Nuclear Witnesses Insiders Speak Out:

Nuclear Witnesses Leslie J. Freeman, 1982-02-17 Contains taped interviews with sixteen individuals relating their experiences with nuclear power events that have caused them to become opponents to this energy source *Under the Cloud* Richard Lee Miller, 1986 In a chilling documentary history of America's above ground nuclear tests conducted during the 1950s and early 1960s Miller takes on the subject and universalizes it at the same time giving it the flavor of a Dos Passos novel Kirkus Reviews **The Rise of Nuclear Fear** Spencer R. Weart, 2012-03-19 After the Fukushima Nuclear Power Plant had a meltdown protesters around the world challenged nuclear power Climate change has never aroused this visceral dread Weart dissects this paradox showing that powerful images surrounding nuclear energy hold us captive allowing fear rather than facts to drive our thinking and public policy *Justice Without Frontiers* C.G. Weeramantry, 2023-12-11 This work an important bridge between the worlds of science and law is one of a series but may be purchased separately It is one of the most detailed studies thus far on the interrelationship of science and technology with the growing discipline of human rights Apart from general perspectives it also deals specifically with the obligations of doctors engineers nuclear scientists computer technologists genetic engineers genetic counsellors mining technologists and others No library of science medicine engineering or technology of any description should be without it for it provides an irreducible minimum of human rights knowledge without which these disciplines cannot function in the next century with due regard to their social and human rights implications Not all scientists will agree with all the author's views but he poses them challengingly and brings into the open a number of major issues which can no longer be ignored The volume is a plea for an interdisciplinary and broad based approach to scientific problems scientific education and continuing education of scientists It places the scientific endeavour in its overall social and human rights context in a manner which neither students of science nor established scientists can ignore With an approach which is both imaginative and practical it explores the future of scientific endeavour in a humanistic perspective **A Little Matter of Genocide** Ward Churchill, 1997 Ward Churchill has achieved an unparalleled reputation as a scholar activist and analyst of indigenous issues in North America Here he explores the history of holocaust and denial in this hemisphere beginning with the arrival of Columbus and continuing on into the present He frames the matter by examining both revisionist denial of the Nazi perpetrated Holocaust and the opposing claim of its exclusive uniqueness using the full scope of what happened in Europe as a backdrop against which to demonstrate that genocide is precisely what has been and still is carried out against the American Indians Churchill lays bare the means by which many of these realities have remained hidden how public understanding of this most monstrous of crimes has been subverted not only by its perpetrators and their beneficiaries but by the institutions and individuals who perceive advantages in the confusion In particular he outlines the reasons underlying the United States's 40 year refusal to ratify the Genocide Convention as well as the implications of the attempt to exempt itself from compliance when it finally offered its endorsement

In conclusion Churchill proposes a more adequate and coherent definition of the crime as a basis for identifying punishing and preventing genocidal practices wherever and whenever they occur Ward Churchill enrolled Keetoowah Cherokee is Professor of American Indian Studies with the Department of Ethnic Studies at the University of Colorado Boulder A member of the American Indian Movement since 1972 he has been a leader of the Colorado chapter for the past fifteen years Among his previous books have been *Fantasies of a Master Race* *Struggle for the Land Since Predator Came* and *From a Native Son*

Connecting to the Living History of Radiation Exposure Jacob Hamblin, Linda M. Richards, 2022-11-14 This book highlights the multiple ways of telling stories of radiation exposure they include stories about Japan Australia the United States the Canadian Arctic and more and they probe the framing of major incidents such as Three Mile Island Chernobyl and Fukushima All the chapters in this book are written by authors who participated in our work at Oregon State University and have benefited from hearing not only from scientists but also from those whose lives were directly affected by the history of radiation exposure The question What is at stake when researching and narrating the histories of radiation exposure is discussed but the book does not reinforce existing frameworks such as legal decisions or government policies but rather highlights what narrative framings accomplish and commit by scrutinizing them with rigorous research varied approaches and above all listening to those whose lives were most affected by exposure Previously published in *Journal of the History of Biology* Volume 54 issue 1 April 2021

Nuclear Fear Spencer R. Weart, Spencer R. Weart, 2009-06-30 Our thinking is inhabited by images images of sometimes curious and overwhelming power The mushroom cloud weird rays that can transform the flesh the twilight world following a nuclear war the white city of the future the brilliant but mad scientist who plots to destroy the world all these images and more relate to nuclear energy but that is not their only common bond Decades before the first atom bomb exploded a web of symbols with surprising linkages was fully formed in the public mind The strange kinship of these symbols can be traced back not only to medieval symbolism but still deeper into experiences common to all of us This is a disturbing book it shows that much of what we believe about nuclear energy is not based on facts but on a complex tangle of imagery suffused with emotions and rooted in the distant past *Nuclear Fear* is the first work to explore all the symbolism attached to nuclear bombs and to civilian nuclear energy as well employing the powerful tools of history as well as findings from psychology sociology and even anthropology The story runs from the turn of the century to the present day following the scientists and journalists the filmmakers and novelists the officials and politicians of many nations who shaped the way people think about nuclear devices The author a historian who also holds a Ph D in physics has been able to separate genuine scientific knowledge about nuclear energy and radiation from the luxuriant mythology that obscures them In revealing the history of nuclear imagery Weart conveys the hopeful message that once we understand how this imagery has secretly influenced history and our own thinking we can move on to a clearer view of the choices that confront our civilization Table of Contents Preface Part One Years of Fantasy 1902 1938 1 Radioactive Hopes White Cities of

Collapse of an Industry John L. Campbell, 2019-01-24 The commercial nuclear power industry was flourishing in the United States in the early 1970s fifteen years later the enterprise had collapsed John L. Campbell examines the history of this debacle in order to explore how state and market shape each other under modern capitalism In *Collapse of an Industry* Campbell confronts controversial issues whose implications range far beyond the specifics of the nuclear power industry the relative merits of free and controlled markets the reliability of industrial planning and the appropriate role of the state in managing economic activity Ultimately Campbell sheds light on the central question of whether modern democracy and capitalism may be essentially incompatible A complex expensive and potentially very dangerous technology nuclear energy requires careful long range planning to sustain commercial success Campbell s narrative account shows how political and economic institutions unique to the United States made the nuclear energy industry particularly vulnerable to a series of policy failures that undermined that planning Drawing on industry histories and trade publications government documents and personal interviews he considers four key areas central to the collapse of the sector competition and the failure to standardize equipment growing public concern over reactor safety and the disposal of radioactive waste the industry s financial crisis and the complex politics of regulation Campbell argues that the democratic institutions of the contemporary United States will not support the predictable conditions needed for accumulation in so capital intensive and potentially hazardous a sector as commercial nuclear power He emphasizes the importance of institutional forms to the making of public policy by contrasting the industry s demise in the United States with its modest successes in Western Europe demonstrating how variations in important governmental and private institutions affected the general health of the industry in France Sweden and West Germany A theoretically informed analysis free of the usual
