rectilinear scanner produced images and is becoming ever more interesting and demanding with the growth of positron emission tomography and other molecular imaging. Taking and passing the exam offered by the Nuclear Medicine Technology Certification Board NMTCB or that offered by the American Registry of Radiologic Technologists ARRT is the final step in reaching the status of Nuclear Medicine Technologist. These exams are both challenging and the breadth of knowledge that they cover mean that a thorough review is in order before attempting either exam. This book was created to assist in preparation for those exams. In addition to recalling information the questions require application of information and analysis of situations. This edition provides detailed explanations for answers to the questions in each chapter and offers a new chapter on Positron Emission Tomography. Since 2004 the NMTCB has offered a specialty exam in this modality allowing technologists to continue their education and augment their career qualifications. Both the ARRT and the NMTCB use computer testing for these exams. Because of this questions cannot be skipped. A good strategy is to try to get through all of the questions and marking or flagging each one that was a guess.
