Protecting Rain Forests:

Protecting Earth's Rain Forests Anne Welsbacher, 2015-08-01 From brilliantly colored birds and wild elephants to towering trees and exotic flowers rain forests are home to more than half of Earth's plants and animals. People living in rain forests depend on this vast array of life and Earth itself relies on the world's rain forests to keep our climate and atmosphere in balance. But rain forests around the world are under threat. Once rain forests covered nearly 14 percent of Earth but now they have shrunk to less than half that size. People around the globe are joining the quest to save rain forests. With engaging text and eye-catching images plus a special Going Green section this book tells you all about Earth's rain forests and what you can do to protect them. *Protecting Rain Forests* Moira Butterfield, 2006 Provides an overview of the world's precious rain forests and the unique creatures and plants that live there. Also examines current threats to the rain forests' survival and explains what is being done to protect them. **Protecting Earth's Rain Forests** Anne Welsbacher, 2008-09-01 Explores the causes of current environmental problems particularly on our rain forests and discusses new trends, technology, and new solutions. **Protecting Rain Forest Animals** Lauren Kukla, 2017-01-01 Young readers will love learning about animals and their habitat with *Protecting Rain Forest Animals*. This book explores rain forests, the animals that live there like spiders and sloths, and conservationists like Jane Goodall that work to protect animals. Bright full-page photos of wildlife and easy-to-read text fill the pages of this fun title. Aligned to Common Core Standards and correlated to state standards. Applied to STEM Concepts of Learning Principles. Sandcastle is an imprint of Abdo Publishing, a division of ABDO. **The Conservation Atlas of Tropical Forests** N. Mark Collins, 1991-06-18 The first of a series designed to cover all tropical rain forests in the world. This is a visual portfolio of detailed maps of Asia accompanied by a text which seeks to analyze the extent and causes of deforestation and to point a way towards sustainable forest development. *The Tropical Rain Forest* Marius Jacobs, 2012-12-06 In recent years tropical forests have received more attention and have been the subject of greater environmental concern than any other kind of vegetation. There is an increasing public awareness of the importance of these forests not only as a diminishing source of countless products used by mankind nor for their effects on soil stabilization and climate but as unrivalled sources of what today we call biodiversity. Threats to the continued existence of the forests represent threats to tens of thousands of species of organisms, both plants and animals. It is all the more surprising therefore that there have been no major scientific accounts published in recent years since the classic handbook by Paul W. Richards, *The Tropical Rain Forest* in 1952. Some excellent popular accounts of tropical rain forests have been published including Paul Richards's *The Life of the Jungle* and Catherine Caulfield's *In the Rainforest and Jungles* edited by Edward Ayensu. There have been numerous, often conflicting, assessments of the rate of conversion of tropical forests to other uses and explanations of the underlying causes and in 1978 UNESCO/UNEPI/FAO published a massive report *The Tropical Rain Forest* which although full of useful information is highly selective and does not fully survey the enormous diversity of the forests. **Tropical Rain**

Forest Habitats Barbara Taylor, 2006-12-30 Describes various animals of the rain forest and where they live discussing species diets hunting defenses and life cycles and the structure of the ecosystem and also explores people of the rain forest and conservation

The Conservation Atlas of Tropical Forests Jeffrey Sayer, 1992-06-18 Recognizing that sound information is vital to the progress of conservation IUCN have gathered together a visual portfolio of maps of rain forests in Africa The accompanying text analyzes the extent and causes of deforestation and points a way towards sustainable forest development

Tropical Rain Forest: A Wider Perspective F.B. Goldsmith, 2012-12-06 The international perspective for this book is the unprecedented level of concern over deforestation recognized by the meeting of world leaders at the 1992 Earth Summit in Rio de Janeiro and culminating in the appointment of the Intergovernmental Panel on Forests IPF under the auspices of the UN Commission on Sustainable Development The wide range of issues covered by the authors in this volume reflects the breadth of the international debate from national policies and activist campaigning through economic and social objectives to the sustainable management of forest and soil resources Since the conservation campaigns of the 1980s the focus of international concern has widened from tropical rain forests to all forest formations in all regions with increased recognition of global values and common responsibilities However while forest cover in some temperate countries is increasing irrational deforestation at historically unprecedented levels of damage to biodiversity and to other environmental values remains most acute in tropical countries where the need to use the natural resources for sustainable development is greatest and the capability weakest While accepting the urgency of the situation and the need for greater coherence of action at a global level the 1997 report of the IPF to the UN Commission emphasized the powers and responsibilities of national governments and the importance of National Forest Programmes but with the fuller participation of local communities and with enhanced access to international assistance

Conserving Biological Diversity in Managed Tropical Forests Jill M. Blockhus, 1992 At the meeting of the International Tropical Timber Organization held in Bali in 1990 ITTO adopted the target of ensuring that all tropical timber marketed internationally should by the year 2000 come from forests that are managed sustainably This study is an attempt to determine whether the member countries of the

ITTO have a legal and administrative basis for managing their production forests in ways which will allow these forests to contribute to biological diversity conservation. It also attempts to assess the extent to which such management is already applied on the ground through member country studies. A set of guidelines on ways in which management of production forests could be improved is included. Tropical Rain Forest Ecology, Diversity, and Conservation Jaboury Ghazoul, Douglas Sheil, 2024-03-14. Rain forests represent the world's richest repository of terrestrial biodiversity and play a major role in regulating the global climate. They support the livelihoods of a substantial proportion of the world's population and are the source of many internationally traded commodities. They remain, despite decades of conservation attention, increasingly vulnerable to degradation and clearance with profound though often uncertain future costs to global society. Understanding the ecology of these diverse biomes and peoples' dependencies on them is fundamental to their future management and conservation. Tropical Rain Forest Ecology Diversity and Conservation introduces and explores what rain forests are, how they arose, what they contain, how they function, and how humans use and impact them. The book starts by introducing the variety of rain forest plants, fungi, microorganisms, and animals, emphasising the spectacular diversity that is the motivation for their conservation. The central chapters describe the origins of rain forest communities, the variety of rain forest formations, and their ecology and dynamics. The challenge of explaining the species richness of rain forest communities lies at the heart of ecological theory and forms a common theme throughout. The book's final section considers historical and current interactions of humans and rain forests. It explores biodiversity conservation as well as livelihood security for the many communities that are dependent on rain forests, inextricable issues that represent urgent priorities for scientists, conservationists, and policy makers. Tropical Forests Padmini Sudarshana, Madhugiri Nageswara-Rao, Jaya Soneji, 2018-08-01. Tropical forests occupy only one tenth of the world's land area but are home to more than half of the world's flora and fauna. They comprise an extremely complex labyrinth of ecological interactions. The astounding richness and biodiversity of tropical forests are rapidly dwindling. There is a fear that the burgeoning human population and industrialization, where a majority of these tropical forests are found, may lead to the clearing or modification or may be a complete disappearance of the remaining tropical forests within few decades. This has severely altered the vital biogeochemical cycles of carbon, phosphorus, nitrogen, and so on, and has led to the change in global climate and pristine natural ecosystems. Hence, there is an urgent need to protect, restore, conserve, and improve the forest resources before they are irrevocably lost. In this second edition of the book Tropical Forests, the chapters share the above issues and help in understanding, educating, and creating awareness on the role of tropical forests for the very survival of mankind, climate change, and the diversity of biota across the globe. This book will be of great use and could be useful to students, scientists, ecologists, population, and conservation biologists, and forest managers across the globe. Conservation and Management of Tropical Rainforests, 2nd Edition Eberhard F Bruenig, 2016-12-07. This new edition of Conservation and Management of

Tropical Rainforests applies the large body of knowledge experience and tradition available to those who study tropical rainforests Revised and updated in light of developments in science technology economics politics etc and their effects on tropical forests it describes the principles of integrated conservation and management that lead to sustainability identifying the unifying phenomena that regulate the processes within the rainforest and that are fundamental to the ecosystem viability Features of the natural forest and the socio cultural ecosystems which can be mimicked in the design of self sustaining forests are also discussed A holistic approach to the management and conservation of rainforests is developed throughout the book The focus on South East Asian forestry will be widened to include Africa and Latin America Recent controversial issues such as biofuels and carbon credits with respect to tropical forests and their inhabitants will be discussed This book is a substantial contribution to the literature it is a valuable resource for all those concerned with rainforests *Environmental Education in the Schools* Judy Braus,David Wood,1993
