A. Richter-Menge,Cold Regions Research and Engineering Laboratory (U.S.),1986 This report presents the first series of conventional triaxial tests carried out on columnar first year sea ice samples obtained from the field and tested under controlled laboratory conditions using a large capacity test machine A total of 110 horizontal ice samples from Prudhoe Bay Alaska were tested on a closed loop electro hydraulic test machine at 10 C in unconfined and confined constant strain rate compression The confined tests were conducted in a conventional triaxial cell that maintained a constant ratio between the radial and axial stress to simulate in situ loading conditions The load ratios used were 0 25 0 50 and 0 75 The strain rate of each test was constant at 0 01 0 001 or 0 00001 s Data are presented on the strength failure strain and initial tangent modulus of the first year sea ice under these loading conditions The effects of confining pressure strain rate and ice structure on the mechanical properties of the ice are examined **CRREL Report** ,1986 **Petroleum and Marine Technology Information Guide** J. Hutcheon,A. Myers,S. Oue,B. Rodden,J. Whittick,2003-09-02 First published in 1981 as the Offshore Information Guide this guide to information sources has been hailed internationally as an indispensable handbook for the oil gas and marine industries

International Journal of Computational Methods and Experimental Measurements - Volume 3, Issue 1 ,2015-03-31 The International Journal of Computational Methods and Experimental Measurements CMEM provides the scientific community with a forum to present the interaction between the complementary aspects of computational methods and experimental measurements and to stress the importance of their harmonious development and integration The steady progress in the efficiency of computers and software has resulted in the continuous development of computer simulation which has influenced all scientific and engineering activities As these simulations expand and improve the need to validate them grows and this can only be successfully achieved by performing dedicated experimental tests Furthermore because of their continual development experimental techniques are becoming so complex and sophisticated that they need to be controlled by computers with the data obtained processed by means of computational methods The aim of the Journal is to review the latest work in computational methods and experimental measurements with a view to achieving harmonious development and interaction between the two **Mass Balance of the Cryosphere** Jonathan L.
