Navara, 2018-02-01 There is extensive evidence that vertebrates of all classes have the ability to control the sexes of the offspring they produce Despite dramatic differences in the mechanisms by which different taxa determine the initial sex of offspring each group has found its own way of adjusting offspring sex ratios in response to social and environmental cues For example stress is a well known modulator of offspring sex in members of all groups studied to date Food availability and limitation in particular is another common cue that stimulates biases in offspring sex ratios in a wide variety of species Offspring sex can be adjusted at the primary level which occurs prior to conception or at the secondary level during

embryonic development While the mechanistic pathways that ultimately result in sex ratio biases and the developmental time points sensitive to those mechanisms likely differ among taxa the key involvement of steroid hormones in the process of sex ratio adjustment appears to be pervasive throughout This book reviews the systems of sex determination at play in different vertebrate groups summarizes the evidence that members of all vertebrate taxa can facultatively adjust offspring sex and discusses when and how these adjustments can take place Why Do Women Crave More Sex in the Summer? Debus,2016-06-21 From their discovery in the 19th century to the dawn of the Nuclear Age dinosaurs were seen in popular culture as ambassadors of the geological past and as icons of the life through time narrative of evolution They took on a more foreboding character during the Cold War serving as a warning to mankind with the advent of the hydrogen bomb As fears of human extinction escalated during the ecological movement of the 1970s dinosaurs communicated their metaphorical message of extinction urging us from our destructive path Using an eclectic variety of examples this book outlines the three fold evolution of dinosaurs and other prehistoric monsters in pop culture from their poorly understood beginnings to the 21st century

Dinosaurs - Concepts, Histology and Stratigraphy A. S. William,William Antony S. Sarjeant,1993 **A Little Queer Natural History** Josh L. Davis,2024-10-10 Beautifully illustrated and scientifically informed a celebration of the astonishing diversity of sexual behavior and biology found in nature From a pair of male swans raising young to splitgill mushrooms with over 23 000 mating types sex in the natural world is wonderfully diverse Josh L Davis considers how for many different organisms animals plants and fungi included sexual reproduction and sex determination rely on a surprisingly complex interaction among genes hormones environment and chance As Davis introduces us to fascinating biological concepts like

parthenogenesis virgin birth monoecious plants individuals with separate male and female flowers and sex reversed genitals we see turtle hatchlings whose sex is determined by egg temperature butterflies that embody male and female biological tissue in the same organism and a tomato that can reproduce three different ways at the same time Davis also reveals animal and plant behaviors in nature that researchers have historically covered up or explained away like queer sex among Ad lie penguins or bottlenose dolphins and presents animal behaviors that challenge us to rethink our assumptions and prejudices Featuring fabulous sex fluid fishes and ant wasp and bee queens who can choose both how they want to have sex and the sex of their offspring A Little Queer Natural History offers a larger lesson that the diversity we see in our own species needs no justification and represents just a fraction of what exists in the natural world

The Carnivorous Dinosaurs Kenneth Carpenter, 2005-07-07 The meat eating dinosaurs or Theropoda include some of the fiercest predators that ever lived Some of the group s members survive to this day as birds The theropod bird connection has been explored in several recent works but this book presents 17 papers on a variety of other topics It is organized into three parts Part I explores morphological details that are important for understanding theropod systematics Part II focuses on specific regions of theropod anatomy and biomechanics Part III examines various lines of evidence that reveal something about theropods as living creatures The contributors are Ronan Allain Rinchen Barsbold Kenneth Carpenter Karen Cloward Rodolfo A Coria Philip J Currie Peter M Galton Robert Gay Donald M Henderson Dong Huang James I Kirkland Yoshitsugu Kobayashi Eva B Koppelhus Peter Larson Junchang L Lorrie A McWhinney Clifford Miles Ralph E Molnar N Murphy John H Ostrom Gregory S Paul Licheng Qiu J Keith Rigby Jr Bruce Rothschild Christopher B Ruff Leonardo Salgado Frank Sanders Julia T Sankey Judith A Schiebout David K Smith Barbara R Standhardt Kathy Stokosa Darren H Tanke Francois Therrien David Trexler Kelly Wicks Douglas G Wolfe and Lowell Wood
