Neuroimaging Robert A. Zimmerman, Wendell A. Gibby, Raymond F. Carmody, 2012-12-06 Neuroimaging Clinical and Physical Principles is destined to be the new benchmark among text

reference books for neuroradiology Unique among all similar titles is this book's complete coverage of ALL imaging modalities and techniques used in modern neuroimaging from MR including up to the minute developments in fast MR MRA and FLAIR to CT ultrasonography angiography plain film and myelography Many topics that are covered little if at all in standard neuroimaging texts are given complete state of the art descriptions in this book including imaging of the head neck temporal bone orbit and sinuses normal variants imaging of pediatric neurologic diseases and developmental anomalies imaging of trauma to the head brain and spine interventional techniques both intracranial and spinal and sedation of both adult and pediatric patients The book is rounded out with complete coverage of the Physical Principles that underlie modern Computed Tomography and Magnetic Resonance Imaging The ten chapters in this section provide everything the radiologist must know such as the physical basics of MR and CT MR and CT contrast agents and their applications hardware and safety issues image acquisition and artifacts and more Each chapter is organized to provide fast answers to everyday clinical problems Numerous tables and lists summarize imaging protocols and differential diagnoses for rapid reference while the text of each chapter provides a thorough review of the state of the art neuroimaging procedures Chapters reveal potential imaging findings for numerous conditions and direct the reader towards the imaging technique that will reveal the most informative results under each circumstance *MRI of Short- and Ultrashort-T2 Tissues* Jiang Du, Graeme M.

Bydder, 2024-02-21 This book comprehensively covers ultrashort echo time UTE zero echo time ZTE and other magnetic resonance imaging MRI acquisition techniques for imaging of short and ultrashort T2 tissues MRI uses a large magnet and radio waves to generate images of tissues in the body The MRI signal is characterized by two time constants spin lattice relaxation time T1 which describes how fast the longitudinal magnetization recovers to its initial value after tipping to the transverse plane and spin spin relaxation time T2 which describes how fast the transverse magnetization decays Conventional MRI techniques have been developed to image and quantify tissues with relatively long T2s However the body also contains many tissues and tissue components such as cortical bone menisci ligaments tendons the osteochondral junction calcified tissues lung parenchyma iron containing tissues and myelin which have short or ultrashort T2s These tissues are invisible with conventional MRI and their MR and tissue properties are not measurable UTE and ZTE type sequences resolve these challenges and make these tissues visible and quantifiable This book first introduces the basic physics of conventional MRI as well as UTE and ZTE type MRI including radiofrequency excitation data acquisition and image reconstruction A series of contrast mechanisms are then introduced and these provide high resolution high contrast imaging of short and ultrashort T2 tissues A series of quantitative UTE imaging techniques are described for measurement of MR tissue properties proton density T1 T2 T2 T1p magnetization transfer susceptibility perfusion and diffusion Finally clinical applications in the musculoskeletal neurological pulmonary and cardiovascular systems are described This is an ideal guide for physicists and radiologists interested in learning more about the use of UTE and ZTE type techniques for MRI of

short and ultrashort T2 tissues Structured Reporting in Radiology Mansoor Fatehi, Daniel Pinto dos Santos, 2022-02-12 This book provides practitioners and scientists with insights into diverse aspects of structured reporting to allow them to develop tools and a knowledge base to ensure that this electronic reporting trend is widely applied After an introduction to reporting in radiology various parts of structured reporting are discussed in detail including an overview of standardized reporting systems standardized reporting language DICOM structured reporting template based structured reporting and modular reporting The last chapter addresses the interaction of structured reporting with artificial intelligence and its impact on the future of radiology The last chapter addresses the interaction of structured reporting with artificial intelligence and its impact on the future of radiology Endorsed by the European Society of Medical Imaging Informatics EuSoMII the scope of the book is based on the Medical Imaging Informatics sub sections of the European Society of Radiology ESR European Training Curriculum Level I and II It is a valuable resource for residents radiologists and students Reference
