

Tableau Groups VS Sets

The difference between Tableau's Groups and Tableau Sets was something that confused me a little when first started with Tableau. Tableau groups seem pretty self-explanatory, but sets seemed a little complicated. Grouping in Tableau is grouping multiple members/values into several groups which will create a higher category of the dimension. Creating a set in Tableau is putting multiple values IN my a single set depending on a condition or by manually picking them. In a set you have two options, you are either in my set or out my set.

Tableau Group vs Set [What's the Difference between Tableau's Sets and Groups?]

<https://www.youtube.com/watch?v=a3SQPIHyofY>

We are going to start with a basic group. I am working with the Sample – Superstore data that comes with Tableau so you can follow along with me. First thing I am going to do is bring Sub-Category over so I can see what all the Sub-Categories are in the data. Now in this data, there is already a higher grouping of this field called Category but we going to act like this does not exist. Now that we have all the values out there let's go ahead and hold CTRL and select all the values we want to be in the first group. In this first group, I want to group the values Bookcases, Chairs, Furnishings and Tables. Once all of them are highlighted hover over one of the selected values and click on the paperclip that shows up in the dialog box.
