## **Nuclear Safety:**

Nuclear Safety Gianni Petrangeli, 2006-05-30 Nuclear Safety provides the methods and data needed to evaluate and manage the safety of nuclear facilities and related processes using risk based safety analysis and provides readers with the techniques to assess the consequences of radioactive releases The book covers relevant international and regional safety criteria US IAEA EUR PUN URD INI The contents deal with each of the critical components of a nuclear plant and provide an analysis of the risks arising from a variety of sources including earthquakes tornadoes external impact and human factors It also deals with the safety of underground nuclear testing and the handling of radioactive waste Covers all plant components and potential sources of risk including human technical and natural factors Brings together information on nuclear safety for which the reader would previously have to consult many different and expensive sources Provides international design and safety criteria and an overview of regulatory regimes Nuclear Safety, 1980 *Nuclear Safety*, 1970-11 **Elements of nuclear safety** Jacques Libmann, 2012-12-04T00:00:00+01:00 Elements of nuclear safety Nuclear Power and Radiation in Perspective J. R. Buchanan, Nuclear Safety Information Center, 1974 **Nuclear Safety** Jyuji Misumi, Rainer Miller, Bernhard Wilpert, 1998-11-11 For many years as a direct result of international governmental concern the nuclear power industry has been at the forefront of industrial safety This text represents a cross disciplinary look at the human factors developments in this industry with wider applications for the entire industrial sector Technical psychological and social aspects Challenges in Radiation Protection and Nuclear Safety Regulation of the Nuclear Legacy Malgorzata Sneve, Mikhail F. Kiselev, 2008-07-19 A NATO workshop was held in September 2007 under the Security through Science framework to consider the current challenges in regulation of the nuclear legacy The overall objective was to share East West competence and experience in radiation protection and nuclear safety supervision of installations built during the cold war particularly in relation to regulatory strategies for safe decommissioning of unique or unusual nuclear facilities and remediation activities There were over 60 participants from 8 countries as well as representatives from the International Commission on Radiological Protection the International Atomic Energy Agency and NATO The organisations involved included regulatory authorities operators and technical support organizations The new Russian Federation Unified State Programme for Handling Spent Fuel and Radioactive Waste was introduced and the steps necessary to set this up as a comprehensive programme of activities were described Some waste management sites are in a poor state Legacy management experience was provided from the UK France and the USA Information was provided on methods for site characterisation and separation of wastes into exempt low level and intermediate level waste and the complication of dealing at the same time with chemical hazards such as beryllium Strategies for contaminated site management were also explained and the associated risk assessment methods outlined The Russian Federation has responsibility to manage its own nuclear legacy But it is also one of several countries in the global network of nuclear activities Harmonisation of approaches is

valuable in building future cooperation but local conditions may influence the best local solution Accordingly future exchanges such as those provided for by this workshop should be encouraged There are many complex issues to be addressed and they cannot all be solved at once Clear recognition of the major threats as well as weakness in regulatory processes can be useful in directing future resources However at this stage it is clear that there are specific regulatory issues to address as well as a need to maintain development of an enhanced overall safety culture Such guidance needs to be thoroughly based on the best use of scientific and technical information At the same time part of the solution relates to policy issues and value judgements and so broader interaction among regulators operators and other stakeholders is to be encouraged
