## **Nucleic Acid Probes:**

**Nucleic Acid Probes** Robert H. Symons, 1989-03-31 With each chapter written by a distinguished expert in the biochemistry field this comprehensive volume describes the preparation and use of a variety of radioactive and non radioactive probes in situations ranging from research laboratories to routine diagnosis laboratories The enzymatic and chemical techniques for labeling nucleic acid probes with radioisotopes and with non radioactive ligands and haptens are discussed Additionally the associated methods for their detection the use of these probes in the diagnosis of human and microbial pathogens of plant viruses and viroids and of human genetic disorders as well as in the detection of nucleic acids in tissues and cells by in situ hybridization are presented *Hybridization with Nucleic Acid Probes, Part II* P.

Tijssen, 1993-10-21 Recent breakthroughs in recombinant DNA technology and the availability of sophisticated equipment accessible to almost any laboratory have contributed to the development and perfection of powerful hybridization tools Recently nucleic acid hybridization has not only become a cornerstone in molecular biology research but also a powerful supplement to other diagnostic tools These diagnostic methods are set out in a logical and clear two part volume in this now famous Laboratory Techniques series The volume is divided into theory and preparation Part I and probe labelling and hybridization techniques Part II Both parts are worthy additions to this series designed for easy access of information on the laboratory bench Nucleic Acid Hybridization M.L.M. Anderson, 2020-08-26 First published in 1998 This book is targeted

at the beginner who has little or no knowledge of the principles or practice of hybridization This text concentrates on solution and filter hybridization with a final chapter on current developments which includes DNA chips and advances in probe design

Nonisotopic Dna Probe Techniques Larry Kricka, 1992-03-30 Nonisotopic Dna Probe Techniques *Fluorescent Energy Transfer Nucleic Acid Probes* Vladimir V. Didenko, 2008-02-04 Fluorescent nucleic acid probes which use energy transfer include such constructs as molecular beacons molecular break lights Scorpion primers TaqMan probes and others These probes signal detection of their targets by changing either the intensity or the color of their fluorescence Not surprisingly these luminous multicolored probes carry more flashy names than their counterparts in the other fields of molecular biology In recent years fluorescent probes and assays which make use of energy transfer have multiplied at a high rate and have found numerous applications However in spite of this explosive growth in the field there are no manuals summarizing different protocols and fluorescent probe designs In view of this the main objective of *Fluorescent Energy Transfer Nucleic Acid Probes Designs and Protocols* is to provide such a collection Oligonucleotides with one or several chromophore tags can form fluorescent probes capable of energy transfer Energy transport within the probe can occur via the resonance energy transfer mechanism also called F rster transfer or by non F rster transfer mechanisms Although the probes using F rster transfer were developed and used first the later non F rster based probes such as molecular beacons now represent an attractive and widely used option The term fluorescent energy transfer probes in the title of this book covers both F rster based

fluorescence resonance energy transfer FRET probes and probes using non FRET mechanisms Energy transfer probes serve as molecule size sensors changing their fluorescence upon detection of various DNA reactions
