Setting Performance Standards: Concepts, Methods, and Perspectives

Most readers of *Applied Psychological Measurement (APM)* and its sib-publications in education research would have noticed an upsurge of interest during the past two decades or so in topics surrounding the determination of a passing or cut-score or, more broadly, of the practice of standard setting. The impressive work brought together in this volume explains why. At the core of standard setting is the simple question of how to separate in a defensible way one specifiable kind of object from another, given that these objects exhibit a relevant attribute to varying degrees. So broad is this need that it is no wonder that standard setting has been around for a long time, and it is seen in countless essential societal functions, serving a broad spectrum of credentialing purposes necessary to ensure safe products, competent critical and professional services, and equitable allocation of valued resources. But, as it is always the case, the devil is in the details.

For readers of *APM* who may be more familiar with the educational and psychological applications of standard setting, there is ample space devoted to the problems of setting performance standards in various assessment contexts. In current standards-based public education reform, after agreeing on a set of content standards, setting reasonable and defensible performance standards is the one other step that infuses practical or policy relevance for various ranges of performance on a test. In the process, an otherwise "routine" process of estimating a cut-score is made a lot more intriguing due to a mix of technical demands and policy pressures.

Organization and Contents

The volume is organized in three parts, reflecting a very sensible ordering of its goals. Part I lays out the essential arguments for the need to set standards in educational assessment, offering a synopsis of its progress over the past 50 years. The introductory chapter by the editor (Cizek, chapter 1) gives a very succinct statement of the fact that, because standard setting is so vital to so many essential societal processes, the pursuit of its science is necessary. Zieky (chapter 2) provides a review, as only a pioneer in the field can, detailing how in the past 20 years alone the field has changed dramatically as it has staved off challenges to its goals, methods, and procedures. Zieky's refrain, that the core problem for setting a performance standard has remained unchanged, is taken up and much expanded by Kane (chapter 3), who argues very effectively for the role of assembling a multitude of external empirical checks on the impact of any cut-score to detect gross flaws and unintended consequences in the standards that are set. Hambleton (chapter 4) illustrates with an

Measuring Literacy National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Board on Testing and Assessment, Committee on Performance Levels for Adult Literacy, 2006-01-13 The National Assessment of Adult Literacy NAAL is a household survey conducted periodically by the Department of Education that evaluates the literacy skills of a sample of adults in the United States ages 16 and older NAAL results are used to characterize adults literacy skills and to inform policy and programmatic decisions The Committee on

Performance Levels for Adult Literacy was convened at the Department's request for assistance in determining a means for booking assessment results that would be useful and understandable for NAAL's many varied audiences. Through a process detailed in the book, the committee determined that five performance level categories should be used to characterize adults' literacy skills: nonliterate in English, below basic literacy, basic literacy, intermediate literacy, and advanced literacy. This book documents the process the committee used to determine these performance categories, estimates the percentages of adults whose literacy skills fall into each category, recommends ways to communicate about adults' literacy skills based on NAAL, and makes suggestions for ways to improve future assessments of adult literacy. **Educational Measurement** Craig S.

Teacher Involvement in High-Stakes Language Testing Daniel Xerri, Patricia Vella Briffa, 2018-04-27 This book advocates that teachers should play an active role in high stakes language testing and that more weight should be given to teacher judgement This is likely to increase the formative potential of high stakes tests and provide teachers with a sense of ownership The implication is that the knowledge and skills they develop by being involved in these tests will feed into their own classroom practices The book also considers the arguments against teacher involvement e g the contention that teacher involvement might entrench the practice of teaching to the test or that teachers should not be actively involved in high stakes language testing because their judgement is insufficiently reliable Using contributions from a wide range of international educational contexts the book proposes that a lack of reliability in teacher judgement is best addressed by means of training and not by barring educators from participating in high stakes language testing It also argues that their involvement in testing helps teachers to bolster confidence in their own judgement and develop their assessment literacy Moreover teacher involvement empowers them to play a role in reforming high stakes language testing so that it is more equitable and more likely to enhance classroom practices High stakes language tests that adopt such an inclusive approach facilitate more effective learning on the part of teachers which ultimately benefits all their students
