Settlement of Shallow Foundations on Cohesionless Soils William O. Martin, **Settlement of Shallow Foundations on Cohesionless Soils** William O. Martin, 1986 Settlement of Shallow Foundations on Cohesionless Soils William O. Martin, 1986 Foundation Engineering Handbook Hsai-Yang Fang, 2013-06-29 More than ten years have passed since the first edition was published During that period there have been a substantial number of changes in geotechnical engineering especially in the applications of foundation engineering As the world population increases more land is needed and many soil deposits previously deemed unsuitable for residential housing or other construction projects are now being used Such areas include problematic soil regions mining subsidence areas and sanitary landfills To overcome the problems associated with these natural or man made soil deposits new and improved methods of analysis design and implementation are needed in foundation construction As society develops and living standards rise tall buildings transportation facilities and industrial complexes are increasingly being built Because of the heavy design loads and the complicated environments the traditional design concepts construction materials methods and equipment also need improvement Further recent energy and material shortages have caused additional burdens on the engineering profession and brought about the need to seek alternative or cost saving methods for foundation design and construction

Borden, 1995-01-01 Proceedings of sessions of the ASCE Annual Convention held in San Diego California October 23 27 1995 Sponsored by the Committee on Grouting of the Geo Institute of ASCE This Geotechnical Special Publication contains a report and seven juried papers on verification of geotechnical grouting The report discusses planning for a grouting verification program surveys grouting methods and verification methods and describes the selection of verification methods The report also includes a set of charts that indicate the applicability of various verification methods by grouting method goal of grouting and subsurface conditions The juried papers present case histories involving verification of geotechnical grouting

Model Uncertainties in Foundation Design Chong Tang, Kok-Kwang Phoon, 2021-03-17 Model Uncertainties in Foundation Design is unique in the compilation of the largest and the most diverse load test databases to date covering many foundation types shallow foundations spudcans driven piles drilled shafts rock sockets and helical piles and a wide range of ground conditions soil to soft rock All databases with names prefixed by NUS are available upon request This book presents a comprehensive evaluation of the model factor mean bias and coefficient of variation COV for ultimate and serviceability limit state based on these databases These statistics can be used directly for AASHTO LRFD calibration Besides load test databases performance databases for other geo structures and their model factor statistics are provided Based on this extensive literature survey a practical three tier scheme for classifying the model uncertainty of geo structures according to the model factor mean and COV is proposed This empirically grounded scheme can underpin the calibration of resistance factors as a function of the degree of understanding a concept already adopted in the Canadian Highway Bridge

Handbook of Tropical Residual Soils Engineering Bujang B.K. Huat, David G. Toll, Arun Prasad, 2012-05-24 Residual soils are found in many parts of the world Like other soils they are used extensively in construction either to build upon or as construction material They are formed when the rate of rock weathering is more rapid than transportation of the weathered particles by e.g. water gravity and wind which results in a large share of the soil

History of Progress W. Allen Marr, 2003-01-01 Sponsored by the Geo Institute of ASCE This collection of 78 historical papers provides a wide view of the rich body of literature that documents the development of fundamental concepts geotechnical engineering and their application to practical problems From the highly theoretical to the elegantly practical the papers in this one of a kind collection are significant for their contributions to the geotechnical engineering literature Among the writings of more than 60 geotechnical engineering pioneers are several by Karl Terzaghi widely known as the father of soil mechanics R.R. Proctor Arthur Casagrande and Ralph Peck Many of these papers contain information as useful today as when they were first written Others provide great insight into the origins and development of the field and the thought processes of its leaders
