Challenging Climate Change Arne Wossink,2009 Throughout history climate change has been an important driving force behind human behaviour This archaeological study seeks to understand the complex interrelations between that behaviour and climatic fluctuations focussing on how climate affected the social relations between neighbouring communities of occasionally differing nature It is argued that developments in these relations will fall within a continuum between competition on one end and cooperation on the other The adoption of a particular strategy depends on whether that strategy is advantageous to a community in terms of the maintenance of its well being when faced with adverse climate change This model will be applied to northern Mesopotamia between 3000 and 1600 BC Local palaeoclimate proxy records demonstrate that aridity increased significantly during this period Within this geographical chronological and climatic framework this study looks at changes in settlement patterns as an indication of competition among sedentary agriculturalist communities and the development of the Amorite ethnic identity as reflecting cooperation among sedentary and more mobile pastoralist communities
