## **Sex And Death An Introduction To Philosophy Of Biology:**

**Sex and Death** Kim Sterelny, Paul E. Griffiths, 1999-06-15 Is the history of life a series of accidents or a drama scripted by selfish genes Is there an essential human nature determined at birth or in a distant evolutionary past What should we conserve species ecosystems or something else Informed answers to questions like these critical to our understanding of ourselves and the world around us require both a knowledge of biology and a philosophical framework within which to make sense of its findings In this accessible introduction to philosophy of biology Kim Sterelny and Paul E Griffiths present both the science and the philosophical context necessary for a critical understanding of the most exciting debates shaping biology today The authors both of whom have published extensively in this field describe the range of competing views including their own on these fascinating topics With its clear explanations of both biological and philosophical concepts *Sex and Death* will appeal not only to undergraduates but also to the many general readers eager to think critically about the science of life

*Sex and Death* Kim Sterelny, Paul E. Griffiths, 2024-05-31 Is the history of life a series of accidents or a drama scripted by selfish genes Is there an essential human nature determined at birth or in a distant evolutionary past What should we conserve species ecosystems or something else Informed answers to questions like these critical to our understanding of ourselves and the world around us require both a knowledge of biology and a philosophical framework within which to make sense of its findings In this accessible introduction to philosophy of biology Kim Sterelny and Paul E Griffiths present both the science and the philosophical context necessary for a critical understanding of the most exciting debates shaping biology today The authors both of whom have published extensively in this field describe the range of competing views including their own on these fascinating topics With its clear explanations of both biological and philosophical concepts *Sex and Death* will appeal not only to undergraduates but also to the many general readers eager to think critically about the science of life

*Plato and Sex* Stella Sandford, 2013-04-24 What does the study of Plato's dialogues tell us about the modern meaning of sex How can recent developments in the philosophy of sex and gender help us read these ancient texts anew *Plato and Sex* addresses these questions for the first time Each chapter demonstrates how the modern reception of Plato's works in both mainstream and feminist philosophy and psychoanalytical theory has presupposed a natural biological conception of what sex might mean Through a critical comparison between our current understanding of sex and Plato's notion of *genos* *Plato and Sex* puts this presupposition into question With its groundbreaking interpretations of the *Republic* the *Symposium* and the *Timaeus* this book opens up a new approach to sex as a philosophical concept Including critical readings of the theories of sex and sexuation in Freud and Lacan and relating such theories to Plato's writings *Plato and Sex* both questions our assumptions about sex and explains how those assumptions have coloured our understanding of Plato What results is not only an original reading of some of the most prominent aspects of Plato's philosophy but a new attempt to think through the meaning of sex today

*What Darwin Got Wrong* Jerry Fodor, Massimo Piattelli-Palmarini, 2011-02-24 Jerry Fodor and

Massimo Piatelli Palmarini a distinguished philosopher and scientist working in tandem reveal major flaws at the heart of Darwinian evolutionary theory They do not deny Darwin s status as an outstanding scientist but question the inferences he drew from his observations Combining the results of cutting edge work in experimental biology with crystal clear philosophical argument they mount a devastating critique of the central tenets of Darwin s account of the origin of species The logic underlying natural selection is the survival of the fittest under changing environmental pressure This logic they argue is mistaken They back up the claim with evidence of what actually happens in nature This is a rare achievement the short book that is likely to make a great deal of difference to a very large subject What Darwin Got Wrong will be controversial The authors arguments will reverberate through the scientific world At the very least they will transform the debate about evolution

**The Environmental Uncanny** Brian A. Irwin,2024-06-27 The Environmental Uncanny argues that the increasing destitution of our world is the result of a certain forgetfulness we have forgotten that the basis of our knowledge is not calculative reason but our participation in the natural world The modern built environment is exemplary of this forgetfulness and induces an uncanniness that can help us to understand the nature of our environmental crisis This book offers a unique interdisciplinary perspective on the global environmental crisis Ranging from traditional phenomenology including substantial discussion of both Merleau Ponty and Heidegger to philosophy of biology to architectural and urban design theory to landscape photography it makes illuminating connections to paint a multifaceted picture Tracing the root causes of dwindling biodiversity deforestation and suburban sprawl we can find how might we mark the path back toward a mode of rich inhabitation in a contemporary age In charting out how it is that we are losing our world Irwin offers a thought as to how we might regain it

**The Oxford Handbook of History and Material Culture** Ivan Gaskell,Sarah Anne Carter,2020-04-07 Most historians rely principally on written sources Yet there are other traces of the past available to historians the material things that people have chosen made and used This book examines how material culture can enhance historians understanding of the past both worldwide and across time The successful use of material culture in history depends on treating material things of many kinds not as illustrations but as primary evidence Each kind of material thing and there are many requires the application of interpretive skills appropriate to it These skills overlap with those acquired by scholars in disciplines that may abut history but are often relatively unfamiliar to historians including anthropology archaeology and art history Creative historians can adapt and apply the same skills they honed while studying more traditional text based documents even as they borrow methods from these fields They can think through familiar historical problems in new ways They can also deploy material culture to discover the pasts of constituencies who have left few or no traces in written records The authors of this volume contribute case studies arranged thematically in six sections that respectively address the relationship of history and material culture to cognition technology the symbolic social distinction and memory They range across time and space from Paleolithic to Punk

*Theology, Science and Life* Carmody

Grey, 2023-01-26 Offering a bold intervention in the ongoing debate about the relationship between theology and science *Theology Science and Life* proposes that the strong demarcation between the two spheres is unsustainable theology occurs within and not outside what we call science and science occurs within and not outside theology The book applies this in a penetrating way to the most topical contentious and philosophically charged science of late modernity biology Rejecting the easy dualism of expressions such as theology and science theology or science modern biology is examined so as to illuminate the nature of both In making this argument the book achieves two further things It is the first major English language reception and application of the thought of philosopher Hans Jonas in theology and it makes a decisive contribution to the unfolding reception of Radical Orthodoxy one of the most influential schools in contemporary Anglophone theology *Birth, Death, and Femininity* Sara Heinämaa, 2010-10-25 Issues surrounding birth and death have been fundamental for Western philosophy as well as for individual existence The contributors to this volume unravel the gendered aspects of the classical philosophical discourses on death bringing in discussions about birth creativity and the entire chain of human activity By linking their work to major thinkers such as Heidegger Nietzsche Beauvoir and Arendt and to major philosophical currents such as ancient philosophy existentialism phenomenology and social and political philosophy they challenge prevailing feminist articulations of birth and death These philosophical reflections add an important sexual dimension to current thinking on identity temporality and community **Towards a Theory of Development** Alessandro Minelli, Thomas Pradeu, 2014-05-01 Is it possible to explain and predict the development of living things What is development Articulate answers to these seemingly innocuous questions are far from straightforward To date no systematic targeted effort has been made to construct a unifying theory of development This novel work offers a unique exploration of the foundations of ontogeny by asking how the development of living things should be understood It explores the key concepts of developmental biology asks whether general principles of development can be discovered and examines the role of models and theories The two editors one a biologist with long interest in the theoretical aspects of his discipline the other a philosopher of science who has mainly worked on biological systems have assembled a team of leading contributors who are representative of the scientific and philosophical community within which a diversity of thoughts are growing and out of which a theory of development may eventually emerge They analyse a wealth of approaches to concepts models and theories of development such as gene regulatory networks accounts based on systems biology and on physics of soft matter the different articulations of evolution and development symbiont induced development as well as the widely discussed concepts of positional information and morphogenetic field the idea of a programme of development and its critiques and the long standing opposition between preformationist and epigenetic conceptions of development *Towards a Theory of Development* is primarily aimed at students and researchers in the fields of evo devo developmental biology theoretical biology systems biology biophysics and the philosophy of science **Rethinking Evolutionary Psychology** A. Goldfinch, 2015-02-24

Rethinking Evolutionary Psychology identifies champions and vindicates a streamlined evolutionary psychology. It offers a new way of thinking that moves decisively away from theoretical and critical excess. Where standard accounts often obscure and distort, this book emphasizes and develops evolutionary psychology's heuristic credentials. *George C. Williams and Evolutionary Literacy* Michael P. Cohen, 2022-09-28. In this book, a case study of a humanistic reading of an essential evolutionary theorist, George C. Williams (May 12, 1926–September 8, 2010), the author contends that certain classic works of evolutionary theory and history are the most important nature writing of recent times. What it means to be scientifically literate is essential for humanistic scholars who must ground themselves with literary reading of scientific texts. As the most influential American evolutionary theorist of the second half of the twentieth century, Williams masters critique, frames questions about adaptation and natural selection, and answers in a plain aphoristic writing style. Williams aims for parsimony to recognize adaptation at the level necessitated by the facts and no higher, through a minimalist writing style. This voice articulates a powerful process that operates at very low levels by blind and selfish chance at the expense of its designed products using purely trial and error.

**Queer Environmentality** Robert Azzarello, 2016-04-15. Offering a model for meaningful dialogue between queer studies and environmental studies, Robert Azzarello's book traces a queer environmental lineage in American Romantic and post-Romantic literature. Azzarello challenges the notion that reading environmental literature is unsatisfying in terms of aesthetics and proposes an understanding of literary environmentalism that is rich in poetic complexity. With the term queer environmentality, Azzarello points towards a queer sensibility in the history of environmental literature to balance the dominant narrative that reading environmental literature is tantamount to witnessing a spectacular dramatization of heterosexual teleology. Azzarello's study treats four key figures in the American literary tradition: Henry David Thoreau, Herman Melville, Willa Cather, and Djuna Barnes. Each of these writers problematizes conventional notions of the strange matrix between the human, the natural, and the sexual. They brilliantly demonstrate the ways in which the queer project and the environmental project are always connected or, put another way, show that questions and politics of human sexuality are always entwined with those associated with the other than human world.

**The Origins of Sociable Life: Evolution After Science Studies** M. Hird, 2009-05-29. This ambitious book considers social scientific topics such as identity, community, sexual difference, self, and ecology from a microbial perspective. Harnessing research and evidence from earth systems science and microbiology and particularly focusing on symbiosis and symbiogenesis, the book argues for the development of a microontology of life.

**Explaining Cancer** Anya Plutynski, 2018-07-18. In *Explaining Cancer*, Anya Plutynski addresses a variety of philosophical questions that arise in the context of cancer science and medicine. She begins with the following concerns: How do scientists classify cancer? Do these classifications reflect nature's joints? How do cancer scientists identify and classify early stage cancers? What does it mean to say that cancer is a genetic disease? What role do genes play in mechanisms for cancer? What are the most important environmental causes of cancer and how do

epidemiologists investigate these causes How exactly has our evolutionary history made us vulnerable to cancer Explaining Cancer uses these questions as an entrance into a family of philosophical debates It uses case studies of scientific practice to reframe philosophical debates about natural classification in science and medicine the problem of drawing the line between disease and health mechanistic reasoning in science pragmatics and evidence the roles of models and modeling in science and the nature of scientific explanation Canadian Philosophical Reviews ,2000 Comptes Rendus Philosophiques ,2000

*Origin(s) of Design in Nature* Liz Swan,Richard Gordon,Joseph Seckbach,2012-08-27 Origin s of Design in Nature is a collection of over 40 articles from prominent researchers in the life physical and social sciences medicine and the philosophy of science that all address the philosophical and scientific question of how design emerged in the natural world The volume offers a large variety of perspectives on the design debate including progressive accounts from artificial life embryology complexity cosmology theology and the philosophy of biology This book is volume 23 of the series Cellular Origin Life in Extreme Habitats and Astrobiology www.springer.com series 5775 **Handbook of Paleoanthropology** Winfried Henke,Ian Tattersall,2007-05-10 This 3 volume handbook brings together contributions by the world's leading specialists that reflect the broad spectrum of modern palaeoanthropology thus presenting an indispensable resource for professionals and students alike Vol 1 reviews principles methods and approaches recounting recent advances and state of the art knowledge in phylogenetic analysis palaeoecology and evolutionary theory and philosophy Vol 2 examines primate origins evolution behaviour and adaptive variety emphasizing integration of fossil data with contemporary knowledge of the behaviour and ecology of living primates in natural environments Vol 3 deals with fossil and molecular evidence for the evolution of Homo sapiens and its fossil relatives **Evidence and Evolution** Elliott Sober,2008-03-27 How should the concept of evidence be understood And how does the concept of evidence apply to the controversy about creationism as well as to work in evolutionary biology about natural selection and common ancestry In this rich and wide ranging book Elliott Sober investigates general questions about probability and evidence and shows how the answers he develops to those questions apply to the specifics of evolutionary biology Drawing on a set of fascinating examples he analyzes whether claims about intelligent design are untestable whether they are discredited by the fact that many adaptations are imperfect how evidence bears on whether present species trace back to common ancestors how hypotheses about natural selection can be tested and many other issues His book will interest all readers who want to understand philosophical questions about evidence and evolution as they arise both in Darwin's work and in contemporary biological research **A Darwinian Worldview** Brian Baxter,2016-03-23 Darwin's theory of evolution by natural selection is considered in its application to human beings in this book Brian Baxter examines the various sociobiological approaches to the explanation of human behaviour which view the human brain and so the human mind as the product of evolution and considers the main arguments for and against this claim In so doing he defends the approaches against some common criticisms such as the charge that they are reductionist and

dehumanising The implications of these arguments for the social sciences and humanities are assessed as is the naturalistic view of ethics to which they lead A key issue examined in the book is the connection between this Darwinist perspective on human beings and modern environmental ethics which also often assume that human beings are part of an evolved living world The implications of these positions for the meaningfulness of human life are also examined Throughout the discussion the positions in sociobiology and environmental ethics developed by Edward O Wilson are taken as an exemplar of the characteristic features of a Darwinian worldview and the arguments of Wilson and his chief critics are thoroughly examined
