as a project organized by members of the Science and Technology Studies section of the American Political Science
Association It is part of an ongoing attempt by members of the section and others to focus scholarly attention on the political
and social implications of technological change and scientific advances Part of the concern is to identify theories conceptual
frameworks and concepts from political science that can usefully be applied to the study of science and technology Part of
the concern is to explore how science and technologyrelated concerns help illuminate and test some of the enduring theories
of political science We hope to contribute to the development of a strong theoretical underpinning for science and technology
studies We hope that such an enrichment of the theoretical bases for understanding science and technology related
phenomena will also contribute to more effective and appropriate public policies for regulating and encouraging scientific
and technological developments This book is an attempt to marry theoretical exposition and applied policy inquiry A

and what can be done to head it off Most people don t realize that skyrocketing global energy demand and economic growth
severely affect the supply of electricity Between production power plants and delivery is an antiquated third world
transmission grid that is in desperate need of hardening against breakdowns terrorist attacks inadequate carrying capacity
and operational obsolescence And while electricity doesn t hold the headlines or dramatic power of oil the ability to ensure
its uninterrupted supply at a reasonable price is even more essential to global survival and prosperity Lights Out is today s
most detailed in depth examination of this largely unreported looming energy crisis Written by one of the world s top
electricity industry experts this powerful book covers numerous hot button economic and political issues free markets versus
regulation energy independence versus foreign imports nuclear power global warming and other environmental issues and
much more Beyond just uncovering and illuminating the problems however it proposes a comprehensive road map of
technical solutions and regulatory reform from both the production and demand sides of the equation a framework for
rethinking rebuilding and enhancing the entire electricity production and delivery infrastructure Prescriptive and provocative
Lights Out will redefine the simmering debate on how the world can and must act now to head off a global catastrophe one
that could eventually wreak even more havoc than the ongoing oil crisis Jason Makansi is the President of Pearl Street Inc a
