Nuclear Winter A New Dimension For The Nuclear Debate:

Nuclear Winter Christopher Meredith, Owen Greene, Mike Pentz, 1984 **Encyclopedia of American Foreign Policy**
Glenn P. Hastedt, 2014-05-14 Presents an A to Z reference guide that examines United States foreign policy **Britain, an Unfree Country** Terence DuQuesne, Edward Goodman, 1986 **Science and Mythology in the Making of Defence Policy** Margaret Blunden, Owen Greene, 1989 Nine contributions analyze defence decision making in theory and the effects of the state of technology and political priorities Annotation copyrighted by Book News Inc Portland OR **A Nuclear Winter's Tale** Lawrence Badash, 2009-07-10 The rise and fall of the concept of nuclear winter played out in research activity public relations and Reagan era politics The nuclear winter phenomenon burst upon the public s consciousness in 1983 Added to the horror of a nuclear war s immediate effects was the fear that the smoke from fires ignited by the explosions would block the sun creating an extended winter that might kill more people worldwide than the initial nuclear strikes In A Nuclear Winter s Tale Lawrence Badash maps the rise and fall of the science of nuclear winter examining research activity the popularization of the concept and the Reagan era politics that combined to influence policy and public opinion Badash traces the several sciences including studies of volcanic eruptions ozone depletion and dinosaur extinction that merged to allow computer modeling of nuclear winter and its development as a scientific specialty He places this in the political context of the Reagan years discussing congressional interest media attention the administration s plans for a research program and the Defense Department s claims that the arms buildup underway would prevent nuclear war and thus nuclear winter A Nuclear Winter s Tale tells an important story but also provides a useful illustration of the complex relationship between science and society It examines the behavior of scientists in the public arena and in the scientific community and raises questions about the problems faced by scientific Cassandras the implications when scientists go public with worst case scenarios and the timing of government reaction to startling scientific findings **RUSI and Brassey's Defence Yearbook** Royal United Services Institute for Defence Studies, 1986 **Peace News for Nonviolent Revolution** , 1984
Transactions of the American Nuclear Society , 1987 [New Dimensions in Foreign Policy \(Routledge Revivals\)](#) Max Beloff, 2009-07-15 Originally published in 1961 this is an extremely valuable contribution to the understanding of contemporary international institutions and the working of the British system of government It deals with the problems presented to British Government Departments by the emergence in the post war world of a number of new international organisations which are concerned with European recovery and integration and with the development of the Atlantic Community of Nations This book traces the British share in the creation of the Council of Europe OEC NATO and WEU and deals with the relations between Britain and the Coal and Steel Community the Common Market and Euratom Finally the book assesses the impact of these activities upon the government at home and the extent to which the public appreciates the change in Britain s international status that has resulted from these developments **The Future as Catastrophe** Eva

Horn,2018-09-18 Why do we have the constant feeling that disaster is looming Beyond the images of atomic apocalypse that have haunted us for decades we are dazzled now by an array of possible catastrophe scenarios climate change financial crises environmental disasters technological meltdowns perennial subjects of literature film popular culture and political debate Is this preoccupation with catastrophe questionable alarmism or complacent passivity Or are there certain truths that can be revealed only in apocalypse In *The Future as Catastrophe* Eva Horn offers a novel critique of the modern fascination with disaster which she treats as a symptom of our relationship to the future Analyzing the catastrophic imaginary from its cultural and historical roots in Romanticism and the figure of the Last Man through the narratives of climatic cataclysm and the Cold War s apocalyptic sublime to the contemporary popularity of disaster fiction and end of the world blockbusters Horn argues that apocalypse always haunts the modern idea of a future that can be anticipated and planned Considering works by Lord Byron J G Ballard and Cormac McCarthy and films such as *12 Monkeys* and *Minority Report* alongside scientific scenarios and political metaphors she analyzes catastrophic thought experiments and the question of survival the choices legitimized by imagined states of exception and the contradictions inherent in preventative measures taken in the name of technical safety or political security What makes today s obsession different from previous epochs is the sense of a catastrophe without event a stealthily creeping process of disintegration Ultimately Horn argues imagined catastrophes offer us intellectual tools that can render a future shadowed with apocalyptic possibilities affectively epistemologically and politically accessible

ignored for more than forty years until renewed interest and technological breakthroughs confirmed the existence of the Kuiper Belt. Peebles also chronicles the discovery of Shoemaker Levy 9, a comet with twenty-two nuclei that crashed into Jupiter in 1994, releasing many times the energy of the world's nuclear arsenal. Showing how asteroid research is increasingly collaborative, the book provides insights into the evolution of scientific ideas and the ebb and flow of scientific debate.

Making the Money Sing John Tirman, 2000-09-13 In the 1980s liberal philanthropists worked in tandem to end the nuclear arms race, a remarkably successful effort but scattered into several directions in the 1990s after the Cold War ended. This book chronicles those two decades with provocative stories and insights about how and why philanthropy reshapes international affairs.

World Encyclopedia of Peace, 1986 **Afkār Inquiry**, 1984-06 Magill's Survey of Science

Frank Northen Magill, Roger Smith, 1990 The Survey makes accessible the core knowledge of the sciences to curious readers with no special preparation. Within the 377 articles here, 141 cover the major subfields of physical geology; 26 treat areas of economic geology, from essential minerals and other earth resources to the variety of ways man harnesses geothermal, wind, ocean, solar, and nuclear power. Thirty articles examine a range of issues in geochemistry. Geophysics is given full coverage in 35 articles. The planet's history, as well as its impact on the development of life and various early life forms, is explored in 22 articles on fossils, ice ages, dinosaurs, mass extinctions, and evolution. Water is examined in all its forms and sources in 27 articles. There are 36 articles on the solar system, eight on major mountain ranges, soils are done in eight, the atmosphere in 18. Averaging seven pages, articles begin with ready reference matter and a list of principal terms. A summary section forms the major part of each article, providing a description of either the phenomenon or the methodology. Context, the concluding section of each essay, presents the conclusions, applications, and implications derived from investigation of the topic. Finally, an annotated selected bibliography directs the reader to sources that are accessible to the nonspecialist. Cross references list articles that offer additional information on the same or a related topic.
