The Global Social Sciences Michael Kuhn, Hebe Vessuri, 2016-10-11 The European social sciences tend to absorb criticism of their approach and re label it as a part of what the critique opposes thus criticism of European social sciences by subaltern social sciences their talking back has become a frequent line of reflection

The relabeling of the critique of the European approach as a critique from Southern social sciences of Western social sciences has in effect turned Southern as well as Western social sciences into competing contributors to the same globalizing social sciences. Both are no longer arguing about the European approach to social sciences but about which social thought from which part of the globe should prevail. If the critique becomes a part of what it opposes, one might conclude that the European social sciences are very adaptable and capable of learning. One might however also raise the question whether there is anything wrong with the criticism of the European social sciences or for that matter whether there is anything wrong with the European social sciences themselves. The contributions in this book discuss these questions from different angles. They revisit the mainstream critique of the European social sciences and they suggest new arguments criticizing social science theories that may be found as often in the Western as in the Southern discourse.

Social Emergence in International Relations Maren Wagner, 2016-10-03 This book presents a conceptualization of social emergence in international relations as a novel angle to analyse institutional dynamics in East Asia, introducing the concept of emergence from a critical realist perspective. The author examines East Asia's characteristic mesh work of regional institutions that affect integrative processes and regional policies, exploring how such institutions emerge and acquire their own nature and why this pattern persists over time, an unresolved and contested subject in the field of International Relations. This book suggests that regional institutions are emergent entities of the international system that arise as forms of self-organization by states to achieve certain emergent properties and powers. The author's approach sheds light on the particular emergent properties and powers of regional institutions and identifies discourse as a key mechanism of social emergence. Besides engaging in relevant questions of the philosophy of science and its methodological implications for studying social emergence in world politics, the book also analyses the concrete case of two East Asian regional institutions: ASEAN Plus Three and the East Asia Summit. This book will engage scholars and postgraduate students of Asian Studies and International Relations.

Written by the new generation of sociologists these essays chart a course for the future of the discipline both by revisiting forgotten theories and methods and by suggesting innovative theoretical and methodological approaches Comprised of seven essays on theory and five on methodology the volume also attempts to reconnect theorists and methodologists in a discussion about the future of the sociological enterprise *Conscience and Cognition in Social Research* Zhang Qingxiong,2023-04-07
This book is a critical examination of the different roles of conscience and cognition in social research in China and the West exploring how the two traditions can enrich each other and help societies navigate through the complex intellectual and moral crises of our time Drawing on a rich array of primary and secondary sources this title traces the development of the Confucian conception of conscience from Confucius and Mencius to Xiong Shili and Mou Zongsan two representatives of Neo Confucianism This primacy of a moral sense is compared and contrasted with the tension within the Western culture between strains that place a premium on understanding and a deep commitment to the search for meaning in such philosophers as Habermas and Heidegger The author explicates why such a commitment is essential to social research and how the focus on instrumental rationality that has defined modernity may be corrected by recentering the role of conscience on intellectual inquiry in general To that end both Chinese and Western cultures have plenty to offer both in terms of substantive insights and research methodologies The book will be a crucial reference for scholars and students interested in Western philosophy comparative philosophy and Chinese philosophy *Bibliography of Social Science Periodicals and Monograph Series: Poland* United States.
