Phospholipid Transfer Proteins Emerging Roles In Vesicle Trafficking:

Phospholipid Transfer Proteins Vytas A. Bankaitis, 1996 *Phospholipid Transfer Proteins* Vytas A. Bankaitis, 1996-04

The subject of this book is an enigmatic class of proteins the phospholipid transfer proteins This volume provides not only a general reference for researchers and clinicians who desire to acquaint themselves with the biochemistry and cell biology of these fascinating proteins but also gives an up to date account of the exciting developments regarding our understanding of phosphatidylinositol phosphatidylcholine transfer protein function in cells *Frontiers in Bioactive Lipids* Jack Y. Vanderhoek, 2012-12-06 Proceedings of the Sixteenth Washington International Spring Symposium held at The George Washington University May 6 9 1996 *Report of the Council for Tobacco Research--U.S.A., Inc* Council for Tobacco Research--U.S.A., 1996 *New Roles of Autophagy Pathways in Cancer* Daniel Hector Grasso, Eugenia Morselli, Waleska Kerllen Martins, Claudio Marcelo Fader, 2021-09-10 *Intracellular Lipid Transport* Guillaume Drin, 2024-12-19 This fully updated volume explores different classes of lipid transporters such as lipid transfer proteins flippases and scramblases and significant advances in solving their biological functions The first half of the book features methodologies to measure the movement of lipids between or in organelle membranes inside eukaryotic cells including plant cells or in prokaryotic cells and the book continues with in vitro or in silico approaches aiming to define more from a biochemical and structural standpoint how lipid transfer proteins function Written for the highly successful Methods in Molecular Biology series chapters include introductions to their respective topics lists of the necessary materials and reagents step by step and readily reproducible laboratory protocols and tips on troubleshooting and avoiding known pitfalls Authoritative and up to date *Intracellular Lipid Transport Methods and Protocols* Second Edition serves as an ideal guide for researchers seeking to shed light on diverse aspects of this critical and often elusive cellular process *New Developments in Lipid-Protein Interactions and Receptor Function* K.W.A. Wirtz, Lester Packer, J.Å. Gustafsson, A.E. Evangelopoulos, J.P. Changeux, 2012-12-06 A NATO Advanced Study Institute on New Developments in Lipid Protein Interactions and Receptor Function was held on the Island of Spetsai Greece from August 16 27 1992 This Institute was organized to bring together researchers in the field of membrane organization and dynamics with those actively involved in studies on receptor function signal transduction mechanisms and gene regulation 2 Presentations and discussions focussed on the regulation of intracellular Ca levels on the second messengers derived from inositol lipids and on the specific phospholipase C isozymes involved in these processes A major focus was on G proteins and the effect of lipid anchors on their function These principles of regulation were further discussed in the context of receptors for acetylcholine lysophosphatidic acid and low density lipoproteins In addition various aspects of the genomic regulation of cell growth and differentiation by transcription factors were presented These topics were put into perspective by discussing the most recent developments in lipid protein interactions protein insertion into membranes membrane lipid organization and lipid dynamics as mediated by phospholipid transfer proteins This book

presents the content of the major lectures and a selection of the most relevant of the most important topics posters These proceedings offer a comprehensive account presented during the course of the Institute The book is intended to make these proceedings accessible to a large audience **EJCB** ,1996-05 Emerging Role of Lipids in Metabolism and Disease Marco Segatto,Valentina Pallottini,2021-04-01 Even though initially considered as a passive means for storing energy lipids are now regarded as multifaceted molecules with crucial structural and functional activities For instance some of them play essential roles as key components of cell membranes whereas others act as signaling molecules in the regulation of cell homeostasis In recent years lipid research has attracted increasing interest because of the involvement of this class of compounds in human health Indeed a plethora of pathological conditions are characterized by alterations in lipid metabolism such as cardiovascular diseases and brain disorders This Special Issue is a collection of papers from different experts in lipid research with the aim of providing new insights into the physiopathological involvement of lipids and their impact on human health This collection also demonstrates the usefulness of interdisciplinary approaches in the development of novel methods to study and manipulate lipid metabolism which may represent an attractive target for designing effective therapeutic strategies to counteract numerous pathologies Protein Reviews - Purinergic Receptors M. Zouhair Atassi,2020-02-03 The Protein Reviews series serves as a publication vehicle for reviews that focus on crucial contemporary and vital aspects of protein structure function evolution and genetics Volume 20 Purinergic Receptors has ten chapters The first five chapters deal with various aspects of membrane binding The first chapter focuses on the phox homology PX domain which is a phosphoinositide binding domain conserved in all eukaryotes and present in forty nine human proteins The next chapter deals with the modeling of PH domains phosphoinositides interactions This is followed by a chapter on BAR domain proteins regulate Rho GTPase signaling The BAR Bin Amphiphysin Rvs domain is a membrane lipid binding domain present in a wide variety of proteins often proteins with a role in Rho regulated signaling pathways The fourth article presents AP180 N terminal homology ANTH and Epsin N terminal homology ENTH domains and discusses their physiological functions and involvement in disease The fifth article reviews the polyphosphoinositide binding domains and presents insights from peripheral membrane and lipid transfer proteins This is followed by a chapter on the physiological functions of phosphoinositide modifying enzymes and their interacting proteins in Arabidopsis then by a chapter on the molecular mechanisms of Vaspin action in various tissues such as adipose tissue skin bone blood vessels and the brain The eighth chapter deals with exceptionally selective substrate targeting by the metalloprotease anthrax lethal factor followed by an article on Salmonella E coli and Citrobacter type III secretion system effector proteins that alter host innate immunity The last chapter presents New techniques to study intracellular receptors in living cells with insights into RIG I like receptor signaling Volume 20 is intended for research scientists clinicians physicians and graduate students in the fields of biochemistry cell biology molecular biology immunology and genetics *Emerging Functions of Septins* Manoj B.

Menon, Matthias Gaestel, 2017-10-10 Together with the microfilament microtubule and intermediate filament networks septins constitute an integral part of the eukaryotic cytoskeleton Historically identified as proteins critical for septum formation in the budding yeast *Saccharomyces cerevisiae* septin family GTPases are expressed and participate in the process of cytokinesis in most eukaryotes except higher plants More than a dozen septin genes in mammals together with various splice variants displaying tissue specific expression patterns and flexible hetero polymeric higher order assembly achieve an unfathomable complexity superior to the other cytoskeletal components Even though the initial studies in the septin field was restricted to their evolutionarily conserved role in cell division strong expression of septins in the non dividing cells of the brain generated great interest in understanding their role in neuronal morphogenesis and other aspects of cellular function On one hand recent developments indicate complex non canonical roles for septins in diverse processes ranging from neuronal development to immune response and calcium signaling On the other hand several lines of data including those from knockout models question the universal role for septins in animal cell cytokinesis Mammalian hematopoietic cells seem to proliferate and efficiently undergo cytokinesis in the absence of pivotal septin proteins in a context dependent manner The lack of septin dependence of hematopoiesis also opens the possibility of safely targeting septin dependent cytokinesis for solid tumor therapy Thus the septin field is perfectly poised with novel roles for septins being discovered and the basic understanding on septin assembly and its canonical functions constantly revisited The objective of this research topic was to provide an exclusive platform for discussing these rapid advances in the septin field With a mixture of reviews and research articles encompassing diverse areas of septin research ranging from the humble yeast model to human cancer this ebook will be an interesting reading material for both experts as well as new comers to the septin field **Cumulated Index Medicus**

,1976 Phosphoinositides II: The Diverse Biological Functions Tamas Balla, Matthias Wymann, John D. York, 2012-02-28 Phosphoinositides play a major role in cellular signaling and membrane organization During the last three decades we have learned that enzymes turning over phosphoinositides control vital physiological processes and are involved in the initiation and progression of cancer inflammation neurodegenerative cardiovascular metabolic disease and more In two volumes this book elucidates the crucial mechanisms that control the dynamics of phosphoinositide conversion Starting out from phosphatidylinositol a chain of lipid kinases collaborates to generate the oncogenic lipid phosphatidylinositol 3 4 5 trisphosphate For every phosphate group added there are specific lipid kinases and phosphatases to remove it Additionally phospholipases can cleave off the inositol head group and generate poly phosphoinositols which act as soluble signals in the cytosol Volume II extends into the role of phosphoinositides in membrane organization and vesicular traffic Endocytosis and exocytosis are modulated by phosphoinositides which determine the fate and activity of integral membrane proteins Phosphatidylinositol 4 5 bisphosphate is a prominent flag in the plasma membrane while phosphatidylinositol 3 phosphate decorates early endosomes The Golgi apparatus is rich in phosphatidylinositol 4 phosphate stressed cells increase

phosphatidylinositol 3 5 bisphosphate and the nucleus has a phosphoinositide metabolism of its own Phosphoinositide dependent signaling cascades and the spatial organization of distinct phosphoinositide species are required in organelle function fission and fusion membrane channel regulation cytoskeletal rearrangements adhesion processes and thus orchestrate complex cellular responses including growth proliferation differentiation cell motility and cell polarization
