Zoo-A-Logical Math Thomas Kearney,2012-04 The work for this book began with a course I created and taught called Animal Behavior I always knew that there was a strong magnetic bond between people and animals but it wasn't until I began working on my curriculum that I truly found out how strong this bond really was Millions of people young and old will visit zoos and aquariums each year People stand in front of the animals hypnotized by the every movement of the animal People seemed to be looking not just at the animal but almost as if they were looking inside these animals wondering and questioning about the lives of some of our most distant animal relatives In my classroom I found the exact same kinds of responses The discussions and questions of my students motivated me to share with you the lives and abilities of some of the most amazing living creatures in the world People realize that humans are also animals but the belief that we have superior intelligence and problem solving abilities makes us think we are far superior to all of the rest of our Animal World As I began to learn more and lead my student discussions I soon realized that maybe our intelligence was the only thing that we really did have in our superiority over the rest of our animal relatives I began to look into the idea of comparing humans to animals in a wide variety of behaviors and activities and soon a brand new window into the REAL world of animals began to open up I soon realized that even the most insignificant animals in our world were really superstars when compared to humans By using math we are able to truly get a comparison of animals and how they relate to our own human abilities As I began to create the problems and do the math it became very evident that I began to get the responses that I had hoped for I soon began to call these responses the Wow factor A number of times the teachers that have worked on the problems would actually go back and do the problems a second time because there has to be a mistake or no way that this can be true There were no mistakes and the math did not lie The math allowed us to look at the animals in a totally different way I hope that you too will be amazed and wowed by some of these amazing animals that we share our world with

Educational Technology and Polycontextual Bridging Eyvind Elstad,2016-08-18 Technology has become ubiquitous in nearly every contemporary situation while digital media have acquired considerable importance in the lives of young people Alongside their interest in digital media schooling constitutes a core component of the life of children and adolescents Youth s use of digital media creates tensions between traditions and expectations of renewal within the school The once sharp divide between school and leisure time is eroding How will the school as an institution relate to this comprehensive process of change known as the digital revolution How can the school build a bridge between the world of

youth and school material to enable students to learn in a new digital age This endeavor is named polycontextual bridging in this book What are the good examples of polycontextual bridging What novel educational goals can be achieved by net related activities when incorporated into the school and how can out of school learning be successfully framed by educational purposes These questions are addressed from different perspectives by several scholars in this book The chapters in this volume offer the most thorough up to date discussion on the challenges of technology use in school education In tackling the critical issues created by technology this book provides an important resource for student teachers teachers education scholars and those interested in a critical examination of digital expectations and experiences in school education This book is motivated by a pressing need to come to grips with the dilemmas caused by an apparent clash of learning cultures in the individual classroom in the schools in the education of teachers and in the institutions of teacher education The book is also a tribute to Gavriel Salomon and his research on the cognitive effects of media s symbol systems media and learning and the design of cognitive tools and technology afforded learning environments The book also contains his masterpiece It s not just the tool but the educational rationale that counts Further three internationally recognized experts Howard Gardner David Perkins and Daniel Bar Tal describe Salomon s remarkable academic contributions This book is an attempt to explicate illustrate and critically examine the idea of polycontextual bridging between youth s leisure cultures and school material to enable students to learn in a new digital age The authors do not present a common front on the complex question of the proper use of information and communication technology in the school but instead present a diversity of arguments and viewpoints The book is an attempt to raise questions and start a debate
