Simon, 2013-12-11 The book presents surveys describing recent developments in most of the primary subfields of General Topology and its applications to Algebra and Analysis during the last decade following the previous editions North Holland 1992 and 2002 The book was prepared in connection with the Prague Topological Symposium held in 2011 During the last 10 years the focus in General Topology changed and therefore the selection of topics differs from that chosen in 2002 The following areas experienced significant developments Fractals Coarse Geometry Topology Dimension Theory Set Theoretic Topology and Dynamical Systems **Handbook of Topological Fixed Point Theory** Robert F. Brown, 2005-06-10 This book will be especially useful for post graduate students and researchers interested in the fixed point theory particularly in topological methods in nonlinear analysis differential equations and dynamical systems The content is also likely to stimulate the interest of mathematical economists population dynamics experts as well as theoretical physicists exploring the topological dynamics Topologies on Closed and Closed Convex Sets Gerald Beer, 1993-10-31 This monograph provides an introduction to the theory of topologies defined on the closed subsets of a metric space and on the closed convex subsets of a normed linear space as well A unifying theme is the relationship between topology and set convergence on the one hand and set functionals on the other The text includes for the first time anywhere an exposition of three topologies that over the past ten years have become fundamental tools in optimization one sided analysis convex analysis and the theory of multifunctions the Wijsman topology the Attouch Wets topology and the slice topology Particular attention is given to topologies on lower semicontinuous functions especially lower semicontinuous convex functions as associated with their epigraphs The interplay between convex duality and topology is carefully considered and a chapter on set valued functions is included The book contains over 350 exercises and is suitable as a graduate text This book is of interest to those working in general topology set valued analysis geometric functional analysis optimization convex analysis and mathematical economics **Continuous Selections of Multivalued Mappings D.** Repovš, P.V. Semenov, 2013-04-17 This book is dedicated to the theory of continuous selections of multi valued mappings a classical area of mathematics as far as the formulation of its fundamental problems and methods of solutions are concerned as well as J_n area which has been intensively developing in recent decades and has found various applications in general topology theory of absolute retracts and infinite dimensional manifolds geometric topology fixed point theory functional and convex analysis game theory mathematical economics and other branches of modern mathematics The fundamental results in this theory were laid down in the mid 1950 s by E Michael The book consists of relatively independent three parts Part A Theory Part B Results and Part C Applications We shall refer to these parts simply by their names The target audience for the first part are students of mathematics in their senior year or in their first year of graduate school who wish to get familiar

with the foundations of this theory The goal of the second part is to give a comprehensive survey of the existing results on continuous selections of multivalued mappings It is intended for specialists in this area as well as for those who have mastered the material of the first part of the book In the third part we present important examples of applications of continuous selections We have chosen examples which are sufficiently interesting and have played in some sense key role in the corresponding areas of mathematics

USCO and Quasicontinuous Mappings L'ubica Holá, Dušan Holý, Warren Moors, 2021-10-25 This book presents two natural generalizations of continuous mappings namely usco and quasicontinuous mappings The first class considers set valued mappings the second class relaxes the definition of continuity Both these topological concepts stem naturally from basic mathematical considerations and have numerous applications that are covered in detail

Topological Fixed Point Theory of Multivalued Mappings Lech

Górniewicz,2013-11-11 This book is an attempt to give a systematic presentation of results and methods which concern the fixed point theory of multivalued mappings and some of its applications In selecting the material we have restricted ourselves to studying topological methods in the fixed point theory of multivalued mappings and applications mainly to differential inclusions Thus in Chapter III the approximation on the graph method in fixed point theory of multivalued mappings is presented Chapter IV is devoted to the homological methods and contains more general results e.g. the Lefschetz Fixed Point Theorem the fixed point index and the topological degree theory In Chapter V applications to some special problems in fixed point theory are formulated Then in the last chapter applications to differential inclusions are presented Note that Chapter I and Chapter II have an auxiliary character and only results connected with the Banach Contraction Principle see Chapter II are strictly related to topological methods in the fixed point theory In the last section of our book see Section 75 we give a bibliographical guide and also signal some further results which are not contained in our monograph The author thanks several colleagues and my wife Maria who read and commented on the manuscript These include J Andres A Buraczewski G Gabor A Gorka M Górniewicz S Park and A Wieczorek The author wishes to express his gratitude to P Konstanty for preparing the electronic version of this monograph *Advanced Mathematical Analysis and its Applications* Pradip Debnath,Delfim F. M. Torres,Yeol Je Cho,2023-10-17 *Advanced Mathematical Analysis and its Applications* presents state of the art developments in mathematical analysis through new and original contributions and surveys with a particular emphasis on applications in engineering and mathematical sciences New research directions are indicated in each of the chapters and while this book is meant primarily for graduate students there is content that will be equally useful and stimulating for faculty and researchers The readers of this book will require minimum knowledge of real complex and functional analysis and topology Features Suitable as a reference for graduate students researchers and faculty Contains the most up to date developments at the time of writing Convex and Set-Valued Analysis Aram V. Arutyunov,Valeri Obukhovskii,2016-12-05 This textbook is devoted to a compressed and self contained exposition of two important parts of contemporary mathematics convex and set valued analysis In the first part properties of convex sets the theory of separation convex functions and their differentiability properties of convex cones in finite and infinite dimensional spaces are discussed The second part covers some important parts of set valued analysis There the properties of the Hausdorff metric and various continuity concepts of set valued maps are considered The great attention is paid also to measurable set valued functions continuous Lipschitz and some special types of selections fixed point and coincidence theorems covering set valued maps topological degree theory and differential inclusions Contents Preface Part I Convex analysis Convex sets and their properties The convex hull of a set The interior of convex sets The affine hull of sets The relative interior of convex sets Separation theorems for convex sets Convex functions Closedness boundedness continuity and Lipschitz property of convex functions Conjugate functions Support functions Differentiability of convex functions and the subdifferential Convex cones A

Infinite-Dimensional Topology J. van Mill, 1988-12-01 The first part of this book is a text for graduate courses in topology In chapters 1-5 part of the basic material of plane topology combinatorial topology dimension theory and ANR theory is presented For a student who will go on in geometric or algebraic topology this material is a prerequisite for later work Chapter 6 is an introduction to infinite dimensional topology it uses for the most part geometric methods and gets to spectacular results fairly quickly The second part of this book chapters 7 the necessary background material is collected in chapter 1 or developed as needed One can look upon this book as a complete and self contained proof of Toruńczyk's Hilbert cube manifold characterization theorem a compact ANR X is a manifold modeled on the Hilbert cube if and only if X satisfies the disjoint cells property In the process of proving this result several interesting and useful detours are made

Handbook of Functional Equations Themistocles M. Rassias, 2014-11-18 As Richard Bellman has so elegantly stated at the Second International Conference on General Inequalities Oberwolfach 1978 There are three reasons for the study of inequalities practical theoretical and aesthetic On the aesthetic aspects he said As has been pointed out beauty is in the eye of the beholder However it is generally agreed that certain pieces of music art or mathematics are beautiful There is an elegance to inequalities that makes them very attractive The content of the Handbook focuses mainly on both old and recent developments on approximate homomorphisms on a relation between the Hardy Hilbert and the Gabriel inequality generalized Hardy Hilbert type inequalities on multiple weighted Orlicz spaces half discrete Hilbert type inequalities on affine mappings on contractive operators on multiplicative Ostrowski and trapezoid inequalities Ostrowski type inequalities for the Riemann Stieltjes integral means and related functional inequalities Weighted Gini means controlled additive relations Szász Mirakyan operators extremal problems in polynomials and entire functions applications of functional equations to Dirichlet problem for doubly connected domains nonlinear elliptic problems depending on parameters on strongly convex functions as well as applications to some new algorithms for solving general equilibrium problems inequalities for the Fisher's information measures financial networks mathematical models of mechanical fields in media with inclusions and holes

Fixed Point Theory for Decomposable Sets Andrzej Fryszkowski, 2004-08-05 Decomposable sets

since T R Rockafellar in 1968 are one of basic notions in nonlinear analysis especially in the theory of multifunctions A subset K of measurable functions is called decomposable if Q for all and measurable A This book attempts to show the present stage of decomposable analysis from the point of view of fixed point theory The book is split into three parts beginning with the background of functional analysis proceeding to the theory of multifunctions and lastly the decomposability property Mathematicians and students working in functional convex and nonlinear analysis differential inclusions and optimal control should find this book of interest A good background in fixed point theory is assumed as is a background in topology
