others as mystical figures akin to magicians They have been seen both as independent travelling entrepreneurs and as the dependents of elite patrons Hitherto these competing models have not been tested through a comprehensive assessment of the archaeological evidence for metalworking This volume fills that gap with analysis focused on metalworking tools and waste such as crucibles moulds casting debris and smithing implements The find contexts of these objects are examined both to identify places where metalworking occurred and to investigate the cultural practices behind the deposition of metalworking debris The key questions are what was the social context of this craft and what was its ideological significance How did this vary regionally and change over time As well as elucidating a key aspect of later prehistoric life in Britain and Ireland this important examination by leading scholars contributes to broader debates on material culture and the social role of craft
