Nuclear Fission And Cluster Radioactivity:

Theory of Particle and Cluster Emission Doru S. Delion, 2010-11-10 Nowadays experimental nuclear physics pushes its limits towards highly unstable nuclei The theoretical description of proton rich and neutronrich nuclei or superheavy elements has become an important part of the modern nuclear physics The main tool to investigate such unstable nuclei concerns radioactive decays from proton emission to fission processes We review the main theoretical methods describing decay processes induced by the strong interaction like Coupled channels method for Gamow resonances R matrix theory Distorted wave approach Semiclassical approach Multi step and Two center shell model Thus most of the book is addressed to a broad audience within the nuclear physics community Secondly this book is an attempt to clarify some fundamental aspects connected with the fine structure or anisotropy in alpha decay and ternary cold fission Finally the self consistent microscopic theory of the alpha decay is analyzed

Clustering Phenomena in Atoms and Nuclei Marten Brenner, Tom Lönnroth, F. Bary Malik, 1992-05-25 In these days of specialization it is important to bring together physicists working in diverse areas to exchange and share their ideas and excitement This leads to cross fertilization of ideas and it enriches as in biological systems a specialized field with new strength development and direction derived from another area Although this might be an uncommon thing it is an important step in our understanding of the physical world around us which is after all the main purpose of physics The seed for this conference was really sowed when one of us MB and Mr Manngrd showed some scattering data at backward angles to FBM one summer about four years ago That occasion led to a long research collaboration between the Abo Akademi physicists and other scientists in several countries The actual idea to explore the possibility of holding a conference however crystallized in the summer of 1989 during a visit of FBM to Abo Akademi The final decision to organize a conference was made after MB visited Professor Ben Mottelson in Copenhagen and Professor Anagnostatos in Athens At this point it was recognized that there are similarities as well as differences between clustering phenomena in nuclei and systems consisting of atoms It was therefore conjectured that it could be very stimulating to bring together these groups to exchange their ideas and to learn from each other's fields A conference along these lines we hoped would contribute to an increased mutual understanding

Latest Advances in Atomic Cluster Collisions J. P. Connerade, Andrey V. Solov'yov, 2008 This book presents a snapshot of the most recent and significant advances in the field of cluster physics It is a comprehensive review based on contributions by the participants of the 2nd International Symposium on Atomic Cluster Collisions ISACC 2007 held in July 19-23 2007 at GSI Darmstadt Germany The purpose of the Symposium is to promote the growth and exchange of scientific information on the structure and properties of nuclear atomic molecular biological and complex cluster systems studied by means of photonic electronic heavy particle and atomic collisions Particular attention is devoted to dynamic phenomena many body effects taking place in cluster systems of a different nature these include problems of fusion and fission fragmentation

collective electron excitations phase transitions etc Both the experimental and theoretical aspects of cluster physics uniquely placed between nuclear physics on the one hand and atomic molecular and solid state physics on the other are discussed

Lovas, 1998 *Nuclear Radiation* Harold Spencer Jones, 2013-10-02 Annals of the International Geophysical Year Part I Nuclear Radiation Techniques for Radioactivity Measurements covers the techniques for radioactivity measurement observations of aurora and airglow and instructions for the longitude and altitude program This book is organized into three parts encompassing 11 chapters The first part presents the techniques for radioactivity measurements The second part describes the geographical distribution visual observations and photographic and photometric evaluations of aurora and airglow The third part provides instructions for operation of the moon position camera including camera settings and operation field plotting and star marking This part also presents additional instructions for PZT use in the longitude and latitude program This book will prove useful to geophysicists and researchers in the allied fields

Radionuclides in the Food Chain John H. Harley, Gail D. Schmidt, Giovanni Silini, 2012-12-06 The Symposium on Radionuclides in the Food Chain sponsored by the International Life Sciences Institute in association with the International Institute for Applied Systems Analysis was intended to bring together policymakers and other representatives of the food industry with radiation experts involved in measuring and assessing radioactivity in foodstuffs The symposium was made timely by the problems arising from the nuclear reactor accident at Chernobyl in the USSR which brought out the lack of international agreement on guidance for responding to such radionuclide contamination of food and foodstuffs The presentations by the radiation experts covered the sources of radionuclides natural radioactivity fallout from nuclear weapons tests routine releases from nuclear facilities and various nuclear accidents The speakers represented a broad distribution in both scientific disciplines and international geographic origin They summarized the available data on measurements and indicated the current procedures for assessing radiation exposure It was hoped that the food industry representatives would bring out the problems posed to industry and governments by the presence of radioactivity in food

Radiochemistry or nuclear chemistry is the study of radiation from an atomic and molecular perspective including elemental transformation and reaction effects as well as physical health and medical properties This revised edition of one of the earliest and best known books on the subject has been updated to bring into teaching the latest developments in research and the current hot topics in the field To further enhance the functionality of this text the authors have added numerous teaching aids examples in MathCAD with variable quantities and options hotlinks to relevant text sections from the book and online self grading tests New edition of a well known respected text in the specialized field of nuclear radiochemistry Includes an interactive website with testing and evaluation modules based on exercises in the book Suitable for both radiochemistry and nuclear chemistry courses

Radioactivity Radionuclides Radiation Joseph Magill, Jean Galy, 2005-10-14 Offers basic data on more than 3 600 radionuclides Emphasizes practical application such as basic research archaeology and dating medical radiology and industrial Balanced and informative details on the biological effects of radiation and resultant controversy Trimmed down student version of a product that costs many times the price *Radioactive Fallout after Nuclear Explosions and Accidents* Y.A. Izrael, 2002-06-20 To achieve successful solutions to the problems resulting from local distant and global radioactive fallout after nuclear explosions and accidents and to achieve successful retrospective analyses of the radiation conditions from recent observations certain information is needed the distribution of the exposure dose rate in the atmosphere and in a country the distribution of radionuclides in natural environments and the nuclide composition of the radioactive fallout the features of formation of the aerosol particle carriers of the radioactivity and of the nuclide distribution of the particles of different sizes formed under different conditions the processes involved in the migration of radioactive products in different zones and environments the external and internal effects of nuclear radiation on human beings This monograph is devoted to a number of these problems namely to studies of the radioactive fallout composition the formation of the aerosol particles that transport the radioactive products and to the analysis of the external radiation doses resulting from nuclear explosions and or accidents Problems of restoration and rehabilitation of contaminated land areas are also touched upon in the monograph To solve such problems one requires knowledge of the mobility of radionuclides an understanding of their uptake by plants their transportation within the food chain and finally their uptake by animal and or human organisms The results of many years of study of radioactive fallout from atmospheric and underground nuclear explosions and accidents are summarized in this book It is intended for various specialists geophysicists ecologists health experts and inspectors as well as those who are concerned with radioactive contamination of natural environments

Radioactivity and Fallout Research U.S. Atomic Energy Commission. Division of Biology and Medicine, 1962 **Atomic and Nuclear Clusters** G.S. Anagnostatos, W.v. Oertzen, 2011-12-23 The Second International Conference on Atomic and Nuclear Clusters 93 was organized in a joint effort by the Demokritos National Center for Scientific Research G S Anagnostatos representing the atomic physics and the Hahn Meitner Institut W von Oertzen representing the nuclear physics The subject of clusters small aggregates of particles is a topic of primary interest in both atomic and nuclear physics and also in other fields like in the case of quark structure of baryons and in cosmology The interplay between atomic and nuclear physics is a particularly fascinating one because many concepts are common to both fields quantal effects shells geometric structures collective modes fission etc This conference was the second after the first one organized by Professor M Brenner in Abo Finland in 1991 The general atmosphere of a joint forum for atomic and nuclear physicists was very fruitful and thus the decision to have a sequence of such meetings has been taken A third one is planned in St Petersburg Russia with Professor K Gridnev St Petersburg and Mme Professor C Bnkhignac Orsay as Chairpersons The conference site Fin on Santorini island Greece was a wonderful choice for a conference It is small which helps to keep people concentrated in a smaller community it has a perfect convention center the P Nomikos Conference Center and a very beautiful landscape formed by a large volcanic crater
