Nuclear Evolution Christopher B. Hills, 1977 **Nuclear Evolution [a Guide to Cosmic Enlightenment]**
Christopher B. Hills, 1968 **Nuclear Science Abstracts**, 1957 **Evolutionary Processes in Binary and Multiple Stars** Peter Eggleton, 2006-07-20 Binary systems of stars are as common as single stars Stars evolve primarily by nuclear reactions in their interiors but a star with a binary companion can also have its evolution influenced by the companion Multiple star systems can exist stably for millions of years but can ultimately become unstable as one star grows in radius until it engulfs another This volume first published in 2006 discusses the statistics of binary stars the evolution of single stars and several of the most important kinds of interaction between two and even three or more stars Some of the interactions discussed are Roche lobe overflow tidal friction gravitational radiation magnetic activity driven by rapid rotation stellar winds magnetic braking and the influence of a distant third body on a close binary orbit A series of mathematical appendices gives a concise but full account of the mathematics of these processes **Principles and Perspectives in Cosmochemistry** Aruna Goswami, A fundamental question in contemporary astrophysics is the origin of the elements Cosmochemistry seeks to answer when how and where the chemical elements arose Quantitative answers to these fundamental questions require a multi disciplinary approach involving stellar evolution explosive nucleosynthesis and nuclear reactions in different astrophysical environments There remain however many outstanding problems and cosmochemistry remains a fertile area of research This book is among the first in recent times to put together the essentials of cosmochemistry combining contributions from leading astrophysicists in the field The chapters have been organized to provide a clear description of the fundamentals an introduction to modern techniques such as computational modelling and glimpses of outstanding issues *The Politics of Nuclear Weapons in South Asia* Bhumitra Chakma, 2016-02-24 An important and critical re evaluation of South Asia's post tests nuclear politics in contrast to other books this volume emphasises the political dimension of South Asia's nuclear weapons explains how the bombs are used as politico strategic assets rather than pure battlefield weapons and how India and Pakistan utilise them for politico strategic purposes in an extremely complex and competitive South Asian strategic landscape Written by a group of perceptive observers of South Asia this volume evaluates the current state of Indo Pakistani nuclear deterrents the challenges that the two countries confront in building their nuclear forces the post test nuclear doctrines of the two strategic rivals the implications of Indo Pakistani politics for regional cooperation the role of two systemic actors USA and China in the region's nuclear politics and the critical issues of confidence building and nuclear arms control **The Politics of Nuclear Weapons in South Asia** Dr Bhumitra Chakma, 2013-04-28 An important and critical re evaluation of South Asia's post tests nuclear politics in contrast to other books this volume emphasises the political dimension of South Asia's nuclear weapons explains how the bombs are used as politico strategic assets rather than pure battlefield weapons and how India and Pakistan utilise them for politico strategic

purposes in an extremely complex and competitive South Asian strategic landscape Written by a group of perceptive observers of South Asia this volume evaluates the current state of Indo Pakistani nuclear deterrents the challenges that the two countries confront in building their nuclear forces the post test nuclear doctrines of the two strategic rivals the implications of Indo Pakistani politics for regional cooperation the role of two systemic actors USA and China in the region s nuclear politics and the critical issues of confidence building and nuclear arms control Nuclear And Particle Physics With High-intensity Proton Accelerators, Proceedings Of The 25th Ins International Symposium Takeshi K Komatsubara,T Nomura,T Shibata,1998-03-31 Applied mathematics connects the mathematical theory to the reality by solving real world problems and shows the power of the science of mathematics greatly improving our lives Therefore it plays a very active and central role in the scientific world This volume contains 14 high quality survey articles incorporating original results and describing the main research activities of contemporary applied mathematics written by top people in the field The articles have been written in review style so that the researcher can have a quick and thorough view of what is happening in the main subfields of applied mathematics *Mitonuclear Ecology* Geoffrey E. Hill,2019 This novel text provides a concise synthesis of how the interactions between mitochondrial and nuclear genes have played a major role in shaping the ecology and evolution of eukaryotes The foundation for this new focus on mitonuclear interactions originated from research in biochemistry and cell biology laboratories although the broader ecological and evolutionary implications have yet to be fully explored The imperative for mitonuclear coadaptation is proposed to be a major selective force in the evolution of sexual reproduction and two mating types in eukaryotes in the formation of species in the evolution of ornaments and sexual selection in the process of adaptation and in the evolution of senescence The book highlights the importance of mitonuclear coadaptation to the evolution of complex life and champions mitonuclear ecology as an important subdiscipline in ecology and evolution Evolutionary Feedbacks Between Population Biology and Genome Architecture Tariq Ezaz,Scott V. Edwards,2018-12-06 This eBook presents all 10 articles published under the Frontiers Research Topic Evolutionary Feedbacks Between Population Biology and Genome Architecture edited by Scott V Edwards and Tariq Ezaz With the rise of rapid genome sequencing across the Tree of Life challenges arise in understanding the major evolutionary forces influencing the structure of microbial and eukaryotic genomes in particular the prevalence of natural selection versus genetic drift in shaping those genomes Additional complexities in understanding genome architecture arise with the increasing incidence of interspecific hybridization as a force for shaping genotypes and phenotypes A key paradigm shift facilitating a more nuanced interpretation of genomes came with the rise of the nearly neutral theory in the 1970s followed by a greater appreciation for the contribution of nonadaptive forces such as genetic drift to genome structure in the 1990s and 2000s The articles published in this eBook grapple with these issues and provide an update as to the ways in which modern population genetics and genome informatics deepen our understanding of the subtle interplay between these myriad forces From intraspecific to

macroevolutionary studies population biology and population genetics are now major tools for understanding the broad landscape of how genomes evolve across the Tree of Life This volume is a celebration across diverse taxa of the contributions of population genetics thinking to genome studies We hope it spurs additional research and clarity in the ongoing search for rules governing the evolution of genomes *Pakistan's Pathway to the Bomb* Mansoor Ahmed,2022-05-01 In *Pakistan's Pathway to the Bomb* author Mansoor Ahmed provides a groundbreaking account of Pakistan's rise as a nuclear power By drawing on elite interviews and previously untapped primary sources Ahmed reveals how bureaucratic politics shaped the nuclear program's development and where it stands today **Cold Rivals** Evan S. Medeiros,2023 *Cold Rivals* brings together a distinguished group of scholars from the United States and China to examine the new era of strategic competition in US China relations The two countries are now competitors locked in a long term rivalry but how volatile the rivalry will become is still to be determined The book explores not only the historical roots and contemporary foreign policy aspects of this era but the volume also looks at the economic military and technological arenas of US China strategic competition In doing so this volume highlights important differences in US and Chinese perspectives A final section of the volume explores future scenarios for the relationship from different perspectives but with all of them coming to the sobering conclusion about a future marked by expanding differences growing tensions economic disengagement and pressures for a global competition This policy relevant book provides a comprehensive overview of US China strategic competition and reinvigorates thinking about how to avoid reaching a crisis point **Energy Research Abstracts** ,1983 **Routledge Handbook of the International Relations of South Asia** Šumit Ganguly, Frank O'Donnell,2022-10-28 This handbook offers a comprehensive overview of the international relations of South Asia South Asia as a region is increasingly assuming greater significance in global politics for a host of compelling reasons This volume offers the most comprehensive collection of perspectives on the international politics of South Asia and it covers an extensive range of issues spanning from inter state wars to migration in the region Each contribution provides a careful discussion of the four major theoretical approaches to the study of international politics Realism Constructivism Liberalism and Critical Theory In turn the chapters discuss the relevance of each approach to the issue area addressed in the book The volume offers coverage of the key issues under four thematic sections Theoretical Approaches to the Study of the International Relations of South Asia Traditional and Emerging Security Issues in South Asia The International Relations of South Asia Cross cutting Regional Issues Further every effort has been made in the chapters to discuss the origins evolution and future direction of each issue This book will be of much interest to students of South Asian politics human security regional security and International Relations in general **Strategic Studies** Thomas Mahnken, Joseph Maiolo,2014-01-10 The second edition of *Strategic Studies A Reader* brings together key essays on strategic theory by some of the leading contributors to the field This revised volume contains several new essays and updated introductions to each section The volume comprises hard to find classics in the field as well as the latest scholarship The aim

is to provide students with a wide ranging survey of the key issues in strategic studies and to provide an introduction to the main ideas and themes in the field The book contains six extensive sections each of which is prefaced by a short introductory essay The Uses of Strategic Theory Interpretation of the Classics Instruments of War Intelligence and Deception Nuclear Strategy Irregular Warfare and Small Wars Future Warfare Future Strategy Overall this volume strikes a balance between theoretical works which seek to discover generalisations about the nature of modern strategy and case studies which attempt to ground the study of strategy in the realities of modern war This new edition will be essential reading for all students of strategic studies security studies military history and war studies as well as for professional military college students

Nonlinear Waves and Solitons on Contours and Closed Surfaces Andrei Ludu, 2007-09-09 Everything the Power of the World does is done in a circle The sky is round and I have heard that the earth is round like a ball and so are all the stars The wind in its greatest power whirls Birds make their nests in circles for theirs is the same religion as ours The sun comes forth and goes down again in a circle The moon does the same and both are round Even the seasons form a great circle in their changing and always come back again to where they were The life of a man is a circle from childhood to childhood And so it is everything where power moves Black Elk 1863 1950 Nonlinearity is a captivating manifestation of the observable Universe whose importance has increased over the decades and has found more and more elds of application ranging from elementary particles nuclear physics biology wave dynamics at any scale uids plasmas to astrophysics The central character of this 172 year old story is the soliton Namely a localized pulse traveling without spreading and having particle like properties plus an in nite number of conservation laws associated to its dynamics In general solitons arise as exact solutions of approximative models There are di ent explanation at di erent levels for the existence of solitons From the experimentalist point of view solitons can be created if the propagation c gurationislongenough narrowenough likelongandshallowchannels ber optics electric lines etc

Fusion Technology 1982 Gyoujin Cho, 2013-10-02 Fusion Technology 1982 Volume 1 contains the proceedings of the 12th Symposium on Fusion Technology held at the J lich Nuclear Research Center in Germany on September 13 17 1982 The symposium provided a forum for assessing the state of the art in nuclear fusion as a source of energy The discussions are organized around the following themes first wall and vacuum systems power supplies divertor technology tritium handling remote handling blanket technology and shielding and safety Comprised of 99 chapters this volume first deals with nuclear fusion and spallation sources for breeding fissile fuel followed by a discussion on the effects of pulsed loads on supply networks The reader is then introduced to key issues for remote inspection and repair of a Tokamak large scale commercial facility for production of elemental tritium and in situ coating of titanium carbide Subsequent chapters explore the use of turbomolecular pumps for plasma fusion experiments alternative for protecting ion sources of neutral injectors against damage from high voltage sparking the effect of capacitive stored energy on neutral beam accelerator performance and cooling of the divertor collector plates in the international Tokamak reactor This monograph

will be of interest to practitioners and research workers engaged in fusion technology **Nonlinear Equations in Physics and Mathematics** P. Barut, 2012-12-06 This is the third Volume in a series of books devoted to the interdisciplinary area between mathematics and physics all emanating from the Advanced Study Institutes held in Istanbul in 1970 1972 and 1977 We believe that physics and mathematics can develop best in harmony and in close communication and cooperation with each other and are sometimes inseparable With this goal in mind we tried to bring mathematicians and physicists together to talk and lecture to each other this time in the area of nonlinear equations The recent progress and surge of interest in nonlinear ordinary and partial differential equations has been impressive At the same time novel and interesting physical applications multiply There is a unifying element brought about by the same characteristic nonlinear behavior occurring in very widely different physical situations as in the case of solitons for example This Volume gives we believe a very good indication over all of this recent progress both in theory and applications and over current research activity and problems The 1977 Advanced Study Institute was sponsored by the NATO Scientific Affairs Division The University of the Bosphorus and the Turkish Scientific and Technical Research Council We are deeply grateful to these Institutions for their support and to lecturers and participants for their hard work and enthusiasm which created an atmosphere of lively scientific discussions

Accretion Processes in Astrophysics Ignacio González Martínez-Pas, Tariq Shahbaz, Jorge Casares Velázquez, 2014-02-17 It has been more than fifty years since the first significant paper on accretion flows was written In recent years X ray satellites capable of identifying accretion disks and radiation jets indications that accretion has taken place have significantly advanced our understanding of these phenomena This volume presents a comprehensive and up to date introduction to the major theoretical and observational topics associated with accretion processes in astrophysics Comprising lectures presented at the twenty first Winter School of the Canary Islands Institute of Astrophysics the text emphasises the physical aspects of accretion investigating how radiation jets are produced how accretion power is divided between jets and radiated energy the geometry of accretion flow and the accretion processes of active galactic nuclei Written by an international team of experienced scientists chapters offer young researchers key analytical tools for supporting and carrying out the next generation of front line research Double Stars, Physical Properties and Generic Relations B. Hidayat, Zdenek

Kopal, Jürgen H. Rahe, 2012-12-06 The Bosscha Observatory in Lembang Java Indonesia celebrated in 1983 its 60th anniversary Since its foundation the physical properties of binary systems have formed a major research topic of this observatory Until 1970 the study of visual binaries and the determination of orbits received most emphasis Since then also the evolution of close binary systems such as X ray binaries Wolf Rayet binaries and binary pulsars has been researched with priority in Lembang It seemed thus appropriate that a Colloquium devoted to the study of binary systems be held in Lembang at the time of the Observatory's anniversary In the Colloquium the role of wide double and multiple systems received special emphasis not only because of the long tradition of visual binary research at Lembang but also because their role in

documenting stellar evolution has been largely overlooked in recent decades and needs to be brought into focus with the information forthcoming from close binaries The Colloquium covered the physical properties of visual as well as close binary systems and their generic relations in the broadest possible sense It was sponsored by the International Astronomical Union as IAU Colloquium No 80 Double Stars Physical Properties and Generic Relations After the official opening ceremony the meeting started with a discussion on the future of astronomy in Asia The scientific sessions began with the V Bappu Memorial Lecture on the Evolution of Binary Systems presented by Z Kopal
