Recent Progress In Photobiology:

Recent Progress in Photobiology E Bowen, 2012-12-02 Recent Progress in Photobiology contains the proceedings of the Fourth International Photobiology Congress held in Oxford on July 26-30 1964 and organized by a committee set up by the British Photobiology Group. Contributors explore the developments in photobiology particularly with respect to biological structures, chemical changes and molecular energy. This volume is organized into 10 sections encompassing 33 chapters and begins with an overview of basic photochemical processes that have direct implications on photobiology. The next chapters discuss the photochemistry of nucleic acids and their derivatives with some reference to their biological significance. The book also studies the visual processes in humans and animals, the structure, pigment chemistry and function of photoreceptor systems of plant and animal cells and receptor mechanisms in human vision. The natural photoenvironment and its influence on life and development is also explained, emphasizing how light shapes the ultimate fate of an organism in its habitat. The remaining chapters focus on energy conversion and photosynthesis, micro-irradiation of cells, photochemistry and photobiology of space research, light and melanin pigmentation of the skin and the effect of light on plant and animal cells. This book will be of interest to biologists and physiologists as well as to anyone engaged in photobiological research.

Concepts in Photobiology G.S. Singhal, G. Renger, S.K. Sopory, K.D. Irrgang, Govindjee, 2012-12-06 Photobiology is an important area of biological research since a very

large number of living processes are either dependent on or governed by light that we receive from the Sun Among various subjects photosynthesis is one of the most important and thus a popular topic in both molecular and organismic biology and one which has made a considerable impact throughout the world since almost all life on Earth depends upon it as a source of food fuel and oxygen However for growth of plants light is equally essential and research on photomorphogenesis has revealed exciting new developments with the application of newer molecular biological approaches The present book brings together and integrates various aspects of photosynthesis biology of pigments light regulation of chloroplast development nuclear and chloroplast gene expression light signal transduction other photomorphogenetic processes and some photoecological aspects under one cover The chapters cover biochemical and molecular discussions of most of the above topics in a comprehensive manner and include a wide range of hot topics that are currently under investigation in the field of photobiology of cyanobacteria algae and plants The authors of this book are selected international authorities in their fields from USA Europe Australia and Asia The book is designed primarily to be used as a text book by graduates and post graduates It is however also intended to be a resource book for new researchers in plant photobiology Several introductory chapters are designed as suitable reading for undergraduate courses in integrative and molecular biology biochemistry and biophysics

Progress in Photobiology Günther Otto Schenck, 1974 *Recent Advances in Bacterial Biofilm Studies* Liang Wang, Bing Gu, Li Zhang, Zuobin Zhu, 2024-02-28 Bacterial biofilm is a complex structure with diverse bacterial cells in a highly organized and ordered group within a matrix of extracellular polymeric substances they produce Microbes attach to surfaces to develop biofilms a sophisticated process regulated by factors such as nutritional status and biotic abiotic surface features An established biofilm structure mainly comprises bacterial cells proteins nucleic acid and exo polysaccharides that are extracellular macromolecules excreted as tightly bound layers in microbes providing a perfect niche for bacteria to exchange genetic material between cells In addition bacterial cells in the matrix also communicate via quorum sensing which greatly impacts

biofilm processes Under clinical circumstances bacterial biofilm shows great resistance to antibiotics disinfectants and body defense systems making it difficult for clinicians to eradicate and facilitate many infectious disease processes leading to chronic infections of patients with long term hospitalization and high mortality rates Therefore it is very important to understand the recent advances in forming regulating and eradicating biofilms in human infections to better prevent control and treat biofilm infections in humans Written by an international team of basic and clinical researchers the chapters of this book provide novel insights and advanced knowledge for life science researchers clinical researchers doctors and other interested readers on some of the latest developments in biofilms Recent Progress in Photobiology International Congress (1964: Oxford),1965 Trends in Photobiology Claude Helene,2012-12-06 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.),1965 **Recent Advances in Symbiosis Research: Integrative Approaches** M. Pilar Francino,Mónica Medina,2017-02-02 Traditionally symbiosis research has been undertaken by researchers working independently of one another and often focused on a few cases of bipartite host symbiont interactions New model systems are emerging that will enable us to fill fundamental gaps in symbiosis research and theory focusing on a broad range of symbiotic interactions and including a variety of multicellular hosts and their complex microbial communities In this Research Topic we invited researchers to contribute their work on diverse symbiotic networks since there are a large variety of symbioses with major roles in the proper functioning of terrestrial or aquatic ecosystems and we wished the Topic to provide a venue for communicating findings across diverse taxonomic groups A synthesis of recent investigations in symbiosis can impact areas such as agriculture where a basic understanding of plant microbe symbiosis will provide foundational information on the increasingly important issue of nitrogen fixation climate change where anthropogenic factors are threatening the survival of marine symbiotic ecosystems such as coral reefs animal and human health where unbalances in host microbiomes are being increasingly associated with a wide range of diseases and biotechnology where process optimization can be achieved through optimization of symbiotic partnerships Overall our vision was to produce a volume of works that will help define general principles of symbiosis within a new conceptual framework in the road to finally establish symbiology as an overdue central discipline of biological science Recent Progress in Photobiology International Congress on Photobiology. 4, 1964, Oxford,1965 Photophysiology Arthur C.
