Ignoring the Apocalypse David Howard Davis, 2007-06-30 Environmentalists often predict an Apocalypse is coming The earth will heat up like a greenhouse We will run out of energy Overpopulation will lead to starvation and war Nuclear winter will kill all plants and animals During the past fifty to one hundred years Americans have heard many prophecies of doom such as the Club of Rome report predicting the world economy would crash about the year 2020 These do not come as complete surprises without any warnings Sometimes the United States simply ignores the threats but other times it makes plans to prevent them This provocative book asks whether American planning is different for dangers that are truly apocalyptic ones that could end life on the planet or at least modern economic prosperity This provocative book begins by asking whether American planning is different for dangers that are truly apocalyptic ones that could end life on the planet or at least modern economic prosperity It goes on to ask why Americans ignore so many problems like the greenhouse effect or an oil shortage or nuclear war problems that have been forecast many times Then when the United States does plan why do those plans often go astray Energy Abstracts for Policy Analysis , 1988 **Justice Without Frontiers** C.G.

Weeramantry, 2023-12-11 This work an important bridge between the worlds of science and law is one of a series but may be purchased separately It is one of the most detailed studies thus far on the interrelationship of science and technology with the growing discipline of human rights Apart from general perspectives it also deals specifically with the obligations of doctors engineers nuclear scientists computer technologists genetic engineers genetic counsellors mining technologists and others No library of science medicine engineering or technology of any description should be without it for it provides an irreducible minimum of human rights knowledge without which these disciplines cannot function in the next century with due regard to their social and human rights implications Not all scientists will agree with all the author s views but he poses them challengingly and brings into the open a number of major issues which can no longer be ignored The volume is a plea for an interdisciplinary and broad based approach to scientific problems scientific education and continuing education of scientists It places the scientific endeavour in its overall social and human rights context in a manner which neither students of science nor established scientists can ignore With an approach which is both imaginative and practical it explores the future of scientific endeavour in a humanistic perspective State , 1982 **The Plain Truth** , 1983 **Civil defense review** United States.
