Seismicity Of The European Area Part I:

Seismicity of the European Area Vít Kárník, 2012-12-06 The second part of the Seismicity of the European Area contains further results of the survey of European seismicity performed during the period 1959-1967. It was intended to publish the second part with the shortest possible delay. The first part appeared in 1968 when the manuscript of the second part was handed over to the publisher. Unfortunately, due to unexpected technical difficulties, the publication had to be postponed until the end of 1970. Thus, the manuscript reflects the state of knowledge corresponding to the year 1967 when the work on the manuscript was concluded. It was only possible to make minor changes or to insert additional very brief information into the catalogue. Prague, July 20, 1970. Vít Kárník.

Seismicity and Seismic Risk in the Offshore North Sea Area A.R. Ritsema, A. Gurpinar, 2012-12-06 The Workshop on the Seismicity and Seismic Risk in the Offshore North Sea Area was intended to bring together experts from a variety of disciplines as well as interest groups with involvement in siting design and construction of offshore structures in the region. Participants came from the fields of geology, seismology, oceanography, geotechnical and structural engineering and risk analysis. The wide range of participant affiliations included institutes, Observatories, universities, oil companies, consultants and insurance firms. All nationalities around the North Sea were present, in addition to some experts from outside the region. All participants were present on the basis of personal invitation. The idea of organizing the Workshop stemmed from considerations such as the rapidly increasing material and personnel investments and versatility of type of structures in the basin during the past decade, the present-day important role of the North Sea oil and gas production in the economy of Western Europe and the increase of potential environmental risks in the region. Although devastating earthquakes are almost unknown in the area and seismic hazard is not great, the seismic risk grows with the growing size and number of structures in the area. The study of the potential seismic risks therefore cannot be neglected any more. The siting and design of offshore platforms and submarine pipelines are controlled by the degree of their vulnerability as well as the seismic hazard in the region.

Seismic Ground Motion in Large Urban Areas Giuliano F. Panza, Ivanka Pakaleva, Concettina Nunziata, 2012-12-06 The accelerated and often uncontrolled growth of the cities has contributed to the ecological transformation of their immediate surroundings. Factors contributing to the urban vulnerability include lowering or

rising of the water table subsidence loss of bearing capacity of soil foundations and instability of slopes Recent catastrophic earthquakes highlight the poor understanding by decision makers of seismic related risk as well as the tendency of some builders to use the cheapest designs and construction materials to increase short term economic returns on their investment Losses from earthquakes will continue to increase if we do not shift towards proactive solution Disaster reduction is both an issue for consideration in the sustainable development agenda and a cross cutting issue relating to the social economic environmental and humanitarian sectors As location is the key factor which determines the level of risk associated with a hazard land use plans and mapping should be used as tools to identify the most suitable usage for vulnerable areas
