## **Population Technology And Lifestyle The Transition To Sustainability:**

Population, Technology, and Lifestyle Robert J. A. Goodland, Herman E. Daly, Salah El Serafy, 1992 Suggests specific actions that governments and individuals can take to lead the way to a sustainable society Population, Technology, and Lifestyle Robert J. A. Goodland, Herman E. Daly, Salah El Serafy, 1992 Three of the factors that most directly affect the potential for sustainability population technology and lifestyle are discussed and analyzed in depth In addition the authors examine global patterns of income distribution and the pressing need for greater equality between the northern and southern hemispheres The authors all leading scholars in their fields argue that traditional means of economic growth which rely on an ever increasing use of energy and natural materials cannot be sustained They advocate an imaginative pursuit of economic ends that are less resource intensive and allow for increases in quality of life without corresponding decreases in environmental quality *Sustainable Energy Consumption and Society* David L. Goldblatt, 2006-03-30 Origin of this book In 1998 the Swiss Federal Institute of Technology ETH initiated the 2000 Watt Society a University wide research program meant to help Switzerland realize a dramatic reduction in its future energy use A project within the initiative Sustainability in the ETH domain the 2000 Watt per capita Society sought to promote the gradual introduction of a way of living and working that requires only one third of current energy consumption but 1 2 still delivers an improved quality of life Two thousand watts is roughly the current world average per capita energy consumption it was the average level in Switzerland in the 1950s it is some three times less than current 3 Swiss usage and reducing to that level again in concert with other industrialized nations would greatly facilitate stabilization of atmospheric carbon dioxide CO levels in the long term given projections about world 2 population growth and exploitable energy resources Imboden 1999 1 [http://www.novatlantis.ch/frames\\_e.html](http://www.novatlantis.ch/frames_e.html) 2 A watt is a power term equivalent to 1 joule second Non engineers generally prefer to think of 2000 watts per capita in terms of energy use per unit time such as joules second or kilowatt hours hour For Switzerland 2000 watts per capita is equivalent to a primary annual energy consumption of about 65 gigajoules 65 billion joules per capita Although less generally communicative the 2000 watt name is clean and trim and since it has stuck we will use it throughout the book

Climate Change and Environmental Ethics Ved P. Nanda, 2012-12-01 There is a broad consensus that climate change presents the international community with a formidable challenge Yet progress on all fronts prevention mitigation and adaptation has been slow Ved P Nanda finds an explanation for this disparity in the sharp divide between the developed and developing countries Developing countries demand that major industrialized nations provide the necessary resources and technology to address climate change while many developed countries seek firm commitments and timetables on action from the developing countries The result is a stalemate *Climate Change and Environmental Ethics* contains first rate research and thinking from scholars from multiple disciplines ethics ecology philosophy economics political science history and international law What distinguishes this volume from recent work on climate change are two of its special features One is

the multi disciplinary backgrounds of the scholars their stellar experiences and the wisdom with which they express not simply their philosophy and theory but also their suggestions for concrete specific action in practical terms The second is the special niche this volume fills in its overarching theme of the need for a renewed environmental ethic that can bring together these disparate but interconnected views This volume explores alternative ways of conceiving our relation to the natural world A spirit of international cooperation and collaboration is needed to meet the challenge The reader is compelled to think anew about our understanding of the scientific and technical issues as well as our values and ethical responsibilities regarding climate change
