Nuclei far from stability in nucleon-removal/fragmentation reactions

Fragmentation is an optimum reaction mechanism for exploring the nuclide chart:

- neutron-deficient nuclei are highly populated up to the drip-line
- the in-flight fragmentation of heavy nuclei leading to fission produces medium-mass neutron-rich nuclei
- the large fluctuation in isospin (abrasion) and excitation energy (ablation) give access to **cold fragmentation** processes where neutron-rich nuclei are produced.

Nuclei Far From Stability:

The Hispalensis Lectures on Nuclear Physics Jose Miguel Arias, Manuel Lozano, 2004-11-23 Powerful new techniques including heavy ion and exotic beams are pushing the frontiers of nuclear physics and opening up a wealth of new fields of research After introductory chapters on theoretical and experimental aspects of nuclear collisions and beams Exotic Nuclear Physics offers articles by experienced lecturers on forefront topics in nuclear physics such as the conquest of the neutron and the proton drip lines nuclear astrophysics the equation of state of hypernuclear matter nuclear supersymmetry and chaotic motion in nuclei This volume continues the successful tradition of published lecture notes from the Hispalensis International Summer School It will benefit graduate students and lecturers in search of advanced material for self study and courses as well as researchers in search of a modern and comprehensive source of reference

The Structure of Nuclei Far from Stability. [Dept. of Physics and Astronomy, Louisiana State Univ., Baton Rouge, Louisiana]., 1993 Studies on nuclei near Z 82 contributed to the establishment of a new region of nuclear deformation and a new class of nuclear structure at closed shells A important aspect of this work is the establishment of the connection between low lying 0 sup states in even endash even nuclei and the occurrence of shape coexistence in the odd mass neighbors E0 transitions in sup 185 Pt shape coexistence in sup 184 Pt and sup 187 Au A new type of picosecond lifetime measurement system capable of measuring the lifetime of states that decay only by internal conversion was developed and applied to the sup 186 188 Tl decay to determine the lifetime of the 0 sub 2 sup and 2 sub 2 sup deformed states in sup 186 188 Hg A search for the population of superdeformed states in sup 192 Hg by the radioactive decay of sup 192 Tl was accomplished by using a prototype internal pair formation spectrometer

An Advanced Course in Modern Nuclear Physics J.M. Arias, M. Lozano, 2008-01-11 The eld of nuclear physics is entering the 21st

century in an interesting and exciting way On the one hand it is changing qualitatively since new experimental developments allow us to direct radioactive and other exotic probes to target nuclei as well as to spark extremely energetic nuclear collisions In parallel detector systems are of an impressive sophistication It is difficult to envisage all the discoveries that will be made in the near future On the other hand the applications of nuclear science and technology are broadening the limits in medicine industry art archaeology and the environmental sciences etc This implies that the public perception of our field is changing smoothly but drastically in contrast to former times where nuclear weapons and nuclear power plants were the dominant applications perceived by citizens Both aspects scientific dynamism and popular recognition should lead the field to an unexpected revival One of the consequences of the former could be that many brilliant students consider nuclear physics as an excellent field in which to acquire professional expertise Therefore one of the challenges of the international nuclear physics community is to try to make the field attractive That means simply being pedagogic and enthusiastic Thus as organisers of an already established summer school our contribution was to put an emphasis in this session on pedagogy and enthusiasm

Nuclear Spectroscopy and Reactions 40-A Joseph Cerny, 2012-12-02 Nuclear Spectroscopy and Reactions Part A covers information regarding the development of nuclear spectroscopy and its reactions while emphasizing in beam spectroscopy This part specifically covers concerns regarding accelerators specialized auxiliary equipment and measurement techniques for charged particles and gamma rays Organized into three major sections this book first discusses accelerators in low and intermediate energy nuclear physics and then covers electrostatic accelerators cyclotron and specialized accelerators The second section covers polarized beam and targets as well as on line mass separations The last section discusses the measurement of charged particle and gamma ray spectra including the detection of semiconductor radiation large NaI and charged particles This book is written to primarily benefit graduate students who are engaged in research that concerns nuclear spectroscopy
