Population Studies Animal Ecology Demo:

Human Evolutionary Demography Oskar Burger, Ronald Lee, Rebecca Sear, 2024-06-14 Human evolutionary demography is an emerging field blending natural science with social science This edited volume provides a much needed interdisciplinary introduction to the field and highlights cutting edge research for interested readers and researchers in demography the evolutionary behavioural sciences biology and related disciplines By bridging the boundaries between social and biological sciences the volume stresses the importance of a unified understanding of both in order to grasp past and current demographic patterns Demographic traits and traits related to demographic outcomes including fertility and mortality rates marriage parental care menopause and cooperative behavior are subject to evolutionary processes Bringing an understanding of evolution into demography therefore incorporates valuable insights into this field just as knowledge of demography is key to understanding evolutionary processes By asking questions about old patterns from a new perspective the volume composed of contributions from established and early career academics demonstrates that a combination of social science research and evolutionary theory offers holistic understandings and approaches that benefit both fields Human Evolutionary Demography introduces an emerging field in an accessible style It is suitable for graduate courses in demography as well as upper level undergraduates Its range of research is sure to be of interest to academics working on demographic topics anthropologists sociologists demographers natural scientists working on evolutionary processes and disciplines which cross cut natural and social science such as evolutionary psychology human behavioral ecology cultural evolution and evolutionary medicine As an accessible introduction it should interest readers whether or not they are currently familiar with human evolutionary demography *Modeling Demographic Processes in Marked Populations* David L. Thomson, Evan G. Cooch, Michael J. Conroy, 2008-12-11 Here biologists and statisticians come together in an interdisciplinary synthesis with the aim of developing new methods to overcome the most significant challenges and constraints faced by quantitative biologists seeking to model demographic rates **Research Grants Index** National Institutes of Health (U.S.). Division of Research Grants, 1975 Demographic Methods Across the Tree of Life Roberto Salguero-Gómez, Marlène Gamelon, 2021 This novel book provides the reader with the fundamentals of data collection model construction analyses and interpretation across a wide repertoire of demographic techniques and protocols clearly guided throughout with fully reproducible R scripts **Medical and Health Related Sciences Thesaurus** National Institutes of Health (U.S.), 1985 Indexing terms used in CRISP Computer Retrieval of Information on Scientific Projects and in Research grants index Alphabetical arrangement Cross references under terms *The Emergence of Civilisation* Charles Keith Maisels, 2003-12-16 The Emergence of Civilisation is a major contribution to our understanding of the development of urban culture and social stratification in the Near Eastern region Charles Maisels argues that our present assumptions about state formation based on nineteenth century speculations are wrong His investigation illuminates the changes in scale complexity

and hierarchy which accompany the development of civilisation The book draws conclusions about the dynamics of social change and the processes of social evolution in general applying those concepts to the rise of Greece and Rome and to the collapse of the classical Mediterranean world *Effects of Climate Change on Birds* Peter O. Dunn, Anders Pape Møller, 2019 This new edition provides an exhaustive and up to date synthesis of the rapidly expanding literature on birds and climate change *Wildlife Review*, 1958 **Research Awards Index**, **Demographic Toxicity** H. Resit Akcakaya, John D. Stark, Todd S. Bridges, 2008-04-25 This edited volume collects population and metapopulation models for a wide variety of species focusing on the use of models in population level risk assessment for toxins Each chapter of Demographic Toxicity describes the application of a population model to one species with the aim of demonstrating how various life history characteristics of the species are incorporated into the model how ecotoxicological impacts are modeled and how the results of the model has been or can be used in risk assessment The model in each chapter is implemented in RAMAS software which uses matrix modeling of population dynamics RAMAS software is believed to be the most powerful tool ever invented for this task Demographic Toxicity includes a CD that contains a demo version of the program and the data files for each species The book explains how to use these specific tools for modeling analysis and interpretation of data Demographic Toxicity provides a major review of current knowledge on population dynamics in different species representing both terrestrial and aquatic environments **Biology and Conservation of Owls of the Northern Hemisphere** James R. Duncan, David H. Johnson, Thomas H. Nicholls, 1997 Public Health Service Publication United States. Public Health Service, 1970 **Biodemography** James R. Carey, Deborah A. Roach, 2020-01-07 An authoritative overview of the concepts and applications of biological demography This book provides a comprehensive introduction to biodemography an exciting interdisciplinary field that unites the natural science of biology with the social science of human demography Biodemography is an essential resource for demographers epidemiologists gerontologists and health professionals as well as ecologists population biologists entomologists and conservation biologists This accessible and innovative book is also ideal for the classroom James Carey and Deborah Roach cover everything from baseline demographic concepts to biodemographic applications and present models and equations in discrete rather than continuous form to enhance mathematical accessibility They use a wealth of real world examples that draw from data sets on both human and nonhuman species and offer an interdisciplinary approach to demography like no other with topics ranging from kinship theory and family demography to reliability engineering tort law and demographic disasters such as the Titanic and the destruction of Napoleon's Grande Armée Provides the first synthesis of demography and biology Covers baseline demographic models and concepts such as Lexis diagrams mortality fecundity and population theory Features in depth discussions of biodemographic applications like harvesting theory and mark recapture Draws from data sets on species ranging from fruit flies and plants to elephants and humans Uses a uniquely interdisciplinary approach to demography bringing together a diverse range of concepts models and

applications Includes informative biodemographic shorts appendixes on data visualization and management and more than 150 illustrations of models and equations **General Technical Report NC. ,1981 Applied Population Biology S.K. Jain,L.W. Botsford,2007-07-23** An increasing variety of biological problems involving resource management conservation and environmental quality have been dealt with using the principles of population biology defined to include population dynamics genetics and certain aspects of community ecology There appears to be a mixed record of successes and failures and almost no critical synthesis or reviews that have attempted to discuss the reasons and ways in which population biology with its remarkable theoretical as well as experimental advances could find more useful application in agriculture forestry fishery medicine and resource and environmental management This book provides examples of state of the art applications by a distinguished group of researchers in several fields The diversity of topics richly illustrates the scientific and economic breadth of their discussions as well as epistemological and comparative analyses by the authors and editors Several principles and common themes are emphasized and both strengths and potential sources of uncertainty in applications are discussed This volume will hopefully stimulate new interdisciplinary avenues of problem solving research Wildlife Population Growth Rates R. M. Sibly,J. Hone,T. H. Clutton-Brock,2003-08-07 What determines where a species lives And what determines its abundance This book takes a fresh approach to some of the classic questions in ecology Despite great progress in the twentieth century much more remains to be done before we can provide full answers to these questions The methods described and deployed in this book point the way forward The core message of the book is that the key insights come from understanding what determines population growth rate and that application of this approach will make ecology a more predictive science Topics covered include population regulation density dependence the ecological niche resource and interference competition habitat fragmentation and the ecological effects of environmental stress together with applications to conservation biology wildlife management human demography and ecotoxicology After a substantial introduction by the editors the book brings together contributions from leading scientists from Australia New Zealand North America Europe and the U K Wildlife 2001: Populations D.R. McCullough,R.H. Barrett,2012-12-06 In 1984 a conference called Wildlife 2000 Modeling habitat relationships of terrestrial vertebrates was held at Stanford Sierra Camp at Fallen Leaf Lake in the Sierra Nevada Mountains of California The conference was well received and the published volume Verner J M L Morrison and C J Ralph editors 1986 Wildlife 2000 modeling habitat relationships of terrestrial vertebrates University of Wisconsin Press Madison Wisconsin USA proved to be a landmark publication that received a book award by The Wildlife Society Wildlife 2001 populations was a followup conference with emphasis on the other major biological field of wildlife conservation and management populations It was held on July 29 31 1991 at the Oakland Airport Hilton Hotel in Oakland California in accordance with our intent that this conference have a much stronger international representation than did Wildlife 2000 The goal of the conference was to bring together an international group of specialists to address the state of

the art in wildlife population dynamics and set the agenda for future research and management on the threshold of the 21st century The mix of specialists included workers in theoretical as well as practical aspects of wildlife conservation and management Three general sessions covered methods modelling and conservation of threatened species *Reptile Biodiversity* Roy W. McDiarmid, 2012-01-10 Authoritative and comprehensive provides an up to date description of the tool box of methods for inventorying and monitoring the diverse spectrum of reptiles All biodiversity scientists will want to have it during project planning and as study progresses A must for field biologists conservation planners and biodiversity managers Jay M Savage San Diego State University Kudos to the editors and contributors to this book From the perspective of a non ecologist such as myself who only occasionally needs to intensively sample a particular site or habitat the quality and clarity of this book has been well worth the wait Jack W Sites Jr *Encyclopedia of Population* Paul George Demeny, Geoffrey McNicoll, 2003 Annotation This successor to Macmillan s International Encyclopedia of Population provides expanded up to date coverage of demographic topics both in the core field and in neighboring disciplines Designed to encompass the large scale changes in emphasis and research directions in population studies during the last 20 years coverage complements the curriculum focus on human migration patterns population decline the environmental impact of dense population and problems of old age support **Ecosystem Dynamics of the Boreal Forest : The Kluane Project** Vancouver Charles J. Krebs Professor of Zoology University of British Columbia, Edmonton Stan Boutin Professor of Zoology University of Alberta, Rudy Boonstra Professor of Physiology and Zoology University of Toronto, 2001-03-31 The boreal forest is one of the world s great ecosystems stretching across North America and Eurasia in an unbroken band and containing about 25% of the world s closed canopy forests The Kluane Boreal Forest Ecosystem Project was a 10 year study by nine of Canada s leading ecologists to unravel the impact of the snowshoe hare cycle on the plants and the other vertebrate species in the boreal forest In much of the boreal forest the snowshoe hare acts as a keystone herbivore fluctuating in 9 10 year cycles and dragging along secondary cycles in predators such as lynx and great horned owls By manipulating the ecosystem on a large scale from the bottom via fertilizer additions and from the top by predator exclosures they have traced the plant herbivore relationships and the predator prey relationships in this ecosystem to try to answer the question of what drives small mammal population cycles This study is unique in being large scale and experimental on a relatively simple ecosystem with the overall goal of defining what determines community structure in the boreal forest Ecosystem Dynamics of the Boreal Forest The Kluane Project summarizes these findings weaving new discoveries of the role of herbivores turned predators compensatory plant growth and predators eating predators with an ecological story rich in details and clear in its findings of a community where predation plays a key role in determining the fate of individuals and populations The study of the Kluane boreal forest raises key questions about the scale of conservation required for boreal forest communities and the many mammals and birds that live there
