**Genes and the Bioimaginary** Deborah Lynn Steinberg, 2016-03-03 *Genes and the Bioimaginary* examines the dramatic rise and contemporary cultural apotheosis of the gene. The book traces not only the genetification of modern life but is also a journey through the complex relationship between science and culture. At the heart of this book are three interlinked questions. The first concerns the paradigmatic transformations of the genetics revolution: how can we understand the impact of genes on social arenas as diverse as law and agriculture, politics and medicine, genealogy and jurisprudence? Second, how has the language of genes come to pervade public discourse as much a trope of personal narrative as of the popular imaginary? And third, how can we gain critical purchase not only on the conditions and consequences of a particular science but on its projective seductions, the terms of its persuasion and the dilemmas and anxieties provoked in its wake? Through a series of illuminating case studies ranging from gay genes to Jew genes to genes for crime from CSI to the Innocence Project from genetics post racial imaginary to its phantasies of redemption, the book examines the emergence of the gene as a pre eminent locus of both scientific and social explanation and as a powerful object of spectacle, projective phantasy and attachment. *Genes and the Bioimaginary* makes a distinctive contribution to our understanding of how knowledge comes to be not only powerful but plausible

*Assessing Ecological Risks of Biotechnology* Lev R. Ginzburg, 2013-10-22 *Assessing Ecological Risks of Biotechnology* presents a comprehensive analysis of ecological risk assessment for biotechnology as viewed predominantly by scientists doing research in this area but also by regulators, philosophers and research managers. The emphasis is on the ecological risks associated with the release of genetically engineered organisms into the environment. The book contains 17 chapters that are organized into four parts. Part I discusses the ecological experience gained from previous biological introductions. Part II explores the ecology and the genetics of microbial communities. Emphasis is given to the transport of microorganisms since one of the major ecological concerns about biotechnology is the danger of the spread of genetically engineered organisms to ecosystems other than the one to which they are released. Part III reviews mathematical models that can be used for ecological risk assessment at four different levels. Part IV concerns the regulation of biotechnology, current research trends and social values

Biochemistry Dr. M. V. Kulkarni, 2008-08-07 *Bodies in Glass* Deborah Lynn Steinberg, 1997 An imaginative and original reappraisal of reproductive science. *Bodies in glass* explores the complex cultural landscape and emergent iconographic bodies of in vitro fertilisation, IVF and medical genetic discourse. Through a compelling deconstruction of medical and legal languages, texts and institutional practices, Deborah Lynn Steinberg traces the convergence of four key logics: authorial, recombinant, embryo protectionist and eugenic, which she argues are embedded in the field of IVF, the textual material processes of erasure and recombination of women's bodies and reproductive fitness
