professional weather forecasting practitioners professional users of weather forecasts and trainers will all find this new member of the RMetS Advancing Weather and Climate series a valuable tool Provides an end to end description of the weather forecasting process Clearly structured and pitched at an accessible level the book discusses the practical choices that operational forecasting centres have to make in terms of what numerical models they use and when they are run Takes a very practical approach using real life case studies to contextualize information Discusses the latest advances in the area including ensemble methods monthly to seasonal range prediction and use of nowcasting tools such as radar and satellite imagery Full colour throughout Written by a highly respected team of authors with experience in both academia and practice Part of the RMetS book series Advancing Weather and Climate *Weather and the XXVI Olympiad* Melvin R.
