Nuclear Reactions Science And Transscience Masters Of Modern Physics:

Nuclear Reactions Alvin M. Weinberg, 1992-11-18 Blurb Contents Marvelous reading with few problems of the interaction between science technology and society left untouched One need not always agree but one cannot come away without a better education I found the parts on scientific administration and on the interaction of science and society excellent and provocative reading and the parts on energy and nuclear energy very much to the point American Journal of Physics Alvin Weinberg explores through these collected essays the ever troublesome relationship between science technology and society The title is taken from Weinberg s assertion that most of the issues arising at the intersection of science and society depend upon answers to questions that lie outside the power of science issues that are trans scientific Weinberg who during World War II helped develop the first nuclear reactors has much to say on the current role of nuclear power and the possibilities for the future Other topics include strategic defenses and arms control the role of the science administrator and the way in which time energy and resources are allocated to public problems In this remarkable record of a half century of public oriented work Weinberg lays the foundation for a philosophy of scientific administration parallel to the more established philosophy of science

essays represent Joseph Silk's own meandering around cosmic themes. The topics span the beginning of time until its end and encompass the enigma of the evolution of large scale structure culminating in the formation of the galaxies. Dr Silk has taken these writings from pieces written over the years many commissioned to highlight a new look at a new discovery in cosmology. Some have been rewritten to capture a modern perspective while others remain as written to encapsulate his thoughts of a decade ago.

This Gifted Age John C. Gibbons, 1997-10-01 This welcome collection provides a glimpse of the power of a scientific training combined with a humane outlook in approaching major issues of public policy. Few people have spoken more wisely to the larger issues of science and technology in our national life. Frank T. Rhodes, President Emeritus, Cornell University.

Atomic Histories Rudolf Ernst Peierls, 1997 His experience and insight combined with a great honesty and clarity of vision placed him among the most authoritative commentators in his field. Brian Cathcart, Deputy Editor, The Independent and author of *Test of Greatness: Britain's Struggle for the Atom Bomb*. Highly respected physicist Rudolf Peierls offers an enlightening collection of essays, book reviews, and candid profiles of some of the most famous scientists of the 20th century. Many of the essays are concerned with the nuclear arms race which Dr Peierls has consistently opposed. The book reviews are most revealing and reflect Peierls's position on the Strategic Defense Initiative and his views on energy policy. Peierls also writes about mentor Wolfgang Pauli, the controversial figure of Werner Heisenberg, J. Robert Oppenheimer as a troubled young man, and personal friends Herbert Skinner, Niels Bohr, Max Planck, and others.

About the Author: In 1940 Rudolph Peierls, together with Otto Frisch, put forth the theory that if U-235 could be separated from U-238, an 11 pound bomb could be produced with the equivalent power of several tons of dynamite. Educated in Germany, Dr Peierls went to Zurich in 1929 to assist the pioneering physicist Wolfgang Pauli. In 1932 he became a Rockefeller Fellow and went to England as a researcher. He remained in England after Hitler came to power, and following World War II he taught at the University of Birmingham and later at Oxford.
