collection of reflective essays by experienced scholars discussing the craft that they practice. This is a book that concerns both computer history and information history. The first scholarship in computer history by professionally trained scholars began to appear in the 1970s, so we are approaching a half-century of research and publication in this area. The field has generated numerous pieces of exemplary scholarship from various perspectives, such as intellectual history of individual technologies, business histories of firms, economic histories of market sectors, externalist histories of funding and professionalization, and so on. However, the field continues to evolve, especially as computing and communication technologies have drawn together in the form of the Internet and social media, and with them, a new set of scholars is participating, drawn not only from the history of science and technology but also from the communication and media studies fields. Powerful theories, approaches, and frameworks are being increasingly drawn more widely from both the humanities and the social sciences to inform the practice of computer history. The scholars in this volume look at what's happened, what's happening now, and where historical scholarship in these disciplines is headed.

**The Many Faces of Biblical Humor** David A. Peters, 2007-11-06. **The Many Faces of Biblical Humor** examines how the Bible writers intentionally used humor, irony, and

sarcasm to argue their points concisely This work begins with the dysfunctional families of Genesis continues delightfully through every book of the Bible and ends with a glorious fulfillment in Revelation Along the way the reader is presented humorous stories pathetically funny characters and poignant quips and quotes from prophets poets and principals The author paraphrases each biblical text in an engaging prose that highlights the humor of that passage humor that may not have been previously noted by the reader Between the paraphrases the author sets the historical and linguistic setting allowing the reader to see how the humor and puns of the text enrich the biblical understanding of God's message Also included are applications of these marvelous passages to our daily lives as we see our own foibles portrayed in the biblical characters In many ways this is a Bible commentary with an accent on the humorous In another sense it is simply a delightful book that makes the Bible come alive through the latent humor of its characters and their stories This revised edition contains corrections of typographical errors in the first edition as well as some clarifying material to make the humor more enjoyable For more information visit the author's website

Words and Distinctions for the Common Good Gabriel Abend, 2023-07-25 How social scientists disagreements about their key words and distinctions have been misconceived and what to do about it Social scientists do research on a variety of topics gender capitalism populism and race and ethnicity among others They make descriptive and explanatory claims about empathy intelligence neoliberalism and power They advise policymakers on diversity digitalization work and religion And yet as Gabriel Abend points out in this provocative book they can't agree on what these things are and how to identify them How to tell if something is a religion or a cult or a sect What is empathy What makes this society a capitalist one Disputes of this sort arise again and again in the social sciences Abend argues that these disagreements have been doubly misconceived First they conflate two questions how a social science community should use its most important words and what distinctions it should accept and work with Second there's no fact of the matter about

either. Instead they re practical reason questions for a community which aim at epistemically and morally good outcomes. Abend calls on social science communities to work together on their words distinctions and classifications. They must make collective decisions about the uses of words, the acceptability of distinctions and the criteria for assessing both. These decisions aren't up to individual scholars; the community gets the last word. According to Abend, the common good, justice and equality should play a significant role in the logic of scientific research. Gabriel Abend is professor of sociology at University of Lucerne and the author of *The Moral Background: An Inquiry into the History of Business Ethics* (Princeton).

*Deconstruction and the 'Unfinished Project of Modernity'* Christopher Norris, 2020-11-25 Through a close engagement with some key thinkers, Norris argues that deconstruction is part of the unfinished project of modernity, a project whose interest and values it upholds by continuing to question them in a spirit of enlightened self-critical inquiry. **Realism**

*Discourse and Deconstruction* Jonathan Joseph, John Michael Roberts, 2004-05-05 The book addresses such issues as the work of Derrida and deconstruction, discourse theory, Eurocentrism and poststructuralism. **The Elusive Synthesis: Aesthetics and Science** A.I. Tauber, 2012-12-06 The tension between art and science may be traced back to the Greeks. What became natural philosophy and later science has traditionally been posed as a fundamental alternative to poetry and art. It is a theme that has commanded central attention in Western thought as it captures the ancient conflict of Apollo and Dionysus over what deserves to order our thought and serve as the aspiration of our cultural efforts. The modern schism between art and science was again clearly articulated in the Romantic period and seemingly grew to a crescendo fifty years ago as a result of the debate concerning atomic power. The discussion has not abated in the physical sciences and in fact has dramatically expanded most prominently into the domains of ecology and medicine. Issues concerning the role of science in modern society, although heavily political, must be regarded at heart as deeply embedded in our cultural values. Although each generation addresses them anew, the philosophical problems which lay at the foundation of these fundamental concerns always appear fresh and difficult. This anthology of original essays considers how science might have a greater commonality with art than was perhaps realized in a more positivist era. The contributors are concerned with how the aesthetic participates in science, both as a factor in constructing theory and influencing practice. The collection is thus no less than a spectrum of how Beauty and Science might be regarded through the same prism. **Science and the Quest for Reality** Alfred I. Tauber, 2016-07-27 Science and the Quest for Reality is an interdisciplinary anthology that situates contemporary science within its complex philosophical, historical and sociological contexts. The anthology is divided between firstly characterizing science as an intellectual activity and secondly defining its social role. The philosophical and historical vicissitudes of science's truth claims has raised profound questions concerning the role of science in society beyond its technological innovations. The deeper philosophical issues thus complement the critical inquiry concerning the broader social and ethical influence of contemporary science. In the tradition of the Main Trends of the Modern World series, this volume includes both classical and

contemporary works on the subject      *Realism with a Human Face* Hilary Putnam, 1992 One of America's great philosophers says the time has come to reform philosophy Putnam calls upon philosophers to attend to the gap between the present condition of their subject and the human aspirations that philosophy should and once did claim to represent His goal is to embed philosophy in social life      *Contact with Reality* Esther Lightcap Meek, 2017-05-05 Is knowledge discovered or just invented Can we ever get outside ourselves to know how reality is in itself independent of us Philosophical realism raises the question whether in our knowing we connect with an independent reality or only connect with our own mental constructs Far from being a silly parlor game the question impacts our lives concretely and deeply Modern Western culture has been infected with antirealism and the doubt skepticism subjectivism relativism and atheism that attends it not to mention distrust and arbitrary mis use of reality Premier scientist turned philosopher Michael Polanyi stepped aside from research to offer an innovative account of knowing that takes its cue from how discovery actually happens Polanyi defied the antirealism of the twentieth century sounding a ringing note of hope in his repeated claim that in discovery we know we have made contact with reality because we have a sense of the possibility of indeterminate future manifestations And that sense marks contact with reality because it is the way reality is abundant generous and fraught with as yet unnameable possibilities This book examines that distinctive claim contrasting it to the wider philosophical discussions regarding realism and antirealism in the recent decades It shows why Polanyi's outlook is superior and why that matters not just to scientific discoverers but to us all

**Science Reason Rhetoric** Henry Krips, J.E. McGuire, Trevor Melia, 2017-03-13 This volume from the Pittsburgh Konstanz series marks a unique collaboration by internationally distinguished scholars in the history rhetoric philosophy and sociology of science Converging on the central issues of rhetoric of science the essays focus on figures such as Galileo Harvey Darwin von Neumann and on issues such as the debate over cold fusion or the continental drift controversy Their vitality attests to the burgeoning interest in the rhetoric of science
