The Evolution of Rhythm Cognition: Timing in Music and Speech Andrea Ravignani, Henkjan Honing, Sonja A. Kotz, 2018-07-24 Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains

Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior

Berlin Calling Paul Hockenos, 2017-05-23 An exhilarating journey through the subcultures occupied squats and late night scenes in the anarchic first few years of Berlin after the fall of the wall Berlin Calling is a gripping account of the 1989 peaceful revolution in East Germany that upended communism and the tumultuous years of artistic ferment political improvisation and pirate utopias that followed It's the story of a newly undivided Berlin when protest and punk rock bohemia and direct democracy techno and free theater were the order of the day In a story stocked with fascinating characters from Berlin's highly politicized undergrounds including playwright Heiner Müller cult figure Blixa Bargeld of the industrial band Einstürzende Neubauten the internationally known French Wall artist Thierry Noir the American multimedia artist Danielle de Picciotto founder of Love Parade and David Bowie during his Ziggy Stardust incarnation Hockenos argues that the DIY energy and raw urban vibe of the early 1990s shaped the new Berlin and still pulses through the city today Just as Mike Davis captured Los Angeles in his City of Quartz Berlin Calling is a unique account of how Berlin became hip and of why it continues to attract creative types from the world over *Appleton's Booklovers Magazine*, 1903 **Subway Systems**
