## **Novae And Related Stars:**

Novae and Related Stars Yozo Yokota, 2012-12-06 Michael Friedjung Though known since antiquity novae are still poorly understood and present many problems There has tended to be a lack of communication between theoreticians and observers and between different schools of thought in spite of the advances of recent years in certain directions observations of ordinary novae at minimum and of dwarf novae theory of the causes of the explosion etc The meeting whose proceedings are contained in this volume was organized to stimulate a confrontation between the different ideas and results The subject has changed a lot since 1963 when the previous international meeting was held There were 61 participants at the conference from 17 countries so very many groups doing research in the field of novae were represented The reader will see that the subject has become more physical we know for instance that the binary nature of novae is essential but much work remains to be done There is still a large gulf between theory and observation May he find here many new ideas for future research I would like to thank the French Centre National de la Recherche Scientifique for providing financial help I must also thank the other members of the scientific committee Profs and Drs Bath Mustel Payne Gaposchkin Sparks and Warner and of the local committee Audouze Mrs Steinberg Vauclair

The Astrophysics of Emission-Line Stars Tomokazu Kogure, Kam-Ching Leung, 2010-05-05 Many types of stars show conspicuous emission lines in their optical spectra These stars are broadly referred to as emission line stars Emission line stars are attractive to many people because of their spectacular phenomena and their amazing varieties and variability This book offers general information on emission line stars starting from a brief introduction to stellar astrophysics and then moving to a broad overview of emission line stars including early and late type stars as well as pre main sequence stars Detailed references and index are prepared for further reading Tomokazu Kogure's email address tkogure pa2 so net ne jp

*Non-stable Stars* International Astronomical Union, 1957 Non-Stable Stars George H. Herbig, 2015-12-03 Originally published in 1957 this book contains papers from the Ninth General Assembly of the International Astronomical Union Offering a reassessment of non stable stars and recognising relocating and redefining the issues surrounding stellar instability this book will be a valuable reference work to anyone interested in the history of physics astronomy and cosmology

**The Pillars of Creation** Martin Beech, 2016-12-28 This book explores the mechanics of star formation the process by which matter pulls together and creates new structures Written for science enthusiasts the author presents an accessible explanation of how stars are born from the interstellar medium and giant molecular clouds Stars produce the chemicals that lead to life and it is they that have enabled the conditions for planets to form and life to emerge Although the Big Bang provided the spark of initiation the primordial universe that it sired was born hopelessly sterile It is only through the continued recycling of the interstellar medium star formation and stellar evolution that the universe has been animated beyond a chaotic mess of elementary atomic particles radiation dark matter dark energy and expanding spacetime Using the Milky Way and the Eagle Nebula in particular as case studies Beech follows every step of this amazing

process     *Cataclysmic Variables and Related Objects: pp.i-xc, 1-342* Margherita Hack, Constanze La Dous, 1993     **Second Catalogue of X-ray Sources** Pavel Rafaelovich Amnuel, 2012-12-06     Observing Variable Stars Gerry A. Good, 2012-12-06

Observing variable stars is one of the major contributions amateur astronomers make to science. There are 36 000 variable stars listed in the General Catalogue of Variable Stars so it is clearly impossible for the limited number of professional observatories to target even the majority of them. That's where amateur astronomers come in, thousands of them turning their telescopes to the sky every night. Variable star observing is the most popular of real science activities for amateurs and Gerry Good's book provides everything needed. The first part of the book provides a highly detailed account of the various classes of variable star with examples, illustrations and physical descriptions. The second section covers practical aspects of observing everything from preparation and planning through observing techniques to data management and reduction.

*Stellar Spectral Classification* Richard O. Gray, Christopher J. Corbally, 2021-06-08. Written by leading experts in the field, *Stellar Spectral Classification* is the only book to comprehensively discuss both the foundations and most up-to-date techniques of MK and other spectral classification systems. Definitive and encyclopedic, the book introduces the astrophysics of spectroscopy, reviews the entire field of stellar astronomy and shows how the well-tested methods of spectral classification are a powerful discovery tool for graduate students and researchers working in astronomy and astrophysics. The book begins with a historical survey followed by chapters discussing the entire range of stellar phenomena from brown dwarfs to supernovae. The authors account for advances in the field including the addition of the L and T dwarf classes, the revision of the carbon star Wolf-Rayet and white dwarf classification schemes and the application of neural nets to spectral classification. Copious figures illustrate the morphology of stellar spectra and the book incorporates recent discoveries from earth-based and satellite data. Many examples of spectra are given in the red, ultraviolet and infrared regions as well as in the traditional blue-violet optical region, all of which are useful for researchers identifying stellar and galactic spectra. This essential reference includes a glossary, handy appendixes and tables, an index and a Web-based resource of spectra. In addition to the authors, the contributors are Adam J. Burgasser, Margaret M. Hanson, J. Davy Kirkpatrick and Nolan R. Walborn.

**Advancing Variable Star Astronomy** Thomas R. Williams, Michael Saladyga, 2011-05-26. Founded in 1911, the AAVSO boasts over 1200 members and observers and is the world's largest non-profit organization dedicated to variable star observation. This timely book marks the AAVSO's centennial year, presenting an authoritative and accurate history of this important association. Writing in an engaging and accessible style, the authors move chronologically through five eras of the AAVSO, discussing the evolution of its structure and purpose. Throughout the text, the main focus is on the thousands of individuals whose contributions have made the AAVSO's progress possible. Describing a century of interaction between amateur and professional astronomers, the authors celebrate the collaborative relationships that have existed over the years. As the definitive history of the first hundred years of the AAVSO, this text has broad appeal and will be of interest to amateur and
