*Neural Oscillations and Their Relationship with Multiple Cognitive Functions and Mental Disorders* Min Pu, Yuan-Wei Yao, Xuebing Li, Chuanliang Han, 2025-01-21 Neural oscillations serve as a vital biological bridge connecting the micro and macro levels of brain activity. These oscillations play significant roles in various cognitive behaviors including attention, memory, learning, language ability, and addiction, as well as various internal states such as anesthesia, sleep, emotion, and fatigue. Additionally, abnormal neural oscillations are recognized as potentially influential factors in the development of various mental disorders including attention deficit hyperactivity disorder, emotional disorders, schizophrenia, autism, bipolar disorder, depression, Parkinson's disease, and Alzheimer's disease. Numerous studies in recent years have focused on improving cognitive function and alleviating symptoms of mental diseases by regulating neural oscillations based on external physical fields like sound, light, electricity, magnetism, or some non-drug therapy methods like sports exercise. However, the understanding of the mechanism behind neural oscillations and their functional role in varying cognitive functions and mental diseases is still limited. This Research Topic primarily focuses on scientific issues associated with the neural mechanisms of neural oscillations and their applications in cognitive functions and the transformation of psychiatric disorders. Our scope is not limited to human subjects; we also welcome animal experiments conducted on various species such as *Drosophila*, zebrafish, rodents, felines, and non-human primates. Additionally, our Research Topic is also not limited to data collection solely via the neuroelectrophysiology method. Multimodal research is encouraged, integrating EEG with fMRI or TMS and combining electrical stimulation with EEG. We also encourage a variety of experimental methods such as the combination of optogenetics, electrophysiology in animal experiments. Studies utilizing computational models like computational psychiatry are also welcome.
