**Los Alamos: Beginning of an Era, 1943-1945** Los Alamos Scientific Laboratory. Public Relations Office, 1974 *Los Alamos* Los Alamos Scientific Laboratory, Los Alamos Scientific Laboratory Public Relations Staff, 1992 Los Alamos, Beginning of an Era, 1943-1945, 1986 Los Alamos, 1979 **Los Alamos**, 1979 *Los Alamos* Los Alamos Scientific Laboratory, 1967 Historien om USAs udvikling af atombomben som satte et brat punktum p 2 verdenskrig **Los Alamos** Los Alamos Scientific Laboratory, U. S. Government, 2017-10-16 This is the story of one of the greatest scientific achievements of all time It is the story of the founding of the Los Alamos Scientific Laboratory and its successful secret mission to create the first atomic bomb the weapon that ended World War II This compilation also includes the extensive comments of Hans Bethe on the history of the hydrogen bomb in which he recounts his opposition to the development of the weapon Part One Starting Point Military and Scientific Realities of 1943 Military considerations had government make the decision by 1943 that an atomic bomb was desirable as a means for bringing World War II to an end Scientific considerations had governed the decision that an atomic bomb was probably feasible Technological considerations already being worried about though they were almost entirely in the realm of the unknown had made it obvious that the atomic bomb would not be built in a day or a month or a year The military picture was grim The USA was at war with Japan Germany and Italy American naval power had not yet recovered from the disaster at Pearl Harbor The Japanese had conquered the Philippines and Japanese naval power was at its height American soldiers were heavily engaged in North Africa and elsewhere The Germans had barely begun to suffer the reverses that would turn the tide of war against them They surrendered El Alamein late in 1942 and Stalingrad in 1943 German scientists were working no American knew how ineffectively toward an atomic bomb The scientific picture was exciting The phenomenon of uranium fission had been observed several years earlier and had been correctly interpreted before 1940 It was known that at least one kind of uranium nucleus would divide roughly in half upon absorption of a neutron and that this reaction liberated energy plus more neutrons In December 1942 a Chicago group under Enrico Fermi had succeeded in bringing about the world's first man made nuclear chain reaction a reaction in which the neutrons from fission caused further fission at a sustained level The technological picture was very nearly a blank so far as atomic bombs were concerned This was true not only because no one had ever tried to build an atomic bomb but because so much fundamental scientific research remained to be done before anyone ever could Enough was known already to suggest the magnitude of the task both scientifically and technologically It was known for instance that the essential fissionable material the heart of the bomb would be hard to prepare The Manhattan Project Sue Vander Hook, 2011-01-01 Explores events leading up to the top secret Manhattan Project during World War II key players involved their lives during the project the development and use of the atomic bomb its aftermath and its effects on society **The Nuclear Terrorism Threat** Brecht Volders, 2021-07-08 This book examines the threat of a terrorist organisation constructing and detonating a

nuclear bomb It explores the role and impact of the organisational design of a terrorist organisation in implementing a nuclear terrorism plot In order to do so the work builds on the organisational analogy between an assumed nuclear terrorism scenario and four case studies as follows the construction of the first atomic bombs at Los Alamos South Africa s Peaceful Nuclear Explosives PNE program Aum Shinrikyo s chemical biological armament activities and Al Qaeda s implementation of the 9 11 attacks Extrapolating insights from these case studies this book introduces the idea of an effectiveness efficiency trade off On the one hand it will be argued that a more organic organisational design is likely to benefit the effective implementation of a nuclear terrorism project On the other hand this type of organic organisational design is also likely to simultaneously constitute an inefficient way for a terrorist organisation to guarantee its operational and organisational security It follows then that the implementation of a nuclear terrorism plot via an organic organisational design is also likely to be an inefficient strategy for a terrorist organisation to achieve its strategic and political goals This idea of an effectiveness efficiency trade off provides us with a tool to strengthen the comprehensive nature of future nuclear terrorism threat assessments and sheds new light on the ongoing debates within the nuclear terrorism literature This book will be of particular interest to students of nuclear proliferation terrorism studies international organisations and security studies in general
