Jörg-Volker Peetz

Low Energy Electron Diffraction:

Surface Crystallography L. J. Clarke, 1985 Low Energy Electron Diffraction LEED is one of the most commonly used techniques for crystal surface characterization at the atomic level This book is designed to provide all the essential background information necessary to carry out surface crystallography using LEED

Development of an Ultrafast Low-Energy Electron Diffraction Setup Max Gulde, 2015-05-26 This book presents an Ultrafast Low Energy Electron Diffraction ULEED system that reveals ultrafast structural changes on the atomic scale The achievable temporal resolution in the low energy regime is improved by several orders of magnitude and has enabled the melting of a highly sensitive molecularly thin layer of a polymer crystal to be resolved for the first time This new experimental approach permits time resolved structural investigations of systems that were previously partially or totally inaccessible including surfaces interfaces and atomically thin films It will be of fundamental importance for understanding the properties of nanomaterials so as to tailor their properties

Low Energy Electron Diffraction J. B. Pendry, 1974 [Low-Energy Electron Diffraction](#)

Michel A. VanHove, William Henry Weinberg, Chi-Ming Chan, 2012-12-06 Surface crystallography plays the same fundamental role in surface science which bulk crystallography has played so successfully in solid state physics and chemistry The atomic scale structure is one of the most important aspects in the understanding of the behavior of surfaces in such widely diverse fields as heterogeneous catalysis microelectronics adhesion lubrication corrosion coatings and solid solid and solid liquid interfaces Low Energy Electron Diffraction or LEED has become the prime technique used to determine atomic locations at surfaces On one hand LEED has yielded the most numerous and complete structural results to date almost 200 structures while on the other LEED has been regarded as the technique to beat by a variety of other surface crystallographic methods such as photoemission SEXAFS ion scattering and atomic diffraction Although these other approaches have had impressive successes LEED has remained the most productive technique and has shown the most versatility of application from adsorbed rare gases to reconstructed surfaces of semiconductors and metals to molecules adsorbed on metals However these statements should not be viewed as excessively dogmatic since all surface sensitive techniques retain untapped potentials that will undoubtedly be explored and exploited Moreover surface science remains a multi technique endeavor In particular LEED never has been and never will be self sufficient LEED has evolved considerably and in fact has reached a watershed

Low Energy Electron Diffraction The Open The Open Courses Library, 2019-12-04 Low Energy Electron Diffraction Physical Methods in Chemistry and Nano Science Low energy electron diffraction LEED is a very powerful technique that allows for the characterization of the surface of materials Its high surface sensitivity is due to the use of electrons with energies between 20 200 eV which have wavelengths equal to 2.7087 comparable to the atomic spacing Therefore the electrons can be elastically scattered easily by the atoms in the first few layers of the sample Its features such as little penetration of low energy electrons have

positioned it as one of the most common techniques in surface science for the determination of the symmetry of the unit cell qualitative analysis and the position of the atoms in the crystal surface quantitative analysis Chapter Outline History Davisson and Germer experiment Principles and diffraction patterns LEED experimental equipment LEED applications The Open Courses Library introduces you to the best Open Source Courses

Low-Energy Electron Scattering from Molecules, Biomolecules and Surfaces Petr Carsky, Roman Curik, 2016-04-19 Since the turn of the 21st century the field of electron molecule collisions has undergone a renaissance The importance of such collisions in applications from radiation chemistry to astrochemistry has flowered and their role in industrial processes such as plasma technology and lighting are vital to the advancement of next generation devices F *Low-energy Electron Diffraction Investigation of Epitaxial Growth*, 1990 We investigate the epitaxial growth of Pt and Pd and Pd 100 via spot profile analysis using conventional low energy electron diffraction LEED We resolve a central spike and diffuse component in the spot profiles reflecting the layer occupations and pair correlations respectively Kinetic limitations inhibit layer by layer growth at low temperatures Our data suggest diffusion switches on at ca 150 K for Pt and ca 170 K for Pd indicating activation barriers to surface diffusion of ca 10 and ca 13 kcal mol respectively To clarify the role of diffusion in determining the resulting film morphology we develop a growth model that incorporates the adsorption site requirement and predicts intensity oscillations We present a new procedure to experimentally determine out of phase scattering conditions At these energies ring structure is evident in the profiles during Pd growth between ca 200 and 400 K We report ring intensity oscillations as a function of coverage which demonstrate the filling of individual layers Extending the Range of Low Energy Electron Diffraction (LEED) Surface Structure Determination David Franklin Ogletree, 1986 *An Experimental Investigation of LEED [i.e. Low-energy Electron Diffraction] at Intermediate Pressures* Michael James O'Driscoll, 1969 Low Energy Electron Diffraction k David H. Templeton, 1968 *Principles of Colloid and Surface Chemistry, Third Edition, Revised and Expanded* Paul C. Hiemenz, Raj Rajagopalan, 1997-03-18 This work aims to familiarize students with the fundamentals of colloid and surface science from various types of colloids and colloidal phenomena and classical and modern characterization measurement techniques to applications of colloids and surface science in engineering technology chemistry physics and biological and medical sciences The Journal of Textile Studies proclaims High praise from peers contains valuable information on many topics of interest to food rheologists and polymer scientists The book should be in the libraries of academic and industrial food research organizations and Chromatographia describes the book as an excellent textbook excellently organised clearly written and well laid out Refinements in the Theoretical and Experimental Treatments of Low-energy Electron Diffraction (LEED) as Applied to the Clean Single Crystal Molybdenum Surface, Mo(100). Gerard B. Olszewski, 1982 **Auger Electron Spectroscopy** Donald T. Hawkins, 2012-12-06 Auger electron spectroscopy is rapidly developing into the single most powerful analytical technique in basic and applied science for investigating the chemical and structural properties of solids

Its explosive growth beginning in 1967 was triggered by the development of Auger analyzers capable of detecting one atom layer of material in a fraction of a second. Continued growth was guaranteed firstly by the commercial availability of apparatus which combined the capabilities of scanning electron microscopy and ion mill depth profiling with Auger analysis and secondly by the increasing need to know the atomistics of many processes in fundamental research and engineering applications. The expanding use of Auger analysis was accompanied by an increase in the number of publications dealing with it. Because of the developing nature of Auger spectroscopy the articles have appeared in many different sources covering diverse disciplines so that it is extremely difficult to discover just what has or has not been subjected to Auger analysis. In this situation a comprehensive bibliography is obviously useful to those both inside and outside the field. For those in the field this bibliography should be a wonderful time saver for locating certain references in researching a particular topic or when considering various aspects of instrumentation or data analysis. This bibliography not only provides the most complete listing of references pertinent to surface Auger analysis available today but it is also a basis for extrapolating from past trends to future expectations.

Reflection High-Energy Electron Diffraction and Reflection Electron Imaging of Surfaces P.K. Larsen, P.J. Dobson, 2012-12-06. This volume contains the papers presented at the NATO Advanced Research Workshop in Reflection High Energy Electron Diffraction and Reflection Electron Imaging of Surfaces held at the Koningshof conference center Veldhoven the Netherlands June 15-19 1987. The main topics of the workshop: Reflection High Energy Electron Diffraction RHEED and Reflection Electron Microscopy REM have a common basis in the diffraction processes which high energy electrons undergo when they interact with solid surfaces at grazing angles. However while REM is a new technique developed on the basis of recent advances in transmission electron microscopy RHEED is an old method in surface crystallography going back to the discovery of electron diffraction in 1927 by Davisson and Germer. Until the development of ultra high vacuum techniques in the 1960s made instruments using slow electrons more accessible RHEED was the dominating electron diffraction technique. Since then and until recently the method of Low Energy Electron Diffraction LEED largely surpassed RHEED in popularity in surface studies. The two methods are closely related of course.

each with its own specific advantages The grazing angle geometry of RHEED has now become a very useful feature because this makes it ideally suited for combination with the thin growth technique of Molecular Beam Epitaxy MBE This combination allows in situ studies of freshly grown and even growing surfaces opening up new areas of research of both fundamental and technological importance
