The Routledge Handbook of Gender Archaeology Marianne Moen,Unn Pedersen,2024-12-02 This volume presents a comprehensive overview of gender archaeology both theory and practice and contributes a substantial and definitive reference work by bringing together state of the art research theoretical overviews and the latest debates in the field Responding to the shifts in the theoretical landscape and the societal and political frameworks within which we produce our knowledge chapters create both a solid theoretical baseline which help readers grasp the significance of gender in archaeology as well as offer perspectives on how to engender produced knowledge about the past In line with recent focus on the shortcomings of gender and archaeological representation chapters also detangle academic discourse and popular representations in order to present novel ways of successfully negotiating the pitfalls of gendered ideas about past behaviours By encouraging novel ways of integrating theoretical perspectives with scrutiny of gender stereotypes

original empirical examinations of identity markers and behaviours and re examinations of static representations of identities through new lenses such as intersectional perspectives personhood and materiality debates the volume is theoretically rich and will simultaneously provide a necessary benchmark for future archaeological discourses Finally it will incorporate perspectives from researchers with diverse backgrounds and viewpoints to provide a truly comprehensive overview It will not shy away from engaging with politically contentious issues surrounding knowledge production but will include perspectives from researchers whose focus is less on feminist critiques and more on gender and identities Thus the volume bridges the two most prominent directions currently discernible within the focus area namely feminist re examinations on the one hand and research focused more on bodily practice and gendered experiences on the other

The Routledge Handbook of Gender Archaeology is an invaluable resource for students and researchers in gender archaeology as well as gender studies more widely

Cosmic Womb Chandra Wickramasinghe, Ph.D., Robert Bauval, 2017-12-19 Compelling evidence that life intelligence and evolution on Earth were seeded by comets and cosmic intelligence Explains how life first came from interstellar dust and comets and how later arrivals of cosmic dust and comets spurred evolution Explores the possibility that universal knowledge may be stored in human DNA and how ancient cultures may have known a way to retrieve this knowledge Reveals new discoveries about the dimensions of the Great Pyramid of Giza All ancient cultures link humanity's origins to the heavens The Egyptians for example were adamant that their ancestors came from the stars of Orion and Sirius Today however religion and science assert that life arose spontaneously here on Earth Did the ancients know our true cosmic origins Have they left us clues Expanding on the panspermia theory developed with the celebrated astronomer Sir Fred Hoyle namely that the building blocks of life were imported to Earth by comets in the distant past Chandra Wickramasinghe and Robert Bauval explore the latest findings in support of a cosmic origin for humanity They detail the astrobiological discoveries of organic molecules deep in space how microbes are incredibly resistant to the harshest conditions of space enabling the transfer of genes from one star system to another and the recent recovery of microorganisms from comets still in space They argue that the universe was born and preset with the blueprint of life and that the cosmos must be teeming with lifeforms far older and perhaps far more developed than us They show how life arrived on our planet in the form of interstellar dust containing alien bacteria approximately 3.8 billion years ago and how later comets meteoroids and asteroids brought new bacterial and viral genetic material which was vital for evolution Using the latest advances in physics cosmology and neuroscience the authors explore how universal knowledge may be stored in human DNA and cells and they postulate that ancient cultures such as the pyramid builders of Egypt and the temple builders of India may have known a way to retrieve this knowledge Sharing new discoveries from experienced architects engineers and mathematicians they show how the Great Pyramid is a three dimensional mathematical equation in stone bearing a potent message for humanity across time and space about who we are and where we come from
