**Population, Development and Income Distribution** R. Scott Moreland, 1984      Population Growth, Income Distribution, and Economic Development Nico Heerink, 2012-12-06 In this book a model of long term interrelationships between income distribution population growth and economic development is developed and estimated from data for 54 countries The results indicate that a reduction of income inequality leads to lower fertility and mortality to improved basic needs satisfaction and to lower labour force participation of young and old males and of females in Asia and Africa The effect of income distribution on saving and consumption is found to be negligible These outcomes suggest that family planning and health policies in LDCs will show better results when they are supplemented with policies aimed at making the poor benefit from economic growth As regards development policy the results indicate that a reduction of income inequality does not impair the formation of physical capital but enhances the formation of human capital and lowers the growth rate of the labour force      **International Handbook of Population Policies** John F. Inequality, Gender Gaps and Economic Growth Ms.Dalia S Hakura,Mr.Mumtaz Hussain,Ms.Monique Newiak,Vimal Thakoor,Mr.Fan Yang,2016-09-23 A growing body of empirical evidence suggests that inequality income or gender related can impede economic growth Using dynamic panel regressions and new time series data this paper finds that both income and gender inequalities including from legal gender based restrictions are jointly negatively associated with per capita GDP growth Examining the relationship for countries at different stages of development we find that this effect prevails mainly in lower income countries In particular per capita income growth in sub Saharan Africa could be higher by as much as 0.9 percentage points on average if inequality was reduced to the levels observed in the fastgrowing emerging Asian countries High levels of income inequality in sub Saharan Africa appear partly driven by structural features However the paper's findings show that policies that influence the opportunities of low income households and women to participate in economic activities also matter and therefore if well designed and targeted could play a role in alleviating inequalities
