Ferry, Andrew Ranicki, Jonathan M. Rosenberg, 1995-11-23 The Novikov Conjecture is the single most important unsolved problem in the topology of high dimensional non simply connected manifolds These two volumes are the outgrowth of a conference held at the

Mathematisches Forschungsinstitut Oberwolfach Germany in September 1993 on the subject of Novikov Conjectures Index Theorems and Rigidity They are intended to give a snapshot of the status of work on the Novikov Conjecture and related topics from many points of view geometric topology homotopy theory algebra geometry analysis **The Novikov Conjecture** Matthias Kreck,Wolfgang Lück,2005-12-05 These lecture notes contain a guided tour to the Novikov Conjecture and related conjectures due to Baum Connes Borel and Farrell Jones They begin with basics about higher signatures Whitehead torsion and the s Cobordism Theorem Then an introduction to surgery theory and a version of the assembly map is presented Using the solution of the Novikov conjecture for special groups some applications to the classification of low dimensional manifolds are given **Variations on a Theme of Borel** Shmuel Weinberger,2022-12-08 Explains using examples the central role of the fundamental group in the geometry global analysis and topology of manifolds Handbook of K-Theory Eric Friedlander,Daniel R. Grayson,2005-07-18 This handbook offers a compilation of techniques and results in K theory Each chapter is dedicated to a specific topic and is written by a leading expert Many chapters present historical background some present previously unpublished results whereas some present the first expository account of a topic many discuss future directions as well as open problems It offers an exposition of our current state of knowledge as well as an implicit blueprint for future research **European Congress of Mathematics** Carles Casacuberta,Rosa M. Miro-Roig,Joan Verdera,Sebastia Xambo-Descamps,2012-12-06 This is the second volume of the proceedings of the third European Congress of Mathematics Volume I presents the speeches delivered at the Congress the list of lectures and short summaries of the achievements of the prize winners as well as papers by plenary and parallel speakers The second volume collects articles by prize winners and speakers of the mini symposia This two volume set thus gives an overview of the state of the art in many fields of mathematics and is therefore of interest to every professional mathematician **Ends of Complexes** Bruce Hughes,Andrew Ranicki,1996-08-28 A systematic exposition of the theory and practice of ends of manifolds and CW complexes not previously available **The Ubiquitous Heat Kernel** Jay Jorgenson,2006 The aim of this volume is to bring together research ideas from various fields of mathematics which utilize the heat kernel or heat kernel techniques in their research The intention of this collection of papers is to broaden productive communication across mathematical sub disciplines and to provide a vehicle which would allow experts in one field to initiate research with individuals in another field as well as to give non experts a resource which can facilitate expanding their research and connecting with others

K-Theory for Group C-Algebras and Semigroup C*-Algebras* Joachim Cuntz,Siegfried Echterhoff,Xin Li,Guoliang Yu,2017-10-24 This book gives an account of the necessary background for group algebras and crossed products for actions of a group or a semigroup on a space and reports on some very recently developed techniques with applications to particular examples Much of the material is available here for the first time in book form The topics discussed are among the most classical and intensely studied C algebras They are important for applications in fields as diverse as the theory of unitary

group representations index theory the topology of manifolds or ergodic theory of group actions Part of the most basic structural information for such a C^* algebra is contained in its K theory The determination of the K groups of C^* algebras constructed from group or semigroup actions is a particularly challenging problem Paul Baum and Alain Connes proposed a formula for the K theory of the reduced crossed product for a group action that would permit in principle its computation By work of many hands the formula has by now been verified for very large classes of groups and this work has led to the development of a host of new techniques An important ingredient is Kasparov's bivariant K theory More recently also the C^* algebras generated by the regular representation of a semigroup as well as the crossed products for actions of semigroups by endomorphisms have been studied in more detail Intriguing examples of actions of such semigroups come from ergodic theory as well as from algebraic number theory The computation of the K theory of the corresponding crossed products needs new techniques In cases of interest the K theory of the algebras reflects ergodic theoretic or number theoretic properties of the action

K-Theory for Operator Algebras Bruce Blackadar, 1998-09-13 This book is the only comprehensive treatment of K theory for operator algebras

The Local Structure of Algebraic K-Theory Bjørn Ian Dundas, Thomas G. Goodwillie, Randy McCarthy, 2012-09-06 Algebraic K theory encodes important invariants for several mathematical disciplines spanning from geometric topology and functional analysis to number theory and algebraic geometry As is commonly encountered this powerful mathematical object is very hard to calculate Apart from Quillen's calculations of finite fields and Suslin's calculation of algebraically closed fields few complete calculations were available before the discovery of homological invariants offered by motivic cohomology and topological cyclic homology This book covers the connection between algebraic K theory and Bökstedt Hsiang and Madsen's topological cyclic homology and proves that the difference between the theories are locally constant The usefulness of this theorem stems from being more accessible for calculations than K theory and hence a single calculation of K theory can be used with homological calculations to obtain a host of nearby calculations in K theory For instance Quillen's calculation of the K theory of finite fields gives rise to Hesselholt and Madsen's calculations for local fields and Voevodsky's calculations for the integers give insight into the

diffeomorphisms of manifolds In addition to the proof of the full integral version of the local correspondence between K theory and topological cyclic homology the book provides an introduction to the necessary background in algebraic K theory and highly structured homotopy theory collecting all necessary tools into one common framework It relies on simplicial techniques and contains an appendix summarizing the methods widely used in the field The book is intended for graduate students and scientists interested in algebraic K theory and presupposes a basic knowledge of algebraic topology
