community     Principles of Clinical Phonology Martin J. Ball, 2015-10-08 Those working on the description of disordered speech are bound to be also involved with clinical phonology to some extent This is because interpreting the speech signal is only the first step to an analysis Describing the organization and function of a speech system is the next step However it is here that phonologists differ in their descriptions as there are many current approaches in modern linguistics to undertaking phonological analyses of both normal and disordered speech Much of the work in theoretical phonology of the last fifty years or so is of little use in either describing disordered speech or explaining it This is because the dominant theoretical approach in linguistics as a whole attempts elegant descriptions of linguistic data not a psycholinguistic model of what speakers do when they speak The latter is what is needed in clinical phonology In this text Martin J Ball addresses these issues in an investigation of what principles should underlie a clinical phonology This is not however simply another manual on how to do phonological analyses of disordered speech data though examples of the application of various models of phonology to such data are provided Nor is this a guide on how to do therapy though a chapter on applications is included Rather this is an exploration of what theoretical underpinnings are best suited to describing classifying and treating the wide range of developmental and acquired speech disorders encountered in the speech language pathology clinic     Rehabilitative Audiology Jerome G. Alpin, Patricia A. McCarthy, 2000 Rehabilitative Audiology Children and Adults balances theory with practical applications that demonstrate how rehabilitative principles work in the clinical setting Completely revised the Third Edition of this popular text offers a large number of tables appendices and illustrations making the material easier to learn and retain The content is organized to highlight various areas of concern and new advancements in cochlear implants and assistive devices are included to help your patients get the most out of the newest technologies Special needs of children early identification of hearing loss assessment and intervention with pre school and school age children and management of hearing problems in the educational setting are covered in detail
