Behaviour Tamás Székely,Allen J. Moore,Jan Komdeur,2010-11-18 Humans live in large and extensive societies and spend much of their time interacting socially Likewise most other animals also interact socially Social behaviour is of constant fascination to biologists and psychologists of many disciplines from behavioural ecology to comparative biology and sociobiology The two major approaches used to study social behaviour involve either the mechanism of behaviour where it has come from and how it has evolved or the function of the behaviour studied With guest articles from leaders in the field theoretical foundations along with recent advances are presented to give a truly multidisciplinary overview of social behaviour for advanced undergraduate and graduate students Topics include aggression communication group living sexual behaviour and co operative breeding With examples ranging from bacteria to social mammals and humans a variety of research tools are used including candidate gene approaches quantitative genetics neuro endocrine studies cost benefit and phylogenetic analyses and evolutionary game theory **Behavioural Ecotoxicology** Giacomo Dell'Omo,2002-05-22

Behavioural ecotoxicology is an emerging field dealing with the effects of environmental pollutants on the behaviour of animals. Behavioural techniques derived from experimental psychology, behavioural pharmacology and neurotoxicology are applied to detect and characterise changes in animals living in the environment exposed to various pollutants. Behavioural effects are then interpreted in an ecological context considering the long term relevance of these changes at both the individual and population level.

The Woman Composer Jill Halstead, 2017-07-05 Unlike previous anthologizing examinations of women and musical composition, this book concentrates on the reasons why there have been and continue to be so few women composers. Jill Halstead focuses on the experiences of nine composers born in the twentieth century: Avril Coleridge Taylor, Grace Williams, Elizabeth Maconchy, Minna Keal, Ruth Gipps, Antoinette Kirkwood, Enid Luff, Judith Bailey and Bryony Jagger, to explore the physiological, social and political factors that have inhibited women from pursuing careers as composers. Is there a biological argument for inferior female creativity? Do social structures such as marriage serve to restrict potential women composers? Is the gender of a composer reflected in the music they write? If so, how would this manifest itself? The conclusions that are reached are as complex and challenging as the questions that are raised. This powerful and provocative book aims to open up debate on these issues which have all too often been avoided by critics and musicologists whose writings have perpetuated arguments that denigrate women's ability to compose. By confronting these arguments, this study will hopefully begin a reassessment of attitudes towards women and music so that women composers are less of a rarity by the end of the next century.
