Population Of Selves A Therapeutic Exploration Of Personal Diversity:

A Population of Selves Erving Polster, 2009-04 **Enchantment and Gestalt Therapy** Erving Polster, 2020-11-30

Enchantment and Gestalt Therapy is a personal exploration of Erving Polster's remarkable career, the value of the Gestalt approach, and the power of enchantment in psychotherapy. Polster points ahead to a vision of a psychotherapy that includes the population as a whole rather than focusing on individuals, highlights common aspects of living, and focuses on creating an ethos for a shared understanding. The book outlines the six Gestalt therapy concepts that have formed the basis of Polster's work and describes Life Focus Groups with an emphasis on the communal relationship between tellers and listeners. Polster also describes the phenomenon of enchantment in psychotherapy in detail with reference to his own experiences. This unique work is essential reading for Gestalt therapists, other professionals interested in Gestalt approaches, and readers looking for a deeper insight into community and connection. In the below link, Erving Polster speaks to Margherita Spagnuolo Lobb, the series editor of The Gestalt Therapy Book Series, about Enchantment and Gestalt Therapy: <https://www.youtube.com/watch?v=7PVG9JgpTQQ> feature YouTube: [Mind, Body, Soul and Spirit in Transactional Analysis](#) Gordon Law, 2006

Relationships may be understood as the contact that emerges from observable social roles underpinned by interpersonal attitudes. Using transactional analysis and other approaches, this book presents a series of models based on an analysis of the relationships that are created when contact between people links images and roles to confirm existential life positions. Because the models provide a meta-level framework for understanding and influencing any sequence of interaction, irrespective of setting or TA specialism, they give ample scope for practitioners to exercise widely differing preferences, techniques, and strategies for interacting with clients in ways that encompass a transpersonal or a spiritual view of relationships. *Psychosynthesis* John Firman, Ann Gila, 2010-03-10

Conceived by Italian psychiatrist Roberto Assagioli, psychosynthesis is one of the first Western psychologies that addresses both spiritual development and psychological healing and growth by recognizing and supporting the particular life journey of the person, the individual's own unique path of self-realization. Firman and Gila present a comprehensive account of psychosynthesis, providing a transpersonal integration of developmental, personality, and clinical theory. They reveal some of the relationships between psychosynthesis and contemporary developmental research, object relations theory, intersubjective psychology, trauma theory, the recovery movement, Jungian psychology, humanistic and transpersonal psychology, and common psychological diagnoses. Case examples and practical theory designed to support both the layperson and the professional seeking to understand and facilitate psychospiritual growth are included. **A Population of Selves** Erving Polster, 1995-04-24

Erving Polster, coauthor of the landmark work *Gestalt Therapy: Integrated*, greatly expands the knowledge and thinking on the development of self. *A Population of Selves* offers therapists new ways of thinking about the self, as well as specific procedures to help patients realize a powerful and healthy sense of self, a goal at the very heart of the therapeutic process. In an innovative expansion of therapeutic theory, Polster shows how the human

reflex to summarize and animate experiences serves as a natural springboard for the formation of selves He enlarges the therapeutic aim of synthesizing alienated aspects of a person by offering a construct of heterogeneous characters within each with its own place and voice Every person is host to a population of selves the infantile the cunning the rebellious the tAnder Using case examples from his own therapeutic practice Polster illustrates eight major pathways for therapists to elicit new selves and to help their patients renew neglected or misunderstood selves His approach ties self theory more closely than ever to actual therapeutic practice He shows how to evoke selves through the use of stofy and he explains how to tighten up therapy sessions to encourage the emergence of selves Polster also suggests techniques aimed at improving contact among various selves as well as between therapist and patient and then augmenting strong contact with the powerful complementary use of empathy Finally he demonstrates how to guide patients through their alienated selves and without robbing each of its identity link these selves to create a greater sense of personal identity
