Caviar Inga Saffron, 2002-10-08 In the tradition of *Cod and Olives* a fascinating journey into the hidden history culture and commerce of caviar Once merely a substitute for meat during religious fasts today caviar is an icon of luxury and wealth In *Caviar* Inga Saffron tells for the first time the story of how the virgin eggs of the prehistoric looking bottom feeding sturgeon were transformed from a humble peasant food into a czar's delicacy and ultimately a coveted status symbol for a rising middle class She explores how the glistening black eggs became the epitome of culinary extravagance while taking us on a revealing excursion into the murky world of caviar on the banks of the Volga River and Caspian Sea in Russia the Elbe in Europe and the Hudson and Delaware Rivers in the United States At the same time Saffron describes the complex industry caviar has spawned illustrating the unfortunate consequences of mass marketing such a rare commodity The story of caviar has long been one of conflict crisis extravagant claims and colorful characters such as the Greek sea captain who first discovered the secret method of transporting the perishable delicacy to Europe the canny German businessmen who encountered a wealth of untapped sturgeon in American waters the Russian Communists who created a sophisticated cartel to market caviar to an affluent Western clientele the dirt poor poachers who eked out a living from sturgeon in the aftermath of the Soviet collapse and the caviar Mafia that has risen in their wake and the committed scientists who sacrificed their careers to keep caviar on our tables Filled with lore and intrigue *Caviar* is a captivating work of culinary natural and cultural history

Electricity and Magnetism, 2nd Edition Peter Fairley, 2013-01-01 Since prehistoric times people have been fascinated by electricity and magnetism Ancient people marveled at the auroras streaks of colored light that appear in the night sky near the poles They wondered about the ability of materials such as amber and magnetite rock to attract or repel other objects Many people believed magic was behind these phenomena Then in the 1600s scientists began to lift the fog of superstition Electricity and

magnetism are behind some of life's greatest mysteries: the auroras, the beating of the human heart and even the twisting of time and space known as relativity. This book tells the story of scientists and their discoveries to explain how the theory of electromagnetism came to be.

History, Philosophy and Science Teaching Michael R. Matthews, 2017-08-30 This anthology opens new perspectives in the domain of history, philosophy and science teaching research. Its four sections are: first, science culture and education; second, the teaching and learning of science; third, curriculum development and justification; and fourth, indoctrination. The first group of essays deal with the neglected topic of science education and the Enlightenment tradition. These essays show that many core commitments of modern science education have their roots in this tradition and consequently all can benefit from a more informed awareness of its strengths and weaknesses. Other essays address research on learning and teaching from the perspectives of social epistemology and educational psychology. Included here is the first ever English translation of Ernst Mach's most influential 1890 paper on 'The Psychological and Logical Moment in Natural Science Teaching'. This paper launched the influential Machian tradition in education. Other essays address concrete cases of the utilisation of history and philosophy in the development and justification of school science curricula. These are instances of the supportive relation of HPS, a subject long discussed in philosophy of education but inadequately in science education. This book is a timely reminder of why history and philosophy of science are urgently needed to support understanding of science. From major traditions such as the Enlightenment to the tensions around cultural studies of science, the book provides a comprehensive context for the scientific endeavour, drawing on curriculum and instructional examples. Sibel Erduran, University of Oxford, UK. The scholarship that each of the authors in this volume offers deepens our understanding of what we teach in science and why that understanding matters. This is an important book exploring a wide set of issues and should be read by anyone with an interest in science or science education. Jonathan Osborne, Stanford University, USA. This volume presents new and updated perspectives in the field, such as the Enlightenment Tradition, Cultural Studies, Indoctrination in Science Education and Nature of Science. Highly recommended. Mansoor Niaz, Universidad de Oriente, Venezuela. This volume provides an extremely valuable set of insights into educational issues related to the history and philosophy of science. Michael J. Reiss, University College London, UK.
