Setting The Limit Occupational Health Standards And The Limits Of Science:

Setting the Limit Sven Ove Hansson, 1998 Do occupational exposure limits really protect workers from chemical hazards This book gives an in depth analysis of three sets of exposure limits the ACGIH list from the United States which has a world wide influence and the official lists of Germany and Sweden which are both unusually well documented A detailed study of the extensive toxicological documentation offered for these lists makes it possible to calculate the safety margins implicit in the exposure limits The outcome of this analysis is disquieting Even for the Swedish list which has the lowest values in the Western world safety margins are often small or non existent Hansson also proposes new ways to organize exposure limits and to evaluate toxicological data for regulatory purposes **Toxicants, Health and Regulation since 1945** Nathalie Jas, 2015-10-06 The number of substances potentially dangerous to our health and environment is constantly increasing The papers in this volume examine the concurrent rise of pollutants and the regulations designed to police their use

Regulating Chemical Risks Johan Eriksson, Michael Gilek, Christina Rudén, 2010-08-18 This volume presents research on current trends in chemical regulations a fa growing complex and increasingly internationalized field The book grew out from a multidisciplinary research project entitled Regulating Chemical Risks in the Baltic Sea Area Science Politics and the Media led by Michael Gilek at S dert rn University Sweden This research project involved scholars and experts from natural as well as social sciences based at S dert rn University Swedish Royal Institute of Technology KTH Karolinska Institutet and Ume University The project group organized a multidisciplinary research conference on chemical risk regulations held in Stockholm August 15 17 2007 Most of the contributions published in this book were in draft form first presented at this conference The conference like the ensuing edited volume expanded the geographical focus beyond the Baltic Sea area to include wider European and to some extent also global trends Many thanks to all project colleagues and conference participants We are very grateful for the generous financial support received from The Foundation for Baltic and East European Studies stersj stiftelsen The Swedish Research Council Formas and from S dert rn University Without this support the present book would not have been possible Special thanks to all of our fellow contributors all of whom have submitted to cal papers based on high quality research Many thanks also to Tobias Evers who assisted us with technical editing Finally we are grateful for the professionalism shown by our editors at Springer **Arguing About Science** Alexander Bird, James Ladyman, 2012-11-12 Arguing About Science is an outstanding engaging introduction to the essential topics in philosophy of science edited by two leading experts in the field This exciting and innovative anthology contains a selection of classic and contemporary readings that examine a broad range of issues from classic problems such as scientific reasoning causation and scientific realism to more recent topics such as science and race forensic science and the scientific status of medicine The editors bring together some of the most influential contributions of famous philosophers in the field including John Stuart Mill and Karl Popper as well as more recent extracts from philosophers and scientists such as Ian Hacking Stephen Jay Gould

Bas van Fraassen Nancy Cartwright and John Worrall The anthology is organised into nine clear sections science non science and pseudo science race gender and science scientific reasoning scientific explanation laws and causation science and medicine probability and forensic science risk uncertainty and science policy scientific realism and anti realism The articles chosen are clear interesting and free from unnecessary jargon The editors provide lucid introductions to each section in which they provide an overview of the debate as well as suggestions for further reading *From Critical Science to Solutions* Richard Clapp, 2017-03-02 First Published in 2017 In this volume the editor collected articles that primarily appeared in the Scientific Solutions section of *New Solutions A Journal of Environmental and Occupational Health Policy* The articles in the book are grouped into three general categories starting with Critical Science These articles are primarily critiques of how science is done or how science is incorporated into public health policy in the United States and elsewhere The second category is what I have called Precautionary Science These articles such as the ones by Dement on asbestos and Solomon and colleagues on the risks of manganese essentially call for precautionary regulations to reduce exposures where there is substantial but in the eyes of some less than definitive scientific knowledge The final category is Solutions Science In some ways this represents the current stage of precautionary science where we have begun to look at larger societal issues and have moved beyond traditional scientific approaches and critiques

Roland Ortt, David van Putten, Linda M. Kamp, Ibo van de Poel, 2020-03-04 Large technological systems such as seaports nuclear power stations wind farms and natural gas extraction provide vital functions for society And yet these large technological systems have an impact on different stakeholder groups in both positive and negative ways This book defines responsible innovation and describes how both the innovation process and the resulting innovation outcome can be designed created and implemented in a way that respects the various stakeholder groups involved and affected by the system Taking a case based approach a number of large technological systems are profiled including hydraulic engineering nuclear energy smart metering and wind power The values of each of the stakeholder groups and the costs and benefits of the systems presented are analysed The book concludes by combining these insights to provide a framework for how responsible innovation of large technological systems can be implemented in practice The book will be of particular interest to undergraduate and postgraduate students and researchers in technology and innovation management and corporate governance CSR and business ethics **Nanotechnology Challenges** Joachim Schummer, Davis Baird, 2006 This book introduces the latest methods for the controlled growth of nanomaterial systems The coverage includes simple and complex nanomaterial systems ordered nanostructures and complex nanostructure arrays and the essential conditions for the controlled growth of nanostructures with different morphologies sizes compositions and microstructures The book also discusses the dynamics of controlled growth and thermodynamic characteristics of two dimensional nanorestricted systems The authors introduce various novel synthesis methods for nanomaterials and nanostructures such as hierarchical growth heterostructures growth doping growth and some developing template synthesis methods In addition to discussing applications the book reviews developing trends in nanomaterials and nanostructures *Residues* Soraya Boudia, Angela N. Risk Management in Post-Trust Societies Ragnar E. Lofstedt, 2012-05-04 A thought provoking and invaluable book for anyone who cares about risk communication and management in the 21st century Anna Jung Director General European Food Information Council Professor Ragnar Lfstedt has once again produced a most interesting book on risk management and trust well based on theory and built on empirical findings Mikael Karlsson President Swedish Society for Nature Conservation Highlights the difficult balancing task facing risk regulators Regulatory inaction against real risks can undermine public trust However exaggerated responses to risks can also jeopardize regulators credibility The diverse international case studies developed by Ragnar Lfstedt provide guidance for how regulators can navigate these and other frequently competing concerns W Kip Viscusi Cogan Professor of Law and Economics Harvard University USA In democracies government policies cannot succeed without public acceptance Yet complex risk management requires technical expertise How to reconcile these competing needs Ragnar Lfstedt provocatively challenges recent research claiming that risk managers must engender public trust via deliberative dialogue He uses four cases studies to argue that the reasons for distrust vary and demand different responses that in some cases trust can flow from technical competence without public deliberation and that in others public deliberation can actually aggravate distrust Trust me Lfstedts book will add spice to the debate over risk experts the public and trust Jonathan B Wiener Perkins Professor of Law and Environmental Policy Duke University USA We live in post trust societies in which public confidence in governments and corporations over health food and environmental risk is eroding rapidly Good risk communication can help companies governments and institutions minimize disputes resolve issues and anticipate problems Without such communication the best policies can become derailed and trust can be lost Most policy makers still use outdated methods to communicate policies and achieve their objectives methods developed before public trust in industry and government was affected by health scares such as BSE genetically modified organisms and dioxins in Belgian chicken This book provides effective methods for managing and communicating risk effectively in contemporary societies
