**After Empire** Adom Getachew, 2020-04-28 Decolonization revolutionized the international order during the twentieth century. Yet standard histories that present the end of colonialism as an inevitable transition from a world of empires to one of nations, a world in which self-determination was synonymous with nation building, obscure just how radical this change was. Drawing on the political thought of anticolonial intellectuals and statesmen such as Nnamdi Azikiwe, W. E. B. Du Bois, George Padmore, Kwame Nkrumah, Eric Williams, Michael Manley, and Julius Nyerere, this important new account of decolonization reveals the full extent of their unprecedented ambition to remake not only nations but the world. Adom Getachew shows that African, African American, and Caribbean anticolonial nationalists were not solely or even primarily nation builders. Responding to the experience of racialized sovereign inequality dramatized by interwar Ethiopia and Liberia, Black Atlantic thinkers and politicians challenged international racial hierarchy and articulated alternative visions of worldmaking. Seeking to create an egalitarian postimperial world, they attempted to transcend legal, political, and economic hierarchies by securing a right to self-determination within the newly founded United Nations, constituting regional federations in Africa and the Caribbean, and creating the New International Economic Order. Using archival sources from Barbados, Trinidad, Ghana, Switzerland, and the United Kingdom, *Worldmaking after Empire* recasts the history of decolonization, reconsiders the failure of anticolonial nationalism, and offers a new perspective on debates about today's international order.

**Japan, China, and the Growth of the Asian International Economy, 1850-1949** Kaoru Sugihara, 2005-03-24 Modern Asian economic history has often been written in terms of Western impact and Asia's response to it. This volume argues that the growth of intra-regional trade, migration, and capital and money flows was a crucial factor that determined the course of East Asian economic development. Twelve chapters are organized around three main themes. First, economic interactions between Japan and China were important in shaping the pattern of regional industrialization. Neither Japan nor China imported technology and organizations and attempted to catch up with the West alone. Japan's industrialization took place taking advantage of the Chinese merchant networks in Asia, while the Chinese competition was a critical factor in the Japanese technological and organizational upgrading in the interwar period. Second, the pattern of China's integration into the international economy was shaped by the growth of intra-Asian trade, migration, and capital flows and remittances. While the Western impact was largely confined to the littoral region of China, intra-Asian trade was more directly connected with China's internal market. Both the fall of the imperial monetary system and the rise of economic nationalism in the early twentieth century reflected increasing contacts with the Asian international economy. Third, a study of intra-Asian trade and migration helps us understand the nature of colonialism and the international climate of imperialism. In spite of the adverse political environment, East Asian merchant and migration networks exploited economic opportunities, taking advantage of colonial institutional arrangements and even political conflicts. They made a contribution to national and regional economic development in the politically more favourable environment after the Second World War by providing the valuable expertise and entrepreneurship they had.

accumulated prewar The character of the international order of Asia governed by Western powers especially Britain but shared also by Japan for most of the period was imperialism of free trade although it eventually collapsed by the late 1930s

Limits Of Fiscal, Monetary, And Trade Policies, The: International Comparisons And Solutions Jonathan Edward Leightner, 2014-09-05 Sixteen countries across the world including the United States and many European nations have fallen into economic crises since the late 1990s In *The Limits of Fiscal Monetary and Trade Policies International Comparisons and Solutions* Jonathan E Leightner convincingly argues that the fundamental cause of the global malaise is a surplus of savings He provides compelling evidence via statistical estimates that fiscal monetary and trade policies cannot solve the resulting problems since their effectiveness has plummeted Leightner also shows that the solution to the current global economic woes is a consumption driven growth model which China advocates but has yet to fully implement because when there is insufficient consumption excess savings will remain idle seek a return from rent or deception or fund speculative bubbles

*Development Theory and the Economics of Growth* Jaime Ros, 2001 Why are some countries richer than others Why do some economies grow so much faster than others do Do economies tend to converge at similar levels of per capita income Or is catching up simply impossible These questions have vast implications for human welfare After a period of lack of interest in growth theory they are back on the research agenda of mainstream economics They have also been at the heart of development economics since its inception some decades ago This book endeavors to answer such questions by blending classical contributions to development theory with recent developments in the economics of growth The unifying theme is that early theoretical insights and accumulated empirical knowledge of development economics have much to offer to research in the theory and empirics of economic growth With the help of a number of recent contributions the ideas and insights of the classical literature in development economics can be given simple and rigorous formulations Together they amount to an approach to growth theory that can overcome the long recognized empirical shortcomings of neoclassical growth economics while being free from the objections that can be raised against the new brand of endogenous growth theory In addition to an original thesis on the contribution that early development theory can make to the research program of modern growth economics the book provides professional and research economists and graduate students with an evaluation of the strengths and limitations of the different strands of inquiry in the modern economics of growth In addition it presents findings on comparative growth performance across countries Jaime Ros is Professor of Economics and Faculty Fellow of the Helen Kellogg Institute of International Studies University of Notre Dame
