## **Nuclear Safety Risks And Regulation:**

**Nuclear Safety** William C. Wood, 1983-01-01      Nuclear Politics in America Robert J. Duffy, 1997 Duffy's work traces nuclear politics from the creation of a powerful subgovernment through the public lobby reforms of the late 1960s and early 1970s and the deregulatory backlash of the Reagan years. He demonstrates that while policies did change in the 1970s they did not change as much as other accounts have suggested and that the industry continued to receive considerable federal support. The book is particularly significant for extending the discussion of nuclear policy through the Bush and Clinton years including the controversy over waste disposal, new licensing procedures enacted in the 1992 Amendments to the Atomic Energy Act and the effects of deregulation of electric utilities. Committee on Science. Subcommittee on Energy and Environment, 1998      Risk, Reliability and Safety: Innovating Theory and Practice Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25 Risk Reliability and Safety contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow, Scotland, 25-29 September 2016. Authors include scientists, academics, practitioners, regulators and other key individuals with expertise and experience relevant to specific areas. Papers include domain specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges and exposition of concepts, methods and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability, modelling, maintenance optimisation, uncertainty analysis, resilience, assessment, risk and crisis management      **Energy and Water Development Appropriations for 1993: Federal Energy Regulatory Commission** United States. Congress. House. Committee on Appropriations. Subcommittee on Energy and Water Development, 1992      **Nuclear Energy Regulation, Risk and The Environment** Abdullah Al Faruque, 2018-09-21 Analyzing the impact and benefits of nuclear energy on environment, this book examines nuclear treaties in relation to environmental protection, highlights legal framework on non-proliferation and denuclearization, explores treaties on nuclear safety and nuclear security, discusses legal regimes on management of nuclear wastes, assesses the third party liability regime and discusses the role of IAEA, EURATOM and NEA in regulating nuclear energy. It explores nuclear energy in the context of climate change and sustainable development. This book also examines the international legal framework on notification assistance and emergency preparedness in the event of nuclear accidents, considers legal aspects of decommissioning of nuclear power plants and main legislative trends on nuclear energy use in selected countries. It also addresses regulatory responses to nuclear energy in the wake of the Fukushima power plant nuclear accident in Japan      External Regulation of DOE Facilities United States. Congress. House. United States. Congress,1994      **Energy Research Abstracts** ,1995      *De Minimis Risk* Chris Whipple,2012-12-06 On May 29 and 30 1985 a workshop was held to explore the legal ethical social scientific and practical aspects of the use of the de minimis risk concept for health and safety regulation The workshop was sponsored by the Society for Risk Analysis and its National Capital Area Chapter the Environmental Protection Agency the Nuclear Regulatory Commission and the Electric Power Research Institute The two day meeting was held in Washington D C at the Brookings Institution however the Brookings Institution was not a sponsor of the meeting and did not play a role in its program De minimis risk policy considerations were addressed from a theoretical and philosophical viewpoint from a quantitative and methodological basis and through insights gained with regulatory applications The distinctions between these three approaches to the subject are not sharp most papers in these proceedings address aspects of all three topics The reader familiar with the literature on the use of risk assessment in regulatory policy and decision making will find significant new contributions to the field One of these is the examination of regulatory actions in particular actions by the EPA in response to risks of varying magnitude Many attempts to seek patterns in regulatory policies have been based on analysis of the implicit economic value in obtaining risk reductions These analyses have typically found great variability in the marginal cost effectiveness of regulatory actions

*NRC Regulations of TVA* United States. Congress. House. Committee on Energy and Commerce. Subcommittee on Oversight and Investigations,1987      Risk regulation, liability and insurance Eric Marsden,2014-09-01 This document provides a short literature review on the complementarity and antagonisms between liability rules safety regulation and insurance and their effect on safety management It draws on a range of disciplines with a focus on economic analysis of law and regulation theory Some of the issues discussed are rather complex this document attempts to provide simple explanations together with references to the professional literature for the interested reader Some issues are the subject of ongoing debate between scholars in such situations we have attempted to present the various points of view The document provides background information concerning the topics discussed during the NeTWork 2012 workshop and draws on some of the contributions of workshop participants and the rich discussion which took place during the three days The first chapter presents issues related to regulation starting with the classical economic justifications for state intervention presence of externalities information failures and moral hazard A number of obstacles to the effectiveness of safety regulation are presented Finally some alternatives or complements to regulation including self regulation are briefly discussed The second chapter presents an overview of liability law starting with some introductory definitions Factors which weaken the effectiveness of liability as an incentive to invest in prevention are discussed as are negative effects of liability regimes on safety management A number of case studies illustrating the liability of regulators are briefly presented Chapter 3 discusses the impact of insurance and reinsurance on firms and individuals safety management The last chapter briefly analyzes firms and individuals sources of motivation to take care      Federal Register ,2004-12      *Japan's Nuclear Disaster and the Politics*

*of Safety Governance* Florentine Koppenborg, 2023-06-15 In Japan's Nuclear Disaster and the Politics of Safety Governance Florentine Koppenborg argues that the regulatory reforms taken up in the wake of the Fukushima disaster on March 11 2011 directly and indirectly raised the costs of nuclear power in Japan The Nuclear Regulation Authority resisted capture by the nuclear industry and fundamentally altered the environment for nuclear policy implementation Independent safety regulation changed state business relations in the nuclear power domain from regulatory capture to top down safety regulation which raised technical safety costs for electric utilities Furthermore the safety agency's extended emergency preparedness regulations expanded the allegorical backyard of NIMBY demonstrations Antinuclear protests mainly lawsuits challenging restarts incurred additional social acceptance costs Increasing costs undermined pronuclear actors' ability to implement nuclear power policy and caused a rift inside the nuclear village Small nuclear safety administration reforms were in fact game changers for nuclear power politics in Japan Koppenborg's findings contribute to the vibrant conversations about the rise of independent regulatory agencies crisis as a mechanism for change and the role of nuclear power amid global interest in decarbonizing our energy supply

**The Reality of Precaution** Jonathan B. Wiener, Michael D. Rogers, James K. Hammitt, Peter H. Sand, 2013-05-13 The Precautionary Principle has sparked the central controversy over European and U.S. risk regulation The Reality of Precaution is the most comprehensive study to go beyond precaution as an abstract principle and test its reality in practice This groundbreaking resource combines detailed case studies of a wide array of risks to health safety environment and security a broad quantitative analysis and cross-cutting chapters on politics law and perceptions The authors rebut the rhetoric of conflicting European and American approaches to risk and show that the reality has been the selective application of precaution to particular risks on both sides of the Atlantic as well as a constructive exchange of policy ideas toward better regulation The book offers a new view of precaution regulatory reform comparative analysis and transatlantic relations

**Uncertainty in Risk Assessment, Risk Management, and Decision Making** V.T. Covello, Lester B. Lave, Alan Moghissi, V.R.R. Uppuluri, 2013-03-08 The subject of this volume uncertainties in risk assessment and management reflects an important theme in health safety and environmental decision making Most technological hazards are characterized by substantial uncertainty Recent examples include nuclear waste disposal acid rain asbestos in schools carcinogens in food and hazardous waste dealing with such uncertainty is arguably the most difficult and challenging task facing risk assessors and managers today Four primary sources of uncertainty in risk assessment and management can be identified 1 uncertainties about definitions 2 uncertainties about scientific facts 3 uncertainties about risk perceptions and attitudes and 4 uncertainties about values Uncertainties about definitions derive primarily from disagreements about the meaning and interpretation of key concepts such as probability Uncertainties about scientific facts derive primarily from disagreements about failure modes the probability and magnitude of adverse health or environmental consequences cause and effect relationships dose response relationships and exposure patterns Uncertainties about risk perceptions and attitudes

derive primarily from disagreements about what constitutes a significant or acceptable level of risk Uncertainties about values derive primarily from disagreements about the desirability or worth of alternative risk management actions or consequences The papers in this volume address each of these sources of uncertainty from a variety of perspectives Reflecting the broad scope of risk assessment and risk management research the papers include contributions from safety engineers epidemiologists toxicologists chemists biostatisticians biologists decision analysts economists psychologists political scientists sociologists ethicists and lawyers
