Nuclear Energy A Sensible Alternative:

Nuclear Energy Karl O. Ott, 2012-12-06 E L Zebroski During the 1970s there was rapid growth of a philosophy that assumes that deindustrialization will result in an Elysian postindustrial society This view is generally antitechnology commonly in opposition to large scale energy sources and often supportive of high cost speculative or at most small scale energy sources The social and economic costs of policies which would lead to deindustrialization are ignored or considered to be irrelevant The development of civilian nuclear energy as a by product of wartime developments also brings with it an association with the fear of nuclear weapons and with the repugnance for war in general Many of these views and associations mingle to provide significant political constituencies These have had considerable impact on party platforms and elections Also another important aspect is the conservation viewpoint This view correctly concerns the fact that in definite increase in per capita energy consumption coupled with increasing U S and world populations must at some point be restrained by limits on resources as well as by limits arising from environmental effects All of these concerns have been subject to voluminous analysis publications and public discussion They underlie one of the dominant social movements of the 1970s and 1980s Indefinite exponential growth of energy production is neither possible nor desirable **Energy Abstracts for Policy Analysis**, 1986 *Nuclear Energy ebook Collection* Gianni Petrangeli, Raymond L.
